FY 1999 RDT&E, ARMY
PROGRAM ELEMENT DESCRIPTIVE SUMMARIES

INTRODUCTION AND EXPLANATION OF CONTENTS

1. General. This section has been prepared for the purpose of providing information concerning the Army Research, Development, Test and Evaluation program. The Descriptive Summaries are comprised of R-2 (Budget Item Justification Sheet) and R-3 (RDT&E Program Element/Project Cost Breakdown) Exhibits which provide narrative information on all RDT&E program elements and projects for the FY 1997, 1998 and 1999 time period.

2. Relationship of the FY 1999 Budget Submission to the FY 1998 Budget submitted to Congress. This paragraph provides a list of program elements restructured, transitioned, or established to provide specific program identification.

A. Program Element Restructures. Explanations for these changes can be found in the narrative sections of the Program Element R-2/R-3 Exhibits.

COST (In Thousands)		FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost		
D976 Army Threat Simulator Program		11146	16480	11935	14009	14309	16864	16856	Continuing	Continuing		
<p>A. Mission Description and Budget Item Justification: This program finances the design, fabrication, integration and fielding of realistic mobile threat simulators in support of Army training and developmental/operational testing. It provides the capabilities required to create realistic simulated tactical environments essential to user training and weapon system testing. Each capability is pursued in concert with the others so as to avoid duplication while providing the proper mix of test resources needed to support both Army and Tri-Service testing requirements. The development of the XM17S will be initiated in FY 98. The XM17S simulator represents an advanced air defense system for testing of U.S. weapon systems. It is highly mobile and very effective against low altitude targets and supports all U.S. electronic countermeasures development and operational tests including tactics evaluation. This is the only proposed simulation of a multiple target tracking system with enhanced low-altitude performance. This system is a very high value battlefield target and the simulator will support targeting evaluation as well as threat testing. The Army Threat Simulator Program (ATSP) is a continuing program which finances development of realistic mobile threat simulators for Army test organizations. These battlefield simulators represent systems (e.g. missile systems; command, control and communications systems; electronic warfare systems; helicopters; etc.) that are used to portray a realistic threat environment during testing of U.S. weapon systems. Simulator development is responsive to Office of the Secretary of Defense and General Accounting Office concerns that the Army conduct operational testing in a realistic threat environment. Initially created to develop simulators of Soviet equipment, the changing world order has expanded the scope of this program to address rest of world (ROW) threats. Actual threat equipment is being acquired when appropriate in lieu of development. Total package fielding will still be required (i.e., instrumentation, operations and maintenance, manuals, new equipment training, etc.). Threat simulator development is accomplished under the auspices of the Project Manager for Instrumentation, Targets, and Threat Simulators (PM ITTS), and CROSSBOW, which is administered by the Director for Test, Systems Engineering and Evaluation, Office of the Secretary of Defense (OSD). These affiliations eliminate any duplication within the U.S. Army or Department of Defense (DoD). Includes research and development effort directed toward support of installations or operations required for general research and development use and therefore is appropriate to Budget Activity 6.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> • 5843 Continued development of XM15A/S Air Defense System • 1717 Completed development of the XM330ES Advanced/Electronic Combat Systems. • 1050 Developed an Advanced/Land Combat System the low energy laser XMDEWS hardware simulator. • 2536 Continued development of regimental elements of XMC3S for the Battle Management Network. <p>Total 11146</p>

Mission Description and Budget Item Justification: This program funds aerial and ground target hardware and software target development, maintenance and upgrade. The overall objective is to allow validation of weapon system accuracy and reliability by developing aerial and ground targets essential for Test and Evaluation (T&E). These targets are economical and expendable, remote controlled or stationary, and often destroyed in use. The Army is the Tri-Service lead under Reliance for providing both rotary wing, mobile ground and assigned legacy targets for test and evaluation. The Army executes development of some Service-peculiar target requirements in support of quality assurance, lot acceptance and training; and continues development of Service-peculiar and previously begun target materiel to maintain continuity. Funding for this program includes research and development effort directed toward support of installations or operations required for general research and development use and therefore is appropriate to Budget Activity 6.

D238	Aerial Targets	6395	6416	5595	5696	6278	6799	6609	Continuing	Continuing		
<p>A. Mission Description and Budget Item Justification: Project D238 - Aerial Targets: Provides for development, acquisition, operation, storage, update, and maintenance of realistic surrogate or acquired threat high-performance, multi-spectral aerial targets that can fully stress the latest air defense and air-to-air weapons. Modern weapons require test, evaluation, and training using threat representative aerial targets to assess their effectiveness on the battlefield. This program encompasses a family of rotary and fixed-wing targets, full-scale, miniature and subscale targets, tactical ballistic targets, ancillary devices, and remote control systems. To stress systems under test, aerial targets must have flight characteristics, signatures, and other performance factors which emulate the modern threat. This tasking includes long-range planning to determine future target needs and development of coordinated requirements documents; the management of target research, development, test and evaluation process; execution of the validation process to ensure that surrogate targets adequately represent the threat; development and acquisition of surrogate and acquired targets; and continuing maintenance, storage, and development/enhancements/update engineering services of the developed and acquired threat targets to ensure availability for the Test and Evaluation (T&E) customer. The US Army is the Reliance lead for rotary wing targets and the Tri-Service lead for procurement and enhancement of the MQM-107 Fixed Wing Target.</p>												
<p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> • 2190 Continued development of HOKUM-X Rotary wing Target (Canadian Cooperative Program). • 1095 Continued enhancement of the MQM-107 Target System, including updating of obsolete parts and improved engine performance. • 1503 Continued development of Universal Drone Control System (UDCS), including integration into AH-1 helicopter. • 717 Continued enhancement of the Target Tracking and Control System (TTCS), including conversion of data panels to graphic CRTs and development of multi-target capability. • 570 Continued development, enhancement, maintenance, and storage for all RDT&E aerial targets, towed targets and ancillary devices. • 320 Developed aerial virtual targets activities. Includes models of HOKUM-X and AH-1 variants. Total 6395 												
<p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> • 2699 Continue development of HOKUM-X Rotary Wing (Canadian Cooperative Program). • 951 Continue enhancement of the MQM-107 Target System, including updating of obsolete parts and improved airframe maneuverability. • 1007 Complete development of Universal Drone Control System (UDCS). • 583 Continue development of the Target Tracking and Control System (TTCS), including development of GPS target positioning system. • 853 Continue development, enhancement, maintenance, and storage for all RDT&E aerial targets, towed targets and ancillary devices. • 166 Continue development of aerial virtual targets, including models of HOKUM-X and AH-1 variants. • 157 Small Business Innovative Research/Small Business Technology Transfer Programs Total 6416

D459	Ground Targets	3266	4912	7532	7238	7900	9435	8318	Continuing	Continuing	
<p>A. Mission Description and Budget Item Justification: Project D459 - Ground Targets: This program funds Army efforts to support Test and Evaluation (T&E) of advanced weapon systems by developing surrogates and acquiring foreign equipment, and developing virtual target computer models of ground vehicle targets. These computer models are compatible with Distributed Interactive Simulation (DIS) and will be Higher Level Architecture (HLA) compliant. These products are required to adequately stress weapons systems undergoing test and evaluation. This tasking includes long-range planning to determine future target needs and development of coordinated requirement documents; the centralized management of the ground target research, development, test and evaluation process; execution of the validation process; acquisition of foreign equipment; and continuing maintenance, storage, and development/enhancement/update engineering services of the developed and acquired targets to ensure availability for test and evaluation customers. Project also manages use of current assets and operates centralized spare parts program. The US Army is the Tri-Service lead for providing ground targets for test and evaluation. The increase in FY 99 provides the ground target surrogate vehicles required to support Comanche and BAT testing in the FY00-FY02 timeframe. These up-to-date threat representative ground targets are acquired at a greatly reduced unit cost over buying the authentic Russian vehicles.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> • 1632 Managed and provided oversight for Primary Operating Centers operation, storage, maintenance, configuration management and repair of Ground Targets assets including acquisition of new material and spare parts. • 129 Continued validation, accreditation, and certification and configuration controls/studies of ground targets and development/execution of safety and environmental plans. • 414 Continued development of virtual ground targets to support test and evaluation. Initiate development of a configuration control plan for the virtual target models which have been developed to date and for those to be developed. Target models will be utilized in Virtual Proving Ground activities and other weapon systems T&E and Modeling and Simulation (M&S) activities. • 870 Completed the development and testing of initial BMP3-S prototype armored infantry vehicle. • 221 Completed concept exploration of a Main Battle Tank Surrogate. Total 3266 <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> • 1911 Manage and provide oversight for Primary Operating Centers operation, storage, maintenance, configuration and repair of Ground Targets assets including acquisition of new material and spare parts. • 139 Continue validation, accreditation, and certification and configuration controls/studies of ground targets and development/execution of safety and environmental plans.

BUDGET ACTIVITY	PE NUMBER AND TITLE 0604258A Target Systems Development	PROJECT D459
6 - Management and Support		
FY 1998 Planned Program: (continued)		
• 1312	Continue development of virtual ground targets to support T&E. Develop two new virtual target models of a classified target and the BMP3-Surrogate target for use by developers and testers. Continue development and initiate implementation of configuration control plan for virtual targets. These target models will be utilized in Virtual Proving Ground activities and other weapon systems T&E and M&S activities.	
• 851	Develop and prototype a Main Battle Tank Surrogate.	
• 579	Complete development of second BMP-3S prototype.	
• 120	Small Business Innovative Research/Small Business Technology Transfer Programs	
Total	4912	
FY 1999 Planned Program:		
• 1748	Manage and provide oversight for Primary Operating Centers operation, storage, maintenance, configuration management of repair of Ground Targets assets including acquisition of new material and spare parts.	
• 190	Continue validation, accreditation, and certification and configuration controls/studies of ground targets and development/execution of safety and environmental plans.	
• 1854	Continue development of virtual ground targets to support test and evaluation. Implement configuration control and initiate validation efforts. Target models will be utilized in Virtual Proving Ground and other weapon systems T&E and M&S activities.	
• 1265	Continue development and prototype of a Main Battle Tank surrogate.	
• 2475	Complete testing of BMP3-S and fabricate and deploy, into the operational fleet, 10 BMP3-S Ground Target Surrogates to maintain up-to-date threat representative targets which are required to support Comanche and BAT T&E in the FY00 and FY-02 timeframe.	
Total	7532	
GROUND TARGETS Test Programs Supported: Ground Targets efforts are investments which enable Department of Defense (DoD) customers to conduct appropriate developmental and operational testing, evaluation and training in the future. Weapon systems for which these developments are required include: Comanche, Longbow, Close Combat Anti-Armor Weapon System (CCAWS), Wide Area Munitions (WAM), Non-Line of Sight (NLOS) Enhanced Fiber Optic Guided Missile (EFOGM), Line-Of-Sight Antitank (LOSAT), Army Tactical Missile System (Army TACMS), Brilliant Anti-Armor Submunition (BAT), Unmanned Aerial Vehicle, (UAV-SR), Short Range Anti-Armor Weapon System (SRAW), Javelin, Sense and Destroy Armor (SADARM).

Mission Description and Budget Item Justification: This program funds development and acquisition of major developmental test instrumentation for the U. S. Army Test and Evaluation Command (TECOM) test activities including Major Ranges and Test Facility Bases (MRTFB): White Sands Missile Range (WSMR), NM; Yuma Proving Ground, (YPG), AZ; Aberdeen Test Center (ATC), MD; Dugway Proving Ground (DPG), UT; and US Army Kwajalein Atoll (USAKA), Marshall Islands (which is managed by the U.S. Army Space and Missile Defense Command). Program also funds development and acquisition of major field instrumentation for U. S. Army Operational Test and Evaluation Command (OPTEC) test organizations. Requirements for instrumentation are identified through a long range survey of project managers; Research, Development and Engineering Centers (RDECs); and Battle Laboratories developing future weapon systems and the test programs required for these systems. Army testing facilities are also surveyed to determine current testing capability shortfalls. This PE is appropriate to Budget Activity 6 because it includes research and development effort directed toward support of installations or operations required for general research and development use.

COST (In Thousands)		FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
D983	Major Test & Evaluation - USAKA	2315	2355	7142	7086	4163	4145	4106	Continuing	Continuing
<p>A. Mission Description and Budget Item Justification: Project D983 - Major Test and Evaluation (T&E) Investment - USAKA: This project funds the purchase of major improvement and modernization (I&M) equipment at the US Army Kwajalein Atoll/Kwajalein Missile Range (USAKA/KMR) in the Marshall Islands. USAKA/KMR is a national test range supporting Army, Ballistic Missile Defense Organization (BMDO), US Air Force, National Aeronautics and Space Administration (NASA), and other customers. Upgrades to telemetry, optics, command/control and other equipment are required to maintain USAKA as a national test range. FY 1999-2000 increase supports the KMR Modernization project - Remoting Roi Operations which is a concurrent, range-wide modernization effort to maximize the use of common, standardized Commercial Off-The-Shelf (COTS) technology to replace obsolete components; implement common hardware/software architectures and automation; and "remote" the operation of range sensors and instrumentation to the island of Kwajalein. This effort will upgrade range capabilities that are critical to the success of upcoming Theater Missile Defense (TMD) and National Missile Defense (NMD) test missions as well as reduce USAKA/KMR annual operating costs by \$17M per year beginning in FY02. These savings are already reflected in USAKA PE 0605301A.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> • 1754 Advanced Research Project Agency-Lincoln C-Band Observable Radar (ALCOR) Computer/Receiver Upgrade. The ALCOR computer/receiver upgrade is required to improve performance, increase system reliability and reduce maintenance costs. • 561 Kwajalein Missile Range (KMR) Impact Scoring System: Completed KMR Impact Scoring System (KMISS), an underwater hydroacoustic system which replaces the unsupportable splash detection radars. This system will support the Air Force Minuteman III and Peacekeeper Operational Testing. <p>Total 2315</p> <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> • 2296 Kwajalein Missile Range (KMR) Modernization - Remoting Roi Operations. All radar signal processing and recording projects will be consolidated into a single common open architecture using general purpose COTS hardware to enable remote operations and maintenance by matrixed technicians. The Kiernan Reentry Measurement Site (KREMS) radars, the AN/FPQ-19 radar, and telemetry will be remoted to the Kwajalein Mission Control Center (KMCC) where automated remote operation will be performed. Transportable optics will be used to supplement current KMR optics. The KMR Range Safety Center will be consolidated into the KMCC. • 59 Small Business Innovative Research/Small Business Technology Transfer Program. <p>Total 2355</p> <p>FY 1999 Planned Program:</p> <ul style="list-style-type: none"> • 7142 Continue KMR Modernization - Remoting Roi Operations, which is critical to upcoming TMD/NMD test missions. Remoting Roi Operations will reduce USAKA/KMR operating costs by \$17M per year. <p>Total 7142</p> <p>Project D983</p>

D984	Major Technical Test Instrumentation	30595	33450	30562	28365	30732	36009	42134	Continuing	Continuing		
<p>A. Mission Description and Budget Item Justification: Project D984 - Major Technical Test Instrumentation: This project develops and acquires major test instrumentation to perform developmental testing of weapon systems at U. S. Army Test and Evaluation Command (TECOM) activities. Major instrumentation is defined as having one or more of the following attributes: joint-service requirements, multiple command use, high visibility, large dollar value, produces a new capability or requires intensive management during acquisition. The Test Support Network (TSN) will provide complete secure coverage of automated and integrated voice, data and video in a single transport system; provide advanced encryption capabilities and remote control for switching capabilities for test configuration and total network data arrangement control. The Land Combat Instrumentation (LCI) provides for upgrade and expansion for Aberdeen Test Center's (ATC) suite of instrumentation required for performance testing of combat and tactical vehicles, advanced armor concepts, and advanced munitions. The Fiber Optic Network (FON) provides ATC instrumented test areas with high-speed communication links to other test facilities and to central data processing/evaluation. The Frequency Surveillance System (FSS) will replace and provide remote capabilities to daily operations for surveillance of the radio frequency spectrum used at White Sands Missile Range (WSMR) in support of all Services and non-DoD agencies. The Dynamic Infrared Scene Projector (DIRSP) will conduct performance testing of night vision sensors and Infrared (IR) imaging seekers, and will provide the capability to fully simulate and synthesize present and future battlefields with a mix of real and simulated objects at Redstone Technical Test Center (RTTC) centers. The Hardened Subminiature Telemetry and Sensor System (HSTSS) is developing, miniaturizing, and hardening an instrumentation/telemetry package that will provide continuous direct measurement of internal functioning and flight data for cannon-launched munitions, smart submunitions, and small missiles/rockets. The Range Digital Transmission System (RDTS) will improve test operations and will reduce test costs allowing for efficient data collection and remote operations at YPG.</p>												
<p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> 2530 Concluded the Army's portion of the GPS production contract for all Army test organizations. 223 Concluded enhancements to databases and data handling capabilities for system level ATCCS Technical Control Center (TCC) EPLRS, and SINCGARS technical test at EPG. 10435 Completed the 2nd segment and nearing completion of the 3rd segment of the Eastern Fiber Optic Backbone of Phase I of TSN. Continued installation of the Network Management System (NMS). Continued inside plant hardware site surveys for seven major nodes. 4875 Completed installation of PTA instrumentation, completed laser illuminator system, completed Barricade B2 and B3 range instrumentation, and completed development of vehicle on-board data acquisition and sensors for LCI at ATC. Started upgrade to Hi Velocity Range and Barricade C. 1498 Completed the instrumentation of the TW II Link, high-speed networking, and Ethernet hub. Completed Hi Velocity Range installation. Continued Secure the FON for classified data transmission at ATC. 4771 Awarded contract for FSS modernization project at WSMR. Purchased equipment for WSMR control center and Jess remote site. 4040 Continued development of the DIRSP project at RTTC, designing critical subsystems and conducting Preliminary Design Review (PDR) and Critical Design Review (CDR). 2085 Completed Test Capabilities and Benefits Analysis (TCBA), and system specification for HSTSS. Conducted Milestone I/II in-process review.

RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)		DATE	February 1998
BUDGET ACTIVITY	PE NUMBER AND TITLE	PROJECT	
6 - Management and Support	0604759A Major Test and Evaluation Investment	D984	
FY 1997 Accomplishments continued:			
• 138	Started developing the statement of work and system specification for Range Digital Transmission system.		
Total	30595		
FY 1998 Planned Program:			
• 10024	Complete installation and acceptance testing of the NMS and initiate the system integration and testing (software qualification) of the NMS which will support the Initial Operating Capability (IOC) for the WSMR TSN. Complete Phase I of the Eastern Fiber Optic Backbone. Complete inside plant hardware site surveys and install inside plant hardware for the four major nodes on the green ring.		
• 2727	Continue Barricade C and Hi Velocity range instrumentation; continue installation of automotive communication network at Churchville test area, and start direct fire imager development for LCI at Aberdeen Test Center.		
• 1404	Complete installation of fiber optic data link to Mainfront, Michaelsville, Fords Farm, AAS, and Poverty Island testing ranges for FON at ATC. Also complete securing the fiber optic network.		
• 10608	Install, integrate, test and perform site acceptance of equipment for FSS at WSMR control center and Jess remote site. Purchase equipment for Holloman control center, Higbie remote site and Sacramento Peak remote site.		
• 3570	Start fabrication of full up system, and start system integration for the DIRSP project at RTTC.		
• 4258	Released request for proposal (RFP). Started source selection activities for Data Acquisition System, GPS/IMU Systems and Packaging Studies. Award multiple EMD contracts for HSTSS instrumentation for indirect/direct fire projectiles and small missiles/medium caliber munitions in support of Yuma Proving Ground (YPG) and the Army Research Lab (ARL). Release multiple RFPs and begin source selection activities for the EMD contract for HSTSS instrumentation .		
• 50	Complete development of the statement of work and system specification for Range Digital Transmission System.		
• 809	Small Business Innovative Research/Small Business Technology Transfer Programs.		
Total	33450		
FY 1999 Planned Program:			
• 14900	Complete Phase I to include inside plant hardware installation for the three major nodes on the pink ring, system integration and testing to support IOC and install breakout and feeder sites to support Phase II efforts of WSMR TSN.		
• 250	Continue installation of Automotive Communication Network at Churchville test area at Aberdeen Test Center.		
• 6874	Install, integrate, test and perform site acceptance of equipment for FSS at White Sands Missile Range Holloman control center, Higbie remote site and Sacramento Peak remote site for FSS. Purchase equipment for Ft Bliss and Kirtland remote sites.		
• 3781	Complete DIRSP system integration and testing to meet IOC and field system to RTTC.		
• 4147	Complete source section activities and award multiple EMD contracts for Data Acquisition System and GPS/IMU Systems in support of HSTSS instrumentation for indirect/direct fire projectiles and small missiles/medium caliber munitions.		
• 610	Initiate installation of digital fiber optic cable to support Phase I of RDTSS for the Yuma Cibola western test ranges.		
Total	30562

COST (In Thousands)		FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost	
D986 Major User Test Instrumentation		6788	3395	2580	4814	7066	9194	9662	Continuing	Continuing	
<p>A. Mission Description and Budget Item Justification: Project D986 - Major User Test Instrumentation: This project finances the development of major field instrumentation for Operational Testing (OT), Force Development Testing and Experimentation (FDTE), and Army Warfighting Experiments (AWE). Each initiative set forth in this program element is directly tied to tactical systems that support each of the five Army Modernization Objectives: Project & Sustain; Protect The Force; Win Information War; Conduct Precision Strikes; and Dominate The Maneuver Battle. Cornerstone is the Mobile Automated Instrumentation Suite (MAIS) that provides users a high fidelity, realistic, real-time capability to measure the performance of hardware and personnel under tactical conditions for large-scale operations (up to 1830 players). The MAIS will instrument combat systems in the operational forces to provide encrypted Real Time Casualty Assessment (RTCA) and Time, Space, and Positioning Information (TSPI) data. The MAIS system and its data are the tools that will enable objective assessments for new materiel acquisition, force structuring, doctrine and tactics modification, and, through the High Level Architecture (HLA) Protocol Data Unit (PDU) format provide data to validate the future DoD warfighting models and simulations, bridge the test analysis centers, and link multi-Service test and training exercises. The MAIS, a non-major system acquisition, achieved Milestone I/II in FY90. Current program (one control center and 131 player units) reaches IOC in FY97. One additional control center and 469 player units are programmed in Other Procurement, Army. Beginning in FY 97, enhancements to the MAIS program are Mobile Integrated Non-Intrusive Command, Control and Communications Instrumentation (MINI C3I). The MINI C3I system assesses the 21st Century's Armed Forces' ability to employ digital technology to obtain greater performance standards in lethality, survivability and tempo. It provides essential audio, video, and digital information required for credible testing of command, control, and communications systems. Beginning in FY98 a MAIS Pre-Planned Product Improvement (P3I) program will be initiated with instrumentation packages for the Longbow Apache helicopter, Comanche, Crusader, Bradley Stinger, Smart Weapons/Munitions, and Land Warrior weapons. MAIS P3I will provide insertion of enhancements to the RTCA algorithms; simulation of Opposing Force (OPFOR) weapons systems and player units for newly acquired weapons systems; and develop player units for the Comanche, Crusader, smart weapons, and antitank missile systems. These system enhancements are required as part of the basic program enabling the operational test community to effectively emulate current and future battlefield weapons in a high fidelity environment. The P3I program will develop and integrate additional weapon systems and capabilities to improve the fidelity and robustness of the MAIS system.</p>											
<p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> • 3028 Supported system Developmental and Operational Testing for MAIS. • 1654 Executed MAIS product refurbishment and component obsolescence program. • 850 Developed design alternatives for a MAIS interface to the AGES-II system implementation for the AH-64D Apache Longbow weapon system. • 770 Designed and fabricated for MINI C3I a miniature Field Data Collectors (FDC) to support Army Force XXI design decisions and operational test and experiments. • 486 Instrumented two additional mobile command and control vehicles for MINI C3I, each vehicle to include necessary instrumentation and hardware to collect digital, video and audio data to support the Command Post Exercise portion of the Division Army Warfighting Experiment supporting Force XXI.

BUDGET ACTIVITY		PE NUMBER AND TITLE								PROJECT	
6 - Management and Support		0605103A Rand Arroyo Center								D732	
COST (In Thousands)		FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost	
D732	Arroyo Center Support	20550	16534	16718	16868	17017	17137	17194	Continuing	Continuing	
<p>A. Mission Description and Budget Item Justification: This program funds the RAND Arroyo Center, the Department of the Army's Federally Funded Research and Development Center (FFRDC) for studies and analysis, which has operated at RAND since FY 1985. The Arroyo Center draws its researchers from RAND's staff of approximately 600 professionals trained in a broad range of disciplines. About 90 percent of RAND's staff are located at the corporate headquarters in Santa Monica, California; the remainder are based at RAND's Washington D.C. office. The RAND Arroyo Center provides for continuing analytical research across a broad spectrum of issues and concerns, which are grouped in four major research areas: Strategy and Doctrine; Military Logistics; Manpower and Training; and Force Development and Technology. The RAND Arroyo Center research agenda is primarily focused on mid/long-term concerns. Results and analytical findings directly impact senior leadership deliberations on major issues. Arroyo Center research is sponsored by the Secretary of the Army, the Assistant Secretaries, the Chief of Staff and Vice Chief of the Army, the Deputy Chiefs of Staff of the Army, and most of the Army's major commands. The Arroyo Center is provided guidance from the Army through the Arroyo Center Policy Committee (ACPC), which is co-chaired by the Vice Chief of Staff of the Army and the Assistant Secretary of the Army (Research, Development, and Acquisition). The ACPC reviews, monitors, and approves the annual Arroyo Center research plan as well as all individual research projects. Each project requires General Officer (or SES equivalent) sponsorship and involvement on a continuing basis. RAND Arroyo provides the Army with a unique multidisciplinary capability for independent analysis. Although the Arroyo Center staff works with analysts in the Army's internal study program, the Arroyo Center is an independent organization that provides analysis for both the Army and the broader national security community. Work in this program element is consistent with the resource constrained Army Science and Technology Master Plan (ASTMP), the Army Modernization Plan, and Project Reliance. This program supports decisionmaking and resource allocation for general research and development and, since it is not allocated to a specific R&D mission, it is appropriately funded in Budget Activity 6.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> • 766 Research addressing innovative ways to acquire affordable technologies. • 4166 Research addressing development and modernization, including ways to develop enhanced battle command decisionmaking; what communication technologies are required for the digital battlefield for Force XXI and the Army After Next (AAN); how to improve the Army's ability to analyze, model, and simulate the effects of information operations; assessing the potential of current, planned, and future capabilities for joint Operations Other Than War (OOTW) and wartime urban operations to decide which technology-based initiatives should be supported; assessing the utility of advanced technology system concepts for improving light-force capability; and providing help in developing Army guidance that will lead to an improved level of joint interoperability. • 3221 Research addressing Army planning, including providing a framework for thinking about how the Army should organize to facilitate future expansion; identifying investment and organizational development strategies to prepare for conflict with an Weapons of Mass Destruction (WMD) - armed adversary; measuring the effectiveness of an information-age Army; identifying strategies to maximize long-term effectiveness of forces deployed to various lesser conflicts; providing strategic analysis of the AAN winter war game; and determining the nature of sound intelligence support to long-range planning.

UNCLASSIFIED

RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)		DATE	February 1998
BUDGET ACTIVITY		PE NUMBER AND TITLE	PROJECT
6 - Management and Support		0605103A Rand Arroyo Center	D732
FY 1997 Accomplishments: (continued)			
•	1365	Research addressing manning the force, including identifying policies to manage personnel turbulence and minimize its detrimental effects on costs and readiness; developing and testing incentives to reduce reserve component personnel turbulence, thereby increasing unit readiness; and identifying and evaluating options for the Army to enhance efficiency in staffing and resourcing the ROTC program.	
•	2760	Research addressing training the force, including examining ways to improve the efficiency and performance of the Total Army School System; designing and recommending new and more flexible techniques for providing and managing training resources in schools; designing and testing next systems of training CSS command and control, focusing on improved use of simulation and exercises; analyzing ways to strengthen and modernize the system for educating and developing noncommissioned officers to meet the demands of the 21 st century Army; and enhancing training of heavy combat units by developing more effective ways to use simulations.	
•	1189	Research addressing the security environment, including providing new metrics to better assess state power in the information age; applying previously developed model of ethnic conflict and state breakdown to real-world case studies; and producing a range of plausible unification scenarios for the Koreans, focusing on both the military operational and broader regional implications of each.	
•	6125	Research addressing logistics initiatives, including helping the Army to develop and implement specific process improvements and institutionalize the capability to sustain continuous process improvement; improving CONUS and OCONUS order and ship processes; increasing responsiveness of the repair cycle process; improving the stockage determination process; improving the quality and usability of financial information needed for logistics decisionmaking; improving the deployment process for logistics capabilities; supporting Army efforts to field an integrated communications and information system for logistics to support both day-to-day operations and logistics command functions in garrison and in theater; and identify types of savings that can be accrued from implementing improvements to the logistics processes.	
•	958	Research done by the Warfighting Analysis Integration Center (WAIC) addressing analysis support for the Quadrennial Defense Review and the National Defense Panel.	
Total	20550		
FY 1998 Planned Program:			
•	1416	Research addressing the Army in national strategy, including identifying unique and significant Army contributions to the execution of future national military strategy; identifying the strength of the case for a stronger land-force emphasis in future U.S. engagement operations; conducting a parametric assessment of how costs affect Army expandability issues; and understanding the processes by which states translate sustained economic growth into military power.	
•	1297	Research addressing improving the Army PPBE System, including developing and extending strategies for streamlining the processes; extending assumption-based planning; developing strategic concepts and planning processes to revitalize long-range strategic planning; developing new analytic tools to support the development of strategic resource alternatives; assessing the appropriateness of the current programming structure used by DoD; and providing and integrating operational and institutional guidance for the programming phase of Army PPBS.

RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)		DATE	February 1998
BUDGET ACTIVITY	PE NUMBER AND TITLE	PROJECT	
6 - Management and Support	0605103A Rand Arroyo Center	D732	
FY 1998 Planned Program: (continued)			
• 2948	Research addressing Force XXI and Army After Next, including assisting the senior Army leadership in informing and influencing thinking in the broader defense community on operational concepts and technological applications for future forces; assisting in the design of the AAN winter and summer wargames; examining potential tactical and technological counters to the rapid force projection initiative system-of-systems concept; providing assistance in developing Army guidance leading to an improved level of joint and NATO interoperability; and developing concepts to explore U.S. military capabilities to conduct joint OOTW and wartime operations on urban terrain.		
• 1838	Research addressing the Army and its Title X responsibilities, including identifying near-term resourcing and management actions to sustain recruiting and reduce the force, and conducting a meta-analysis of existing and developing visions and strategic plans for logistics in 2005-2015 and beyond.		
• 3568	Research addressing shaping and staffing the force, including designing and testing new systems of training CSS command and control, focusing on improved use of simulations and exercises; enhancing training of heavy combat units by developing more effective ways to use simulations; developing an objective, longitudinal system as a tool for assessing proficiency on collection and individual tasks performed at CTCs; strengthening and modernizing the system for developing and educating NCOs; testing and evaluating alternative ROTC staff programs; and maintaining training effectiveness and readiness of Army units in the face of varying levels of OPTEMPO and PERSTEMPO.		
• 1449	Research addressing exploration of future force and technology alternatives, including maintaining science and technology capability necessary to meet AAN mission needs in period of reducing R&D funding; identify opportunities for exploiting information technologies by Army forces and reducing vulnerabilities to an adversary's use of information warfare; investigating current staff responsibilities for the management of the C2 Protect program; and improving the Army's ability to model, simulate, and analyze issues regarding the knowledge-based Army.		
• 3604	Research addressing reshaping support functions and infrastructure, including adjustments to the Army's price and credit policies to support logistics initiatives; identifying types of savings that can be accrued from implementing improvements; improving the quality and usability of financial information needed for logistics decisionmaking; improving the Army's CONUS and OCONUS order and ship processes; sizing and configuring stocks at all echelons to meet operational requirements responsively with lowest dollar investment; developing and implementing specific process improvements to sustain continuous process improvement; and increasing effectiveness and efficiency of logistics deployment capabilities.		
• 414	Small Business Research/Small Business Technology Transfer Programs		
Total	16534		
FY 1999 Planned Program:			
• 1468	Research on the Army in national strategy		
• 1346	Research on improving the Army PPBES system		
• 3057	Research on Force XXI and Army After Next		
• 1906	Research on the Army and its Title X responsibilities		
• 3700	Research on shaping and staffing the force		
• 1503	Research on exploring of future force and technology alternatives		
• 3738	Research on reshaping support functions and infrastructure

COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
D614 US Army Kwajalein Atoll	140078	120918	142710	142509	133693	130490	134329	Continuing	Continuing

A. Mission Description and Budget Item Justification: U.S. Army Kwajalein Atoll/Kwajalein Missile Range (USAKA/KMR) is a remote (located in the republic of the Marshall Islands), secure activity of the Major Range and Test Facility Base as constituted by DoD Directive 3200.11. Its function is to support test and evaluation of major Army and DoD missile systems, Army Space surveillance and object identification, and National Aeronautics and Space Administration (NASA) scientific and space programs. Programs supported include Army missile defense, Ballistic Missile Defense Organization (BMDO) demonstration/validation tests, Air Force Intercontinental Ballistic Missile (ICBM) development and operational tests, U.S. Space Surveillance Network, and NASA Space Transportation System (Shuttle) and orbital debris experiments. USAKA/KMR supports the Missile Defense Act of 1991 to put in place a Ground Based Defense System by 2006 or earliest date possible. The technical element of USAKA/KMR is the Kwajalein Missile Range which consists of a number of sophisticated, one-of-a-kind, radar, optical, telemetry, command/control/communications, and data reduction systems. These systems include the four unique radars of the Kiernan Reentry Measurement Site (KREMS); super Recording Automatic Digital Optical Tracker (RADOT) long range video-metric tracking systems, high density data recorders for high data-rate telemetry, and sonobuoy missile impact location system data analysis and reduction hardware and software. USAKA/KMR is contractor operated and is therefore totally dependent upon its associated support contractors. Program also provides funds for the contractors to accomplish installation operation and maintenance (O&M). The lean O&M funding for FY 1998 resulted in the delay of critical repair and replacement of facilities and equipment. The FY 1999-2000 funding increase provides for the minimum level of USAKA/KMR O&M as well as continuation of the KMR Modernization project - Remoting Roi Operations. The Remoting Roi Operations project is a concurrent, range-wide modernization effort to maximize the use of common, standardized Commercial Off-The-Shelf (COTS) technology to replace obsolete components; implement common hardware/software architectures and automation; and "remote" the operation of range sensors and instrumentation to the island of Kwajalein. This project will upgrade range capabilities that are critical to the success of upcoming Theater Missile Defense (TMD) and National Missile Defense (NMD) test missions as well as reduce USAKA/KMR annual operating costs by \$17M per year beginning in FY02. These savings are already reflected in USAKA's funding for FY2001-2003. The Army, Air Force, Navy and BMDO have programs planned which have significant test and data gathering requirements at USAKA/KMR. Air Force programs require firing at full range with complete data collection during late mid course and terminal trajectory. BMDO programs require range sensors to collect technical data in support of National Missile and Theater Missile Defense programs being conducted at USAKA/KMR. These test data cannot be obtained except through the use of technical facilities available on and in the vicinity of USAKA/KMR. Data collection on objects in space remains significant because the Advanced Research Project Agency (ARPA) Long-Range Tracking and Instrumentation Radar (ALTAIR), located at USAKA/KMR, is one of only three sensors world-wide that has deep-space tracking capability. Programs supported include Air Force programs Peacekeeper, Minuteman III, and Delta; Army/BMDO's Strategic Target System (STARS), Multi-Service Launch System (MSLS), Midcourse Space Experiment (MSX), Missile Defense Critical Measurements Program, Theater High Altitude Air Defense (THAAD), Patriot, and ground-based radar; NASA's Space Transportation System (STS), Orbital Debris Measurement Program, Small Expendable Deployer System and Orbital Debris Radar Calibration Spheres, along with the Air Force Space and Missile Center's associated programs. Funding is in support of site installations or operations required for general research and development, not allocable to specific R&D missions. This type of activity is appropriately funded in Budget Activity 6.

BUDGET ACTIVITY		PE NUMBER AND TITLE				PROJECT				
6 - Management and Support		0605326A Concept Experimentation Program				D308				
COST (in Thousands)		FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
D308	Concept Experimentation Program	0	0	17441	17580	17697	18465	18704	Continuing	Continuing

A. Mission Description and Budget Item Justification: Project D308 - Concept Experimentation Program: This is not a new start. Starting in FY 1999 the funds were realigned from PE 0605712A, Project D985. The Concept Experimentation Program (CEP) is a key innovative tool which provides TRADOC battle labs and schools the ability to capitalize on emerging technologies, emerging warfighting concepts, and new materiel initiatives. Program growth reflects increased emphasis on Force XXI initiatives and accelerated acquisition methods. Funds are used to acquire, lease or fabricate equipment to conduct experiments to determine military utility or potential to satisfy Army Doctrine, Training, Leader Development, Organization, Materiel and Soldiers (DTLOMS) needs. TRADOC battle labs build on initiatives with greatest potential payoff. Program is also used as a first look at emerging technologies and emerging warfighting concepts that have the potential to support the Army's Force XXI design needs. As the Army moves toward Force XXI, the critical task of designing the force around information requires major investment in information-age capabilities. Constructive, virtual, and live simulations are used to examine warfighting concepts across DTLOMS domains. They cover all aspects of command and control, lethality, survivability, and tempo and are essential to technology insertion in future Army systems and force structure.

Additionally, this project will fund continued Force XXI experimentation in accordance with the Joint Venture Experiment Campaign Plan. This plan will serve as the blueprint for experimentation to fine tune the organization of the First Digitized Division and First Digitized Corps

FY 1997 Accomplishments: Program funded under PE 0605712A, Project D985.

FY 1998 Planned Program: Program funded under PE 0605712A, Project D985.

FY 1999 Planned Program: Concepts to be conducted in FY 99 will be nominated during the summer 1998. They will be evaluated by the TRADOC Concept Experimentation Program Schedule and Review Committee (CEPSARC) during Aug/Sep 1998. The FY 99 concept experiments will be approved in Sep/Oct 1998. Approval during the year of execution allows proponents (Battle Labs, Schools, TOE Units, etc.) to submit proposals for up to date ideas and technology for evaluation.

NOTE: Effective FY 1999, funding in Project D699, Non-major Systems Test Design & Evaluation, has been transferred to newly established PE 0605716A Army Evaluation Center under OPTEC to perform the Army's newly consolidated developmental and operational evaluation function.											
Mission Description and Budget Item Justification: Sustains an objective test capability for technical testing and support to operational testing of DoD materiel, weapons and weapons systems from concept through production within the acquisition cycle at three Major Range and Test Facility Bases: Yuma Proving Ground, AZ; Aberdeen Test Center, Aberdeen Proving Ground, MD; and White Sands Missile Range, NM. This program also sustains an objective technical test capability at: Aviation Technical Test Center, Fort Rucker AL; Redstone Technical Test Center, Redstone Arsenal, AL; Electronic Proving Ground, Fort Huachuca, AZ; Cold Regions Test Center, Forts Greely and Wainwright, AK; Tropic Test Site, Panama; and a capability to provide for integrated test planning plus safety assessment/verification. Technical test capabilities at each test range have been uniquely established, are in place to support independent test and evaluation (T&E) requirements of funded weapons programs, and are required to assure technical performance, adherence to safety requirements, reliability, logistics supportability, and quality of materiel in development and in production. Program funding includes efforts toward leveraging technologies to include procurement of essential equipment, personnel training and facility modernization to support the warfighter's testing requirements. It also provides for leverage, integration and use of virtual and synthetic test tools/capabilities for reduction of test costs and program acquisition costs. Current testing capabilities are not duplicated within DoD and they represent baseline requirements to assure acceptable risk to the soldier as new technologies emerge into fielded weapons systems. As part of the DoD RELIANCE initiative, the Army (via This program) has committed at the highest senior service levels

A. Mission Description and Justification: Sustains an objective test capability for technical testing and support to operational testing of DoD materiel, weapons and weapons systems from concept through production within the acquisition cycle at three Major Range and Test Facility Bases: Yuma Proving Ground, AZ; Aberdeen Test Center, Aberdeen Proving Ground, MD; and White Sands Missile Range, NM. This program also sustains an objective technical test capability at: Aviation Technical Test Center, Fort Rucker AL; Redstone Technical Test Center, Redstone Arsenal, AL; Electronic Proving Ground, Fort Huachuca, AZ; Cold Regions Test Center, Forts Greely and Wainwright, AK; Tropic Test Site, Panama; and a capability to provide for integrated test planning plus safety assessment/verification. Technical test capabilities at each test range have been uniquely established, are in place to support independent test and evaluation (T&E) requirements of funded weapons programs, and are required to assure technical performance, adherence to safety requirements, reliability, logistics supportability, and quality of materiel in development and in production. Program funding includes efforts toward leveraging technologies to include procurement of essential equipment, personnel training and facility modernization to support the warfighter's testing requirements. It also provides for leverage, integration and use of virtual and synthetic test tools/capabilities for reduction of test costs and program acquisition costs. Current testing capabilities are not duplicated within DoD and they represent baseline requirements to assure acceptable risk to the soldier as new technologies emerge into fielded weapons systems. As part of the DoD RELIANCE initiative, the Army (via this program) has committed at the highest senior service levels to be the lead agency for ground vehicles, gun munitions, electric guns, and surface-to-air missiles. This initiative is currently supported by the services Vice Chiefs of Staff in their role as the T&E Board of Directors. This program finances indirect test operating costs not billable to test customers, replacement of test equipment and test facility modernization projects to maintain current testing capabilities and improvements to safety, environmental protection, efficiency of test operations, and technological advances. This program does not finance reimbursable costs directly identified to a user of these ranges. These direct costs are borne by materiel developers and project/product managers in accordance with DoD Directive 3200.11. T&E operations are required for general research and development; therefore, This program is appropriate for inclusion in Budget Activity 6.

FY 1997 Accomplishments: See projects funded under DE90, DE91, DE93, D618, D632 and that portion of D630 which provided for command-wide integrated test planning and safety assessment/verification.

FY 1998 Planned Program:

- 112681 Command-wide integrated test planning, safety assessment/verification and test operations (previously funded under DE90, DE91, DE93, D618, D630, and D632). Involvement in over 760 Integrated Product Team efforts and issuance of over 350 safety releases and over 100 safety confirmations is projected on both major and non-major acquisition programs/experiments. Some of the major systems to be tested include: Wide Area Mine (HORNET) at Yuma Proving Ground (YPG), Naval Ship Structures at Aberdeen Test Center (ATC), Artillery Systems Dem/Val (CRUSADER) at YPG, LONGBOW HELLFIRE at Redstone Technical Test Center (RTTC), COMANCHE Helicopter subsystems at YPG and Aviation Technical Test

COST (In Thousands)		FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost															
DE90	Yuma Proving Ground	18086	0	0	0	0	0	0	0	0															
<p>A. Mission Description and Justification: Project DE90 Yuma Proving Ground: Yuma Proving Ground (YPG), AZ is DoD's primary artillery, air delivery and desert test range. Vast tracts of varied desert terrain provide testers with conditions found in the Middle East and other desert areas. YPG's mission is to plan, conduct, analyze, and report the results of research, development and other tests of aircraft armament, long-range cannon artillery, air delivery, and mobility systems. Major facilities include an artillery firing range; Army's only air-to-ground aircraft armament range with precision real-time instrumentation; the Army's only weapons accuracy range with actual targets for testing direct fire aircraft and weapons; an instrumented air delivery test area; and desert and dust mobility test areas. YPG is designated as the DoD primary test site for electromagnetic/electrothermal gun systems under Project Reliance. Under Reliance, YPG is also designated as the primary site for the conduct of indirect fire gun munitions and a specialty site for land vehicle testing. YPG manages all extreme natural environment testing (desert, cold weather, and tropic) with off site physical locations (tropic testing in Panama and cold weather testing in Alaska). Cold Regions Test Center (CRTC), Fort Greely, AK is the only cold region environmental test center within DoD. This program includes support of development and production acceptance testing to determine the performance of extreme cold weather specific equipment, the effects of extreme cold weather, wind, and snow on the performance of weapons systems and materiel in full operation, and the man/materiel interface. It also provides, within mission area, for leverage, integration and use of virtual and synthetic test tools/capabilities for reduction of test costs and program acquisition costs.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> 18086 Key systems tested were: KIOWA Warrior (OH-58D), Wide Area Mine (HORNET), CRUSADER Advanced Field Artillery System, USMC Light Armored Vehicle, BRADLEY Fighting Vehicle System, Improved Extreme Cold Weather Boot, M1A2 ABRAMS Tank, and the German SP2000 Howitzer. <p>Total 18086</p> <p>FY 1998 and FY 1999 Planned Program: Project consolidated into project DF30 effective FY 1998.</p> <p>B. DE91	Aberdeen Test Center	31042	0	0	0	0	0	0	0	0																				
<p>A. Mission Description and Justification: Project DE91 Aberdeen Test Center: Aberdeen Test Center (ATC), formerly known as Combat Systems Test Activity, Aberdeen Proving Ground, MD is DOD's designated lead agency for land vehicle testing and Congressionally mandated live fire testing. Under Project Reliance, ATC is designated as primary test site for land vehicle and direct fire gun munitions testing. ATC is responsible for conducting research, development tests of weapons and weapon systems; munitions and components; survey and target acquisition equipment; combat, special, and general purpose vehicles and ancillary automotive equipment; combat engineer equipment; and troop support and individual equipment. ATC is the DoD tester for vulnerability/lethality of Army systems. Major facilities include the Munson automotive test courses, firing ranges addressing a wide variety of firing capabilities, cross-country automotive test sites, a unique robotics vehicle test facility, moving target projection facility, live fire evasive target facility, armor/anti-armor depleted uranium containment facility (Super Box), the elevated rail threat launch facility, underwater test facility for the conduct of tests for surface and subsurface ship structures (Navy support), and a number of special test laboratories. It also provides, within mission area, for leverage, integration and use of virtual and synthetic test tools/capabilities for reduction of test costs and program acquisition costs.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> 31042 Some of the systems tested were: BRADLEY Fighting Vehicle System, M1A1 and M1A2 ABRAMS Tank, Navy Ship Structures, M839 120mm Tank Round, M917 Dump Truck, USMC Advanced Amphibious Assault Vehicle, M88 Improved Recovery Vehicle (HERCULES), and the Heavy Assault Bridge. Institutional funds were also used to modernize test facilities and equipment to maintain current test capabilities and improve the safety, environmental, efficiency, and technological aspects of test operations. <p>Total 31042</p> <p>FY 1998 and FY 1999 Planned Program: Project consolidated into project DF30 effective FY 1998.</p> <p>B. DE93	White Sands Missile Range	64470	0	0	0	0	0	0	0	0		

A. Mission Description and Justification: Project DE93 White Sands Missile Range: White Sands Missile Range (WSMR), NM, is the largest, multi-purpose, overland test range within DoD. This project provides for testing of ballistic and guided missiles, air defense systems, and artillery missile systems for all services. It is the DoD designated primary test facility for overland surface-to-air and surface-to-surface missile testing and nuclear effects under Project Reliance. Launch complexes are integrated into a modern, real-time data collection and data reduction processing system. Facilities include optical and calibration laboratories, inertial guidance test facilities, full spectrum nuclear effects facilities (i.e., radiation, thermal, blast, electromagnetic pulse), temperature, shock, vibration, and electromagnetic effects, and a fully landlocked/secure test missile flight facility. WSMR facilities and services are extensively utilized by the Tri-Services, National Aeronautics and Space Administration, and other government agencies and includes support to the High Energy Laser Systems Test Facility located at WSMR. The Electronic Proving Ground (EPG) is consolidated under WSMR. EPG, Fort Huachuca, AZ, is unique within DoD because of the electromagnetically "clean" environment, extensive real estate, low annual rainfall, and special facilities required to perform development tests for communications, command and control, optical/electro-optical, signal intelligence, and electronic warfare equipment and systems. EPG operates an electro-magnetic environment test facility, an unmanned aerial vehicle test facility, antenna pattern measurement facility, electro-magnetic interference (EMI)/electro-magnetic compatibility (EMC)/TEMPEST test facility, communication test facility, outdoor compact antenna range, high frequency test facility, stress loading facility, and an electro-optical systems test facility. It also provides, within mission area, for leverage, integration and use of virtual and synthetic test tools/capabilities for reduction of test and program costs.

FY 1997 Accomplishments:

- 64470 Some of the key systems tested were: PATRIOT Missile System, Theater High Altitude Area Defense (THAAD), support of Army Warfighting Experiments, Army Tactical Command and Control System (ATCCS), Army Tactical Missile System, Integrated Meteorological System, Global Positioning System, Multiple Launch Rocket System, Theater Missile Defense, and Brilliant Anti-Armor Submunition (BAT).

Total 64470

FY 1998 and FY 1999 Planned Program: Project consolidated into project DF30 effective FY 1998.

<p>A. Mission Description and Justification: Project D618 Aviation Technical Test Center (ATTC), Fort Rucker, AL provides a capability for research, development, production, verification, and materiel change testing of Army aircraft, Aircrew systems/subsystems, and various items of related ground support equipment. Fleet Aircraft Sustainment Testing (FAST) is also conducted to provide continuous reliability/supportability data on new and modified aircraft systems/subsystems. ATTC operates DoD's only helicopter icing spray capability and low speed, fixed wing cloud physics instrumented aircraft which provide for qualification of helicopters for flight under icing conditions. Also funds the Airborne Engineering Evaluation Support Activity (AEESA) at CECOM which includes night vision research, aircraft modeling, flight support, modification of airframes and installation of night vision systems. It also provides, within mission area, for leverage, integration and use of virtual and synthetic test tools/capabilities for reduction of test and program acquisition costs.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> 8787 Some of the key systems tested were: KIOWA Warrior (OH-58D), UH-1H Utility Helicopter, UH-60 BLACKHAWK, COMANCHE, CH-47D CHINOOK, AH-64 APACHE, and the Long Range Biological Standoff Detection System. 519 Airborne Engineering Evaluation Support Activity (AEESA), Fort Monmouth, NJ <p>Total 9306</p> <p>FY 1998 and FY 1999 Planned Program: Project consolidated into project DF30 effective FY 1998.</p> <p>B. COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
D632 Redstone Technical Test Center	1108	0	0	0	0	0	0	0	0

A. Mission Description and Justification: Project D632 Redstone Technical Test Center (RTTC), Redstone Arsenal, AL provides technical test expertise, facilities and capabilities for conduct of research, development, production and post-production testing of missiles, rockets, and low energy/precision guidance lasers. RTTC conducts system level tests on small rockets and missiles, and component/subsystem tests for all categories of Army rockets, guided missiles, and associated equipment. RTTC is the Army lightning tester for hazardous/explosive materials. Major capabilities include a) extensive component/subsystem test facilities, b) ranges for flight testing small missiles and evaluating warhead effects, c) rocket motor static test stands, and d) facilities for climatic, vibration, shock, and electromagnetic environmental effects testing. RTTC is the Product Assurance tester for the Army's Missile Command for repair parts testing and evaluating missile stockpile reliability at storage sites around the world. Through stockpile reliability testing, missile shelf life extension has resulted in cost avoidance greater than \$7.9 billion. It also provides, within mission area, for leverage, integration and use of virtual and synthetic test tools/capabilities for reduction of test and program acquisition costs.

FY 1997 Accomplishments:

- 1108 Some of the key systems tested were: JAVELIN, Missile Repair Parts, TOW/Improved BRADLEY Acquisition System, TOW/Improved Target Acquisition System, USAF MAVERICK Missile, STINGER Missile, HELLFIRE Missile, and Brilliant Anti-armor Submunition (BAT).

Total 1108

<p>A. Mission Description and Justification: Project D699, Non-Major Systems Test Design and Evaluation: This is not a new start. FY 1998 funding was realigned from the U.S. Army Test and Evaluation Command (TECOM) (Project D630) to the U.S. Army Operational Test and Evaluation Command (OPTEC) as part of the Army's consolidation of the materiel evaluation mission. Starting in FY 1999 funding for Project D699 has been transferred to PE 0605716A Army Evaluation Center established under US Army Operational Test and Evaluation Command (OPTEC) to perform the Army's consolidated developmental and operational evaluation function. Project D699 provides for independent evaluation of all Army non-major systems. This project supports integrated Army evaluation for decision makers at milestone reviews, includes the development of test design, evaluation plans, and subsequent independent evaluations of all acquisition milestones to include recommendations for type classification and materiel release of non-major systems. Evaluation results will be incorporated into a single Army evaluation and presented at all acquisition milestones.</p> <p>FY 1997 Accomplishments: Project funded under Project D630 in FY 1997.</p> <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> • 2239 Funds 35 civilian authorizations required to continue test design and evaluation programs, addressing new developments, production, and materiel changes. RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)		DATE							
BUDGET ACTIVITY		PROJECT							
6 - Management and Support		February 1998							
PE NUMBER AND TITLE		PROJECT							
0605602A Army Test Technology and Sustaining Instrumentation		D628							
COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
D628 Test Technology & Sustaining Instrumentation	20761	32160	33439	35758	37991	39899	41824	Continuing	Continuing

A. Mission Description and Budget Item Justification: Project D628 - Test Technology & Sustaining Instrumentation: Test technology provides critical front-end efforts for development of new test methodologies, test standards, advanced test technology concepts for long range requirements, future test capabilities, and advanced instrumentation prototypes for US Army Test and Evaluation Command (TECOM) which includes: Yuma Proving Ground (YPG), AZ; Aberdeen Test Center (ATC), MD; Dugway Proving Ground (DPG), UT; White Sands Missile Range (WSMR), NM; Redstone Technical Test Center (RTTC), AL; and Aviation Technical Test Center (ATTC), AL. Within this element, a major initiative called Virtual Proving Ground (VPG) is directed towards integrating Modeling & Simulation and internetting technologies into the Test and Evaluation process to support acquisition streamlining and to address significant downsizing and budget reductions. Sustaining instrumentation maintains existing technical testing capabilities at TECOM test facilities by replacing unreliable, uneconomical and irreplaceable instrumentation, as well as incremental upgrades of instrumentation and software, to assure adequate test data for acquisition milestone decisions for projects such as Patriot Advanced Capability Phase 3 (PAC 3), M1A2 Main Battle Tank, Joint Service Lightweight Integrated Suit Technology (JSLIST), Crusader, Theater High Altitude Area Defense (THAAD), Comanche and Javelin. Increase beginning in FY 1998 funds critical instrumentation shortfalls and fully implements the TECOM VPG. This innovative Acquisition Streamlining Initiative in testing will significantly improve the ability of the Army to provide early influence on system design, reduce test costs, extend the envelope of information to reduce risk and reduce acquisition costs. This initiative is critical to achieving long term efficiencies not only within the T&E mission to offset funding and manpower reductions but also within the acquisition process at large. Test instrumentation and equipment affected by the Year 2000 (Y2K) phenomena will be modified/replaced to maintain data integrity and test site safety as the millennium changes. Includes research and development effort directed toward support of installations or operations required for general research and development use and therefore is appropriate to Budget Activity 6.

FY 1997 Accomplishments:

- 1436 Provided quick reaction capability to respond to failed instrumentation and replacement needs, provided support for technical committees forging future instrumentation technology developments and maintained/improved existing capability by replacement and limited upgrades of worn out, obsolete or unserviceable equipment/instrumentation at Army technical test ranges (such as replacement of cameras using film with video data instrumentation and digital cameras). Developed prototype instrumentation (design initiation of IR Simulation Test Acceptance Facility) and performed advanced concept studies for development of new technologies (corrosion study of Tropic Test Sites). Continued to develop Test Operations Procedures (TOPs) and International Test Operations Procedures (ITOPs) to ensure quality and consistency of test results throughout Army and for international cooperative applications.

RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)		DATE	February 1998
BUDGET ACTIVITY	PE NUMBER AND TITLE	PROJECT	
6 - Management and Support	0605602A Army Test Technology and Sustaining Instrumentation	D628	
<p>FY 1997 Accomplishments: (continued)</p> <ul style="list-style-type: none"> 8767 Continued support of TECOM Virtual Proving Ground (VPG): Aberdeen Test Center (ATC): Continued to develop databases, detailed models and system interfaces to link VPG tools with legacy systems. Continued to develop Distributed Simulation Architecture and test procedures needed to link high fidelity system models with synthetic test stimuli and virtual instrumentation to conduct simulation testing of automotive and combat vehicles. Aviation Technical Test Center (ATTC): Began integration of aircraft, terrain and targeting models in support of aviation survivability testing. Initiated development of a totally virtual test range to integrate various system models with threat models. Dugway Proving Ground (DPG): Continued development of software to be used for chemical biological/aerosol testing. Developed a multimedia communications network system and a VPG training program for the command. Redstone Technical Test Center (RTTC): Continued to acquire the capability to support virtual component/subsystem tests for small missile systems with open loop and closed loop non-destructive testing of imaging IR/MMW Seekers and all-up-round missiles. Continue developing ground truth databases. Completed networking of ground truth databases and the capability to replicate flight dynamic motion environments. White Sands Missile Range (WSMR): Developed Virtual test capabilities for Command, Control, Communications, Computers and Intelligence (C4I) systems and continued development of virtual mission planning & real-time data analysis capability. Completed software development for modeling large scale C4I deployments in electromagnetic environments. Yuma Proving Ground (YPG): Developed digital database (mapping and clutter characteristics) and graphics capability for system applications. <p>HQ TECOM: Continued VPG design and integration.</p> <ul style="list-style-type: none"> 377 ATTC: Continued replacement of Rotary-wing Flight Test Cockpit Indicators (sensors and switches which measure liquid pressure, gas pressure, temperature, voltages, acceleration, vibration and flow rates) and initiated the acquisition of low dynamics Global Positioning System (GPS) equipment for programs such as Comanche and Special Ops aircraft. 1210 ATC: Continued acquisition of high-speed data analysis and processing equipment. Initiated support for the Land Warrior Test Suite to measure soldier impact/interface of equipment and capability. Began acquisition of range and system safety instrumentation. 856 DPG: Continued replacement of chemical/biological laboratory analysis instrumentation to sustain the Nuclear, Biological, Chemical (NBC) Defense mission. 1382 WSMR: Continued to modify the Command Destruct system for remote control capability IAW personnel downsizing and safety assurance initiatives. Initiated development of an upgrade to the laser tracking capability and began acquisition of Real Time Data Processing capability.

RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)		DATE February 1998
BUDGET ACTIVITY 6 - Management and Support	PE NUMBER AND TITLE 0605602A Army Test Technology and Sustaining Instrumentation	PROJECT D628

FY 1998 Planned Program: (continued)

ATTC: Continue development of a totally virtual test range to integrate various system models with threat models to include integration of the Comanche aircraft model with ground truth telemetry data to perform virtual flight visualization testing.

DPG: Continue the development of software to be used in support of chemical biological/aerosol testing. Perform Verification, Validation and Accreditation (VV&A) of the Atmospheric Effects Module (4DWX) software model.

RTTC: Continue to acquire the capability to support virtual component/subsystem tests for small missile systems with open loop and closed loop non-destructive testing of imaging IR/MMW Seekers, and all-up-round missiles. Continue development of ground truth databases, procure a Dynamic 3-Dimensional IR Scene Generation System for the Electro-Optical Sensor Flight Evaluation Laboratory (EOSFEL) which will provide the capability to accept 3-D Virtual Range databases, also procure and install fiber optic interface equipment. Provide support to Project Constellation, a distributed virtual test capability across multiple TECOM test centers (WSMR, EPG, EPG/Ft Lewis, ATTC and RTTC) using standard architectures, networks, and validation/accreditation procedures.

WSMR: Continue development of virtual reality mission planning/playback for large missile systems. Continue to acquire real-time data analyses workstations to replace non-maintainable obsolete mainframe computers. Continue development of C4I and EW testing capabilities which replaces expensive airborne jammers with simulators which inject actual threat waveforms into the test items and will significantly reduce test costs, test time, and provides test repeatability (controlled test parameters). Develop test range and laboratory fiber-optic interconnectivity, and virtual test capability. Develop DIS and HLA interfaces between test control centers and VPG models. Develop an Airblast Survivability Model for Comanche and an Electromagnetic Model for Breacher (minefield clearing system on M1 chassis).

YPG: Continue development of digital mapping and clutter characteristics. Initiate development of terrain and ground truth databases. Develop aviation fire control and line of sight models. Develop requirements for integrated air delivery modeling and simulation.

HQ TECOM: Continue VPG design and integration.

819 **ATTC:** Continued replacement of Rotary-wing Flight Test Cockpit Indicators. Acquire wireless rotor measurement equipment, data management hardware and software needed to streamline acquisition and data reduction time, test analysis workstations, and interfaces. Develop software to integrate GPS equipment with a ground control station.

2201 **ATC:** Continue development of test site integration which consists of network communications between test site instrumentation and a centralized workstation for test control, monitoring and real-time data analysis and review. Continue to acquire high-speed analysis and processing equipment. Continue to acquire range and system safety instrumentation. Initiate development of a combined Developmental Test (DT)/Operational Test (OT) vehicle instrumentation package. Initiate development of vehicle endurance/performance test data analyzers.

398 **DPG:** Acquire agent hood ventilation system filters and chemical/biological laboratory analysis instrumentation for the Combined Chemical Test Facility to sustain the Nuclear, Biological, Chemical (NBC) Defense mission. Acquire fiber optic network equipment to interconnect the large-scale test grid for outdoor bio-testing.

NOTE: Starting in FY 1999 funding for Project D734 Survivability Evaluation has been transferred to newly established PE 0605716A Army Evaluation Center under US Army Operational Test and Evaluation Command (OPTEC) to perform the Army's newly consolidated developmental and operational evaluation function in support of the materiel acquisition process.

Mission Description and Budget Item Justification: This Program Element (PE) funds activities and functions to conduct objective and integrated survivability and lethality analyses (SLA) for all major and designated non-major Army systems. The analyses quantify the effects of electronic warfare (EW), ballistic, nuclear, chemical, and biological battlefield threats and meteorological conditions on Army individual soldiers and systems. This PE also funds vulnerability assessments of digitized systems for Force XXI.

The work is accomplished through threat research, theoretical and engineering analyses, signature measurements, modeling, simulations, laboratory experiments, and field investigations. Activities in progress include assessment of the effects of smokes and obscurants, passive countermeasures, tactics, lasers, high-power microwave, electro-optical/radio frequency (EO/RF) jammers, electromagnetic environment effects (E3), information warfare (IW), decoys, conventional ballistics and nuclear/biological/chemical (NBC) effects on Army soldiers and systems. The PE work efforts provide U.S. Army decision makers, materiel and combat developers, system users, and independent evaluators critical soldier and system survivability analyses that quantify the soldier/system's survivability effectiveness in battlefield threat environments. Recommendations are provided to the materiel and combat developers on how to mitigate soldier/system deficiencies and enhance their survivability.

BUDGET ACTIVITY 6 - Management and Support	PE NUMBER AND TITLE 0605604A Survivability/Lethality Analysis	
<p>This PE funds civilian salaries, travel, development and maintenance of equipment and facilities, general management, administrative and contractor support required for program execution. The U.S. Army Research Laboratory (ARL) Survivability/Lethality Analysis Directorate (SLAD) conducts this effort. Effective in FY 1998, all ARL Survivability/Lethality Analysis Directorate (SLAD) evaluation functions in support of survivability/lethality testing will be financed through Project D734 under the direction of OPTEC. This PE supports Headquarters, Department of the Army (HQDA), Program Executive Offices (PEOs), Program Managers (PMs), and independent evaluators with EW, chemical, biological, nuclear, and ballistic expertise to conduct special studies, support Test Integration Working Groups (TIWG) and program reviews, review acquisition documentation, provide government testers with technical support, and support milestone decision reviews; and is appropriately funded in Budget Activity 6.</p>

<p>A. Mission Description and Justification: Project D670 - Emerging Technology Systems: This project performs integrated survivability/lethality analyses for the category of systems which include Horizontal Technology Integration systems, Advanced Technology Demonstration initiatives, and proposed survivability enhancements to weapon platforms. Survivability deficiencies are identified, and recommendations are made to Program Executive Officers and Program Managers (PEOs/PMs) to provide hardening fixes early in program development. Work is accomplished through threat research, theoretical & engineering analyses, laboratory experiments, models, simulations, and field investigations. This effort also supports HQDA, independent evaluators, and PEOs/PMs with technical expertise in electronic warfare (EW), ballistics, chemical/biological contamination & decontamination, and meteorology to conduct special studies and to support Test Integration Working Groups (TIWGs), weapon system program reviews, acquisition documentation reviews, and Government testers. This project also provides oversight of the Army's Electromagnetic Environmental Effects (E3) Program. Horizontal Technology Integration systems include 2nd Generation FLIR (2nd GEN FLIR), Battlefield Combat Identification System (BCIS), Global Positioning System (GPS), and Enhanced Position Location Reporting System (EPLRS). Advanced Technology Demonstration initiatives include Battlefield Combat Identification (BCID), Composite Armored Vehicle (CAV), Target Acquisition, Hit Avoidance, Direct Fire Lethality, and Future Scout & Cavalry System (FCSC). Proposed survivability enhancements to weapon platforms include advanced armament technologies, defensive aide suites (DAS), missile countermeasure devices (MCD), emerging propellant technologies, advanced propulsion systems, advanced electronics, and improved spall liners in combat vehicles.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> 2306 Conducted EW vulnerability assessments to support integrated survivability and lethality analyses of emerging technology systems and horizontal technology applications. Developed necessary test beds to conduct laboratory and field investigations, and prepare interim survivability analysis reports. Supported the Army's E3 program. 1382 Conducted ballistic effects investigations, developed system description models, performed damage simulations, and collected experimental data to support integrated survivability and lethality analysis reports. 880 Conducted engineering investigations addressing nuclear hardening and survivability, chemical and biological warfare contamination and decontamination, and dirty battlefield conditions to support integrated survivability/lethality analyses of emerging technology systems and horizontal technology applications. Developed necessary test beds to conduct laboratory and field investigations, and prepared interim survivability analysis reports. <p>Total 4568</p>

6 - Management and Support		0605604A Survivability/Lethality Analysis								D671	
COST (In Thousands)		FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost	
D671	Air Defense/Missile Defense Systems	5443	5742	5779	3220	3643	3785	3940	Continuing	Continuing	

A. Mission Description and Justification: Project D671 - Air Defense/Missile Defense Systems: Provides the survivability/lethality analysis of U.S. Army air defense and missile defense systems to the full spectrum of battlefield threats and recommends fixes to improve their battlefield survivability. The results are used by each Project Manager (PM) and the Program Executive Officer (PEO) to direct weapon system development efforts and structure product improvement programs; by the independent evaluator when they provide system evaluations in support of milestone decisions; by the user to develop survivability/lethality requirements, doctrine and tactics; and by decision makers in formulating program/production decisions. Anti-Radiation Missile (ARM) Counter-Arm efforts assess threat technologies against, THAAD and National Missile Defense (NMD), PATRIOT, Medium Extended Air Defense System (MEADS), and FAAD-C21 ground based sensors. Also funds salaries, travel, equipment/facilities, and management/administrative support needed to execute the program.

FY 1997 Accomplishments:

- 3025 Conducted electronic warfare vulnerability assessments for PATRIOT, Stinger, Sentinel, LINEBACKER, THAAD and National Missile Defense (NMD) in development, undergoing P3I, or have been recently fielded.
- 755 Conducted chemical, biological, nuclear, and atmospheric effects survivability analysis for U.S. Army air defense and missile defense systems.
- 864 Conducted ballistic survivability/lethality analysis for U.S. Army air defense and missile defense systems.
- 250 Provided integrated survivability/lethality analyses to support scheduled air defense/missile defense program decision milestones in FY 97.
- 549 Supported Consolidated Army Evaluation Function.
- Total 5443

FY 1998 Planned Program:

- 3507 Conduct electronic warfare vulnerability/survivability analysis and assessment of U.S. Army air defense and missile defense systems that are in development, undergoing P3I, or have been recently fielded to include PATRIOT, MEADS, Stinger, GBS, LINEBACKER, THAAD, and NMD.
- 761 Conduct chemical, biological, nuclear, and atmospheric effects survivability analysis for U.S. Army air defense and missile defense systems.
- 955 Conduct ballistic survivability/lethality analysis for U.S. Army air defense and missile defense systems.
- 375 Provide integrated survivability/lethality analyses to support scheduled air defense/missile defense program decision milestones in FY 98.
- 144 Small Business Innovative Research/Small Business Technology Transfer Programs
- Total 5742

COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
D672 Aviation Systems	3507	3220	3174	1877	2027	2104	2188	Continuing	Continuing

A. Mission Description and Justification: Project D672 - Aviation Systems: Project investigates the Survivability/Lethality/Vulnerability (SLV) of Army aviation systems to the full spectrum of battlefield threats. Aircraft SLV deficiencies are identified and hardening recommendations identified as appropriate. SLV analysis directly supports major decision milestone reviews, acquisition documentation, test and evaluation master plans, and cost/operational effectiveness analyses.

FY 1997 Accomplishments:

- 1894 Conducted electronic warfare (EW) and countermeasures vulnerability assessment AH-64D Longbow Apache, OH-58D Kiowa Warrior, MH-60K & MH-47E Special Operations Aircraft (SOA) which are in development, undergoing P3I, or have been recently fielded. Conducted assessment of RAH-66 Comanche to projected EW threats.
- 510 Completed ballistic survivability/lethality analysis for Longbow Apache and SOA.
- 555 Conducted chemical, biological, nuclear, and atmospheric effects survivability analysis for Comanche, MH-60K, SOA, and Kiowa Warrior.
- 548 Supported Consolidated Army Evaluation Function with Live Fire strategy formulation.
- Total 3507

FY 1998 Planned Program:

- 1776 Perform electronic warfare vulnerability analysis and assessment of U.S. Army aviation systems and aviation support equipment to include: AH-64D Longbow Apache; RAH-66 Comanche; Suite of Integrated RF Countermeasures; Suite of Integrated IR Countermeasures.
- 690 Complete ballistic survivability/lethality analysis of UH-60Q Ambulance and Comanche. Conduct ballistic vulnerability analysis of Improved Cargo Helicopter (ICH)
- 673 Conduct the chemical, biological, nuclear, and atmospheric effects survivability analysis for Comanche and Longbow Apache.
- 81 Small Business Innovative Research/Small Business Technology Transfer Programs
- Total 3220

FY 1999 Planned Program:

- 1695 Continue electronic warfare vulnerability assessment for aviation systems and aviation support equipment that are in development, undergoing P3I, or have been recently fielded, including AH-64D Longbow Apache, RAH-66 Comanche, CH-47D Chinook, Suite of Integrated RF Countermeasures, and Suite of Integrated IR Countermeasures. Provide susceptibility reports. Provide electronic counter-countermeasures recommendations.
- 798 Conduct the ballistic survivability/lethality analysis for Comanche and ICH.
- 681 Complete chemical, biological, nuclear, and atmospheric effects survivability analysis for Comanche and aviation support systems.
- Total 3174

COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
D675 Force XXI and C4I/IEW Systems	4709	4362	4033	2227	2625	2728	2841	Continuing	Continuing

A. Mission Description and Justification: Project D675 - Force XXI & C4I/IEW Systems: Supports survivability analysis, information warfare, and information operations of Army communications, electronic equipment and Digitized Force against the full spectrum of friendly and enemy threats. Provides field threat environment support for Electronic Warfare Vulnerability Analysis (EWVA). Analyzes vulnerabilities of foreign threat weapons and command, control, communications, computers and intelligence (C4I) and Intelligence Electronic Warfare (IEW) systems to U.S. Army EW systems. Provides threat weapon electronic design data to countermeasure developers and technical capability information to the intelligence community. Supports Army initiatives in vulnerability reduction of C4I/IEW systems against the full spectrum of battlefield threats, including information warfare. Provides analysis for understanding potential vulnerabilities of digitized Force XXI developmental systems. Supports Army Warfighting Experiments and associated Information Operations Vulnerability Assessments for Force XXI Architecture.

FY 1997 Accomplishments:

- 1421 Conducted integrated electronic, ballistic, and chemical/biological/nuclear/atmospheric effects survivability analysis for U.S. Army command and control systems. This effort supported the Advanced Field Artillery Tactical Data System, Common Hardware and Software, Maneuver Control System, FAAD-C2I, Standard Integrated Command Post Shelter, All Source Analysis System, Combat Service Support Control System and Force Battle Command Brigade and Below (FBCB2) (Applique).
- 1330 Conducted integrated electronic, ballistic, and chemical/biological/nuclear/atmospheric effects survivability analysis for U.S. Army communications systems on SINGARS, EPLRSGPS, Mobile Subscriber Equipment, Single Channel Anti-jam Man Portable radio, Secure Mobile Anti-jam Reliable Tactical Terminal, Next Tactical Data Radio, and Enhance Manpack UHF Terminal.
- 1433 Conducted integrated electronic, ballistic, and chemical/biological/nuclear/atmospheric effects survivability analysis for U.S. Army IEW systems -- BCIS, Joint Surveillance Target Attack Radar System/Ground Station Module, improved FLIR, and enhanced Firefinder radar.
- 113 Provided integrated survivability/lethality analyses to support OPTEC for scheduled C4I/IEW systems program decision milestones in FY 97.
- 412 Supported Consolidated Army Evaluation Function.
- Total 4709

FY 1998 Planned Program:

- 1915 Conduct integrated electronic, ballistic, and chemical/biological/nuclear/atmospheric effects survivability analysis for U.S. Army command and control systems. Conduct information operations vulnerability analysis. This effort supports the Advanced Field Artillery Tactical Data System, Common Hardware and Software, Maneuver Control System, FAAD-C2I, Standard Integrated Command Post Shelter, All Source Analysis System, Combat Service Support Control System and FBCB2 (Applique).

A. Mission Description and Justification: Project D677 - Ground Combat Systems: Project investigates the survivability and vulnerability of Army ground combat systems to the full spectrum of battlefield threats. Analysis will support weapon requirements, test and evaluation master plans, cost/operational effectiveness analysis, and major milestone decisions.

FY 1997 Accomplishments:

- 1073 Conducted the electronic warfare vulnerability assessment for Crusader, Bradley A3, Command and Control Vehicle, ABRAMS M1A2, Breacher, Heavy Assault Bridge.
- 1747 Conducted the ballistic survivability/lethality analysis for U.S. Army ground combat systems; supported Future Scout Cavalry System decision reviews.
- 1202 Conducted the chemical, biological, nuclear, and atmospheric effects survivability analysis for U.S. Army ground combat systems.
- 209 SLAD2000 pilot program. Developed methodology for support of integrated analyses - Defense Aided Suite Program.
- 227 Supported susceptibility analyses of survivability suite components for ground combat systems.
- 549 Supported Consolidated Army Evaluation Function.
- Total 5007

FY 1998 Planned Program:

- 1234 Conduct integrated electronic warfare vulnerability analysis and assessment of U.S. Army ground combat systems - Future Scout Cavalry System, Crusader, Bradley A3, Command and Control Vehicle, ABRAMS M1A2, Breacher. Provide interim susceptibility reports. Recommend EW survivability enhancements.
- 2072 Conduct the ballistic survivability/lethality analysis for U.S. Army ground combat systems.
- 1340 Conduct the chemical, biological, nuclear, and atmospheric effects survivability analysis for U.S. Army ground combat systems.
- 258 Provide integrated survivability/lethality analyses to support scheduled ground combat systems program decision milestones in FY 98.

D678	Munitions Systems		5365	5440	5615	3115	3569	3706	3855	Continuing	Continuing		

A. Mission Description and Justification: Project D678 - Munitions Systems: This project funds the investigation of the lethality/vulnerability of Army fire support smart weapons (smart and conventional) to the full spectrum of battlefield threats. The analysis is integrated across all battlefield threats, i.e., conventional ballistic, electronic warfare, directed energy, nuclear weapons effects, and nuclear and chemical/biological contamination effects. This work is accomplished through theoretical and engineering analyses, signature measurements, modeling, simulations, laboratory experiments, and field investigations.

FY 1997 Accomplishments:

- | | |
|------|---|
| 2253 | Conducted integrated electronic warfare vulnerability assessment for advanced developmental U.S. Army conventional and smart munitions systems such as BAT, Hellfire Longbow Missile, Wide Area Mine, and Javelin and any associated pre-planned product improvement programs. Conducted electronic warfare vulnerability assessments of BAT P3I, STAFF, Enhanced Fiber Optic Guided Missile (EFOG-M), Follow on to Tube launched Optically tracked Wired guided munition (FOT TOW), and Multiple Launch Smart Tactical Rocket (MSTAR). |
| 930 | Conducted the ballistic survivability/lethality analysis for U.S. Army munitions systems. |
| 813 | Conducted the chemical, biological, nuclear, and atmospheric effects survivability analysis for U.S. Army munitions systems. |
| 820 | Provided integrated survivability/lethality analyses to support scheduled munitions systems program decision milestones in FY 97. |
| 549 | Supported Consolidated Army Evaluation Function. |
| | Total |
| | 5365 |

FY 1998 Planned Program:

- | | | |
|---|------|--|
| • | 2569 | Conduct the electronic warfare vulnerability assessment for developmental U.S. Army munitions systems and any associated P3I. Conduct electronic warfare countermeasure analysis/support for U.S. Army munitions to include FOT TOW, MSTAR, Precision Guided Mortar Munition (PGMM), and EFOG-M. |
| • | 1114 | Conduct the ballistic survivability/lethality analysis for U.S. Army munitions systems. |
| • | 1220 | Conduct the chemical, biological, nuclear, and atmospheric effects survivability analysis for U.S. Army munitions systems. |
| • | 400 | Provide integrated survivability/lethality analyses to support scheduled munitions systems program decision milestones in FY 98. |

<p>A. Mission Description and Justification: Project D679 - Soldier Systems: Supports individual-soldier related programs and material to maximize survivability and functionality under severe combat environments of chemical-biological warfare, nuclear, electronic and information warfare, countermeasures, directed energy and ballistics. Provides for technical investigations and analyses into the survivability of soldiers in various combat environments with many types of equipment. Provides administration of the MANPRINT Soldier Survivability (SSv) Domain. Broad areas addressed by SSv are: Fratricide reduction; soldier detectability reduction; attack prevention if detected; damage prevention; medical injury reduction; the reduction of mental and physical fatigue. The survivability of soldier systems is investigated and reported to milestone decision reviews.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> 392 Conducted integrated electronic, ballistic, and chemical/biological/nuclear/atmospheric effects survivability analysis for the U.S. Army Land Warrior System (Computer and Communication System, Weapon System, Protective Clothing and Individual Equipment, Chem/Bio Mask, and Integrated Headgear), Force XXI Land Warrior ACTD components and the Air Warrior System. 85 Coordinated preparation and direct execution of MANPRINT Soldier Survivability Assessments and Reports. 47 Sustained international soldier activities (NATO); provide chem/bio/physiology expertise for operations other than war and less-than-lethal efforts. 102 Provided integrated survivability/lethality analyses to support scheduled soldier systems program decision milestones in FY 97. 137 Supported Consolidated Army Evaluation Function through development of Survivability Criteria, Measure of Effectiveness, measures of Performance, and Data Elements. <p>Total 763</p> <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> 494 Conduct integrated electronic, ballistic, and chemical/biological/nuclear/atmospheric effects survivability analysis for the U.S. Army Land Warrior and Air Warrior Systems (Computer and Communication System, Weapon System, Protective Clothing and Individual Equipment, Chem/Bio Mask, and Integrated Headgear), Force XXI Land Warrior ACTD components, the Mounted Warrior System and Military Operations in Urban Terrain ACTD. 184 Coordinate preparation and direct execution of MANPRINT Soldier Survivability Assessments and Reports. 27 Sustainment of international soldier activities (NATO); provide chem/bio/physiology expertise for operations other than war and less-than-lethal efforts. 75 Provide integrated survivability/lethality analyses to support scheduled soldier systems program decision milestones in FY 98. 20 Small Business Innovative Research/Small Business Technology Transfer Programs <p>Total 800</p>

A. Mission Description and Justification: Project D734 - Survivability Evaluation: Effective in FY 1998, all U.S. Army Research Laboratory (ARL) Survivability/Lethality Analysts Directorate (SLAD) evaluation functions in support of survivability/lethality testing will be financed through Project D734 under the direction of the U.S. Army Operational Test and Evaluation Command (OPTEC). Starting in FY 1999 funding for Project D734 has been transferred to PE 0605716A Army Evaluation Center established under OPTEC to perform the Army's consolidated developmental and operational evaluation function. FY 1998 funding provides for evaluation of soldier and materiel system survivability into an integrated Army evaluation supporting decision-makers at milestone reviews. It includes the planning and coordination of developmental tests, experiments, and subsequent evaluation of results to determine system survivability in battlefield threat environments. Evaluators will develop the strategy and incorporate SLAD efforts to ensure that electronic warfare (EW), information warfare (IW), conventional ballistics, nuclear, chemical, biological, electromagnetic environmental effects (E3), atmospheric/obscuration and meteorological effects on soldier/system survivability are properly addressed. Evaluation results will be incorporated into a single Army evaluation and presented at all acquisition milestones.

FY 1997 Accomplishments: Project funded by SLAD under other projects in this PE.

FY 1998 Planned Program:

- 1559 Conduct integrated survivability evaluations for Army weapon systems and Automated Information Systems for major milestone decisions, materiel changes, and materiel releases in support of the Army Acquisition Executive and force development. Develop the evaluation strategy, design technical and operational tests and evaluate the test results to address the survivability and lethality factors pertinent to the decision process such as: soldier survivability, performance in countermeasures, system survivability. As the Army lead for Live Fire Test and Evaluation, plan and execute the Army Live Fire Test and Evaluation program for required developmental systems. Specific efforts include: conduct evaluations of Crusader, Armored Scout Vehicle (ASV), Army Tactical Missile System Block II (ATACMS Blk II), Hellfire, Longbow, Army TACMS Block II/BAT P31 (BAT P31), FOT TOW, and Wide Area Munition (WAM) Milestone III results; prepare System Evaluation Plans for Multiple Launch Rocket System (MLRS A1), Bradley Fire Support Team (BFIST), Breacher, Bradley Fighting Vehicle System, Command and Control System (C2V), Command, Control, Communication, and Computer Systems (C4I), Suite of Integrated RF Countermeasures (SIRFCM), and Search and Destroy Armor (SADARM). Efforts include costs for 18 civilian authorizations.
- 40 Small Business Innovative Research/Small Business Technology Transfer Programs

Total 1599

FY 1999 Planned Program: Project consolidated under newly established PE 0605716A Army Evaluation Center under OPTEC.

<p>A. Mission Description and Budget Item Justification - Project DE97 DoD High Energy Laser Systems Test Facility (HELSTF): The HELSTF provides a broad based high energy laser (HEL) RDTE capability at White Sands Missile Range, NM in support of Tri-Service HEL research and development and damage, vulnerability, and lethality laser testing. The HELSTF's laser development support capabilities include a certified laser test range, a fully integrated laser support facility, an extensive array of fully instrumented test sites and the Sea Lite Beam Director (SLBD). This multiple use facility supports testing of laser effects for targets ranging from scaled laboratory up through full scale flying target tests. Test facility support operations are required for general research and development; therefore, this PE is appropriate for inclusion in Budget Activity 6.</p>													
<p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> 23509 Performed required site operations and maintenance activities to maintain laser system testing infrastructure in support of NAUTILUS, Air Force Airborne Laser Program and other Space-based Laser programs. 5718 Initiated the Solid State Laser Demonstration Program. Total 29227 													
<p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> 14147 Perform Operation and Maintenance and base operations support functions in support of the Army, Department of Defense and other agencies conducting high energy laser systems concept development studies and test and evaluation on candidate high energy laser weapons systems (Tactical High Energy Laser, Free Electron Laser, Air Force Airborne Laser, and other space-based laser programs). 9461 Conduct field testing of the THEL Advanced Concept Technology Demonstrator. 4668 Continue the Solid State Laser Demonstration Program. Complete single module device & beam distortion correction. Manufacture & Integrate the 3 module device. Complete testing of Army Pointer Tracker (APT) Backup Primary Mirror. Perform dynamic target tracking with APT. 689 Small Business Innovative Research/Small Business Technology Transfer Programs. Total 28965

<p>A. Mission Description and Budget Item Justification Performs all engineering functions essential for certifying the airworthiness of assigned Army aircraft. Performs safety-of-flight investigations/assessments and issues messages to the field. Manages/executes the Army's Aeronautical Design Standards (ADS) Program; ADS is a continuously evolving process incorporating revisions for each change to the standard design of an aircraft system. Manages airworthiness approval of new vendor qualification/testing on fielded aircraft and materiel changes for all assigned Army aircraft systems. Provides airworthiness-engineering support to the Army Aviation Program Executive Office and the Army Aviation and Missile Command Program/Product Manager requirements for major development/modification and any future system/subsystems. Manages the test and evaluation process to support the airworthiness qualification of developmental and fielded aircraft systems. This project funds activities required for general research and development on support of aircraft qualification. Since these activities are not allocable to specific R&D missions, this project is appropriately funded in Budget Activity 6.</p> <p>Acquisition Strategy: Not Applicable</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> • 342 Executed technical and airworthiness qualification mission for PEO Aviation force modernization aircraft systems. • 596 Conducted safety-of-flight investigations/assessments to include PEO Aviation force modernization aircraft systems. • 143 Executed the Army Aeronautical Design Standards Program. • 880 Provided continuing engineering support for technology upgrades to PEO Aviation force modernization aircraft systems. • 454 Provided test management capability for PEO Aviation Program/Project/product managers. • 2415 Total <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> • 746 Manage/execute technical and airworthiness qualification mission for PEO Aviation force modernization aircraft systems. • 574 Continue to ensure safety-of-flight investigations/assessments to include PEO Aviation force modernization aircraft systems. • 149 Manage/execute the Army Aeronautical Design Standards Program. • 864 Provide continuing engineering support for technology upgrades to PEO Aviation force modernization aircraft systems. • 424 Continue to provide test management capability for PEO Aviation program/project/product managers. • 71 Small Business Innovative Research/Small Business Technology Transfer Programs. COST (In Thousands)		FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost	
D128 Meteorological Support to TECOM Activities		6278	6235	6691	6712	6911	7085	7270	Continuing	Continuing	
<p>A. Mission Description and Budget Item Justification: Project D128 - Meteorological Support to Test and Evaluation Command (TECOM) Activities: Provides standard and specialized weather forecasts and data for test reports to satisfy Army/DoD RDT&E-unique test requirements for modern weaponry, i.e., (1) Unique atmospheric analysis sampling to include atmospheric transmittance, extinction, optical scintillation, infrared temperature, aerosol/smoke cloud dispersion characteristics, ballistic meteorological measurements, snow characterization and crystal structure; (2) Unique consultation forecasting to include prediction of sound propagation for ballistic tests, specialized prediction of light level and target to background predictions for electro-optical testing and ballistic meteorology; (3) Advisory and warning products such as go-no-go advisories for ballistic and atmospheric probe missiles, smoke obscurant tests, hazard predictions for chemical agent munitions disposal, simulated nuclear blasts, and weather warnings for range/test safety. Provides technical support to Army Program Executive Officers (PEOs), Project Managers (PMs) and the Army test ranges. Develops methodologies and acquires instrumentation/systems that allow meteorological teams to support current and future Army/DoD RDT&E requirements. This PE finances indirect meteorological support operating costs not billable to customers and replacement/upgrade of meteorological instrumentation. Direct costs for meteorological support services are not funded by this PE, but are borne by the customer (i.e. materiel developers and project/product managers). Includes research and development efforts directed towards support of installations or operations required for general research and development use; therefore, is appropriate to Budget Activity 6.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> 2952 Provided weather forecasts, severe weather/advisories, staff meteorological services, and atmospheric measurements in support of all Army/DoD tests and projects at 11 Army test sites/ranges and as safari to off range test sites. 2330 Modernized operational equipment to meet customer requirements for meteorological support. <ul style="list-style-type: none"> - Completed Phase III (last) upgrade of Surface Automated Meteorological System (SAMS) to increase data transmission rates, and data reduction and analysis. - Electro-optical (EO) Instrumentation: Completed and fielded Small Portable Transmissometer Systems (SPOT) which measure IR, Near IR and Visible spectrum over 2Km. path length. - Sustainment of mobile systems. - Completed validation and fielding of atmospheric profilers. - Completed phase I, initial proof-of-concept, for Major Range and Test Facility Base (MRTFB) "4D" (x,y,z, time) Weather System (4DWX), a real-time, four dimensional integration of meteorological data from multiple and various sensor types to include EO and phenomena affecting weapons into a system that displays in a scale compatible with test needs for forecasts, go-no-go decisions, and allows for the replay of test conditions for forensic analyses of why a test may have failed.

NOTE: Starting in FY 1999 funding for Project M542 Major Systems Test, Design and Evaluation has been transferred to newly established PE 0605716A Army Evaluation Center (AEC) under the US Army Operational Test and Evaluation Command (OPTEC) to perform the Army's consolidated developmental and operational evaluation function in support of the materiel acquisition process.

Mission Description and Budget Item Justification: The U.S. Army Materiel Systems Analysis Activity (AMSAA), as the Army's center for materiel systems analysis, provides the technical capability for the conduct of materiel systems analysis in support of Army decision makers throughout the materiel acquisition process. AMSAA responds with analyses required by the decision makers of the Army and the Department of Defense (DoD), the Program Executive Officers/Program Managers (PEO/PM), the Army's Independent Evaluator (Operational Test and Evaluation Command), and the Army analytical community. These projects fund efforts in support of operations required for general research and development and, since they are not allocable to specific research and development missions, are appropriately funded in Budget Activity 6.

In accomplishing its Materiel Systems Analysis Mission, AMSAA analyzes the performance and combat effectiveness of conceptual, developmental, and existing systems. AMSAA conducts and supports systems analyses, such as: analyses of alternatives (AoAs), system cost/performance tradeoffs, early technology tradeoffs, weapons mix analyses, requirements analyses, technology insertion, and technology base analyses. These analyses are used by the Army Materiel Command (AMC) and Department of Army (DA) decision makers in deciding acquisition, procurement, and logistic decisions to provide quality equipment and procedures into the hands of the soldiers. AMSAA provides Army-wide support in the development of methodologies, models, simulations, and databases for use in its and other Army agencies' analyses. AMSAA supports the Army modeling and simulation (M&S) community by providing item level performance methodology/data, and standardized algorithms. AMSAA is the Army's designated source of item level performance data and, as such, develops, maintains, and provides a diverse range of data for its and other Army and DoD agencies' analyses. AMSAA is the Army's executive agent for its verification, validation, and accreditation program and for the Research, Development and Acquisition (RDA) domain as part of the Army's M&S Management Structure. AMSAA also develops reliability, availability, and maintainability (RAM) methodologies for use in its and other Army agencies' analyses.

FY 1998 funding in Project M542 supports the Army's independent technical evaluation role transferred from AMSAA to the Evaluation Analysis Center (EAC) under the U.S. Army Operational Test and Evaluation Command (OPTEC) as part of the Army consolidation of materiel evaluation. In the role of the independent technical evaluator, EAC provides the technical input to the single System Evaluation Report (SER) for Army acquisition programs. EAC provides technical evaluations for major milestone decisions, materiel changes, and materiel releases in support of the Army Acquisition Executive. EAC designs technical, developmental, and production tests to

<p>address factors pertinent to the decision process, such as: technical maturity, technical risk, technical system performance, producibility, supportability, etc. EAC conducts technical assessments for milestone acquisition evaluations of system tests (e.g. performance, reliability, availability, and maintainability assessments). EAC has a lead role in the planning and execution of the Army Live Fire Tests through its test design and evaluation responsibilities. The Operational Evaluation Command (OEC) under OPTEC transferred from the Operations and Maintenance, Army (OMA) appropriation into Project M542 in FY 1998. OEC plans and conducts independent operational evaluations to determine and report the effectiveness and suitability of Army systems in support of the OPTEC test and evaluation role in Army acquisition and force development. OEC is responsible for operational T&E and Continuous Evaluation of assigned Major Defense Acquisition Programs (MDAP), Major Automated Information Systems Review Council (MAISRC) programs, and In-Process Reviews (IPR).</p>

<p>A. Mission Description and Justification: In FY1997, this project funded the U.S. Army Operational Test and Evaluation Command (OPTEC), Evaluation Analysis Center (EAC) mission of technical test design and evaluation. Provides for the Army's technical evaluation of developmental systems and tests for all major Army acquisition programs. Provides technical evaluations for major milestone decisions, materiel changes, and materiel releases in support of the Army Acquisition Executive (AAE). Designs technical, developmental, and production tests to address factors pertinent to the decision process, such as: technical maturity, technical risk, technical system performance, producibility, supportability, etc. Conducts performance and technical assessments for milestone acquisition evaluations of system tests (e.g. risk assessments and reliability, availability and maintainability assessments). Has lead role in the planning and execution of the Army live fire tests through its test design and evaluation responsibilities. This project funds the salaries of civilian employees assigned to the test design and evaluation mission. This project does not finance test facilities, test instrumentation or test equipment.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> 4161 Provided evaluations for systems that are either in development phase or undergoing major materiel change/technology insertion. System evaluations supported program milestone decision reviews during FY 97. Evaluations in support of AAE decisions/DA IPRs include: Javelin, Army Tactical Missile System - Blocks IA and II (ATACMS), Extended Range Multiple Launch Rocket System (ER-MLRS), Enhanced Position Location and Reporting System (EPLRS), and the Wide Area Munitions (WAM) System. Developed System Evaluation Plans (SEPs) for tests to be conducted in FY 98 through FY 02. This effort included test design and evaluation planning for systems projected to undergo live fire testing in FY98-99. Early planning and analysis assured the early identification of requirements for long lead procurement of experimental/prototype equipment or test instrumentation and the integration of developmental and operational evaluations to support accelerated acquisition. Effort included costs for 60 civilian authorizations. <p>Total 4161</p> <p>FY 1998 Planned Program: The AMSAA Test Design and Evaluation (TD&E) mission was transferred to the U.S. Army Operational Test and Evaluation Command (OPTEC) (Project M542) in the FY1998/1999 President's Budget Submission.</p> <p>FY 1999 Planned Program: The AMSAA Test Design and Evaluation (TD&E) mission was transferred to the Army Operational Test and Evaluation Command (OPTEC) (Project M542) in the FY1998/1999 President's Budget Submission. COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
M541 Materiel Systems Analysis	9845	8715	9711	9736	11155	11481	11827	Continuing	Continuing

A. Mission Description and Justification: Project M541 funds the Army Materiel Systems Analysis Activity's (AMSAA) primary mission of materiel systems analysis. AMSAA analyzes the performance and combat effectiveness of conceptual, developmental, and existing systems to conduct and support systems analyses, such as: analysis of alternatives (AoAs), system cost/performance tradeoffs, early technology tradeoffs, weapons mix analyses, requirements analyses, technology insertion, and technology base analyses. AMSAA provides Army-wide support in the development of methodologies, models, simulations, and databases for use in its and other Army agencies' analyses. AMSAA supports the Army modeling and simulation (M&S) community by providing item level performance methodology/data and standardized algorithms that help ensure the credibility of Army M&S. AMSAA is the Army's designated source of item level performance data and, as such, develops, maintains, and provides a diverse range of data for its and other Army and DoD agencies' analyses. AMSAA is the Army's executive agent for its verification, validation, and accreditation program and for the Research, Development and Acquisition (RDA) domain as part of the Army's M&S Management Structure. AMSAA also develops reliability, availability, and maintainability methodologies for use in its and other Army agencies' analyses. This project funds the salaries of civilian employees assigned to the materiel system analysis mission.

FY 1997 Accomplishments:

- 472 Developed and certified system performance data for U.S. and foreign systems to be used to support Army and Joint AoAs, force structure studies and theater level studies. Examples of programs where decisions were influenced: Future Scout Cavalry Systems CPEA, Brilliant Anti-Tank (BAT) Pre-Planned Product Improvement (P3I), Joint Anti-Armor Requirements Review, and Firefinder P3I. Effort included costs for 7 civilian authorizations.
- 7215 Provided analyses of performance and combat effectiveness of materiel systems and tech base programs in support of HQDA, AMC, Program Executive Offices (PEOs)/Program Managers (PMs) and Research & Development (R&D) Centers. Included are performance analyses, analyses of alternatives, risk assessments, and reliability, availability, and maintainability assessments for HQDA and OPTEC in support of milestone acquisition decisions. Provided performance data and analytic support for Distributed Interactive Simulation (DIS) projects, and AWE supporting Force XXI. Examples of programs where decisions were influenced: Starstreak, BAT P3I, ATACMS BLK 1A, Longbow Hellfire, M829E3, and Future Combat System. Effort included costs for 101 civilian authorizations.
- 1248 Developed, modified, and maintained item level methodology used as tools to conduct systems analysis. Examples of such models were: Target Acquisition Model, Ground Wars System Model, Physics of Failure Model, GENESIS Model, ARTQWIK Model and SAMSITE Model. Developed methodologies to characterize the performance and combat effectiveness of new technologies in force-on-force analyses. Performed validation and accreditation of item level performance models and methodologies which were developed in-house. Effort included costs for 17 civilian authorizations.

BUDGET ACTIVITY	PE NUMBER AND TITLE	PROJECT	
6 - Management and Support	0605706A Materiel Systems Analysis	M541	
FY 1997 Accomplishments: (continued)			
•	910 Evaluation Analysis Center (EAC) conducted evaluations of materiel systems in support of the Army Acquisition Executive. Included were performance analyses, reliability, availability, and maintainability assessments for HQDA in support of milestone acquisition decisions. Specific efforts included preparation of System Evaluation Plans (SEPs) for Army TACMS Block II/BAT (BAT-P3D), Firefinder II, Army Tactical Missile System Block 1A (ATACMS BLK 1A), Longbow, Hellfire, Starstreak, M829E3, and system evaluations or materiel releases for the Force XXI Starstreak, Sentinel, Stinger Block I, and Linebacker. Effort included costs for 8 civilian authorizations.		
Total	9845		
FY 1998 Planned Program:			
•	449 Develop and certify system performance data for U.S. and foreign systems to be used to support Army and Joint AoAs, force structure studies and theater level studies. Examples of programs where decisions will be influenced: Grizzly, Deep Battle Sensors, and Follow-On-To-TOW (FOTT). Effort includes costs for 6 civilian authorizations.		
•	7084 Analyze the performance and combat effectiveness of materiel systems and tech base programs in support of HQDA, AMC, PEOs/ PMs and R&D Centers. Included are conduct of and support to: cost and operational effectiveness analyses, analyses of alternatives, system cost/performance tradeoffs, early technology tradeoffs, weapons mix analyses, requirements analyses, technology insertion, and technology base analyses. Examples of programs where decisions will be influenced: Grizzly, Soldier as a System, ATACMS Extended Range Missile, MRLS Extended Range Missile, SADARM, XM982 and XM795 Missile. Effort includes costs for 98 civilian authorizations.		
•	1182 Develop, modify, and maintain item level methodology used as tools to conduct systems analysis. Examples of such models are: Crusader Performance Model, Virtual Proving Ground (VPG) Model, Close Combat Tactical Trainer (CCTT) Model, ACQUIRE-X Model, Cost As An Independent Variable Methodology. Develop methodologies to characterize the performance and combat effectiveness of new technologies in force-on-force analyses. Perform validation and accreditation of item level performance models and methodologies which will be developed in-house. Effort includes costs for 16 civilian authorizations.		
Total	8715		
FY 1999 Planned Program:			
•	530 Develop and certify system performance data for U.S. and foreign systems to be used to support Army and Joint AoAs, force structure studies and theater level studies. Examples of programs where decisions will be influenced: Crusader and Near Term Digital Radio (NTDR). Effort includes costs for 7 civilian authorizations.		
•	7907 Analyze the performance and combat effectiveness of materiel systems and tech base programs in support of HQDA, AMC, PEOs/ PMs and R&D Centers. Included are conduct of and support to: AoAs, system cost/performance tradeoffs, early technology tradeoffs, weapons mix analyses, requirements analyses, technology insertion, and technology base analyses. Examples of programs where decisions will be influenced: Crusader and NTDR. Effort includes costs for 102 civilian authorizations.

M542 Major Systems Test, Design and Evaluation		0	19040	0	0	0	0	0	Continuing	Continuing		

A. Mission Description and Justification. This is not a new start. Funds were realigned from Project D026 and M541 in support of the Army consolidation of the materiel evaluation function under the U.S. Army Operational Test and Evaluation Command (OPTEC). Also reflects the realignment of the Operational Evaluation Command (OEC) previously funded in the Operations and Maintenance, Army (OMA) appropriation. Starting in FY 1999 this funding will be transferred to a newly established PE 0605716A Army Evaluation Center. This realignment will complete the consolidation of Army Evaluation. In FY 1998 Project M542 funds the OPTEC mission of evaluation and test design. OPTEC is the Army's technical and operational evaluator of developmental systems and tests for all Army acquisition programs. This mission is shared by the Evaluation Analysis Center (EAC) and OEC, both subordinate commands to OPTEC. OPTEC provides integrated technical and operational evaluations and continuous evaluation of assigned Major Defense Acquisition Programs (MDAPs), Major Automated Information Systems Review Council (MAISRC), and In-Process Review (IPR) programs for major milestone decisions, materiel changes, and materiel releases in support of the Army Acquisition Executive and force development. OPTEC develops the evaluation strategy, designs technical and operational tests, and evaluates the test results to address the effectiveness, suitability, and survivability factors pertinent to the decision process, such as: Critical Operational Issues and Criteria (COIC), system performance, soldier survivability, performance in countermeasures, survivability, reliability, supportability, etc. OPTEC has a lead role in the planning and execution of the Army live fire tests through its evaluation and test design responsibilities. This project funds the salaries of civilian employees assigned to the evaluation and test design missions. This project does not finance test facility operations, test instrumentation or test equipment.

FY 1997 Accomplishments: Project funded under Projects D026 and M541.

FY 1998 Planned Program:

- 18563 Prepare integrated System Evaluation Plans (SEPs) and conduct integrated technical and operational evaluations and continuous evaluations of all Army weapon systems. Provide test designs and evaluations for weapon systems throughout the entire research and development of a system or those undergoing major materiel change. System evaluations will support program milestone decision reviews during FY 98. Develop test design and evaluation plans for tests to be conducted in FY 99 through FY 03. These efforts include evaluation and test design planning for systems projected to undergo live fire testing in FY 99-00. Early planning and analysis assures early identification of requirements for long lead procurement of experimental/prototype equipment or test instrumentation and integration of developmental and operational evaluations to support accelerated acquisition and technology transition programs. Major efforts include: Army Tactical Missile System Block II (ATACMS Blk II), Bradley Fighting Vehicle System (BFVS), Extended Range - Multiple Launch Rocket System (ER-MLRS), Bradley Fire Support Team (BFIST), Command and Control Vehicle(C2V), Wide Area Munition (WAM) system, Army TACMS Block II/BAT (BAT-P31), Search and Destroy Armor (SADARM), Advanced Field Artillery Tactical Data System (AFATDS), All Source Analysis System (ASAS), Battlefield Combat Identification System (BCIS), Close Combat Tactical Trainer (CCTT), Crusader, Forward Area Air Defense (FAAD-C2I), Joint Stars, Joint Tactical Information Distribution System

DC28 Acquisition/Exploitation of Threat Items	3854	4284	4031	3918	3794	4119	4041	Continuing	Continuing

Mission Description and Budget Item Justification: This is a continuing project for acquisition and exploitation of foreign materiel to support force and materiel development, scientific and technical intelligence needs, operations and training. Primary program objectives are to reduce research and development times for U.S. systems by analyzing innovations and technology in foreign materiel, and to make research and development more efficient by reducing uncertainties concerning potential advanced technology threats to U.S. systems. The program also serves to develop counter measures and to support operational commanders with items for training the force. This program enables the Army to conserve research and development funds and man-hours, enhance and improve U.S. designs, and provide realistic testing and training. These projects fund foreign materiel acquisitions and exploitations in support of the U.S. Army testing, training and intelligence programs required for general research and development and, since they are not allocable to specific R&D missions, are appropriately funded in Budget Activity 6.

DC28	Acquisition/Exploitation of Threat Items	3854	4284	4031	3918	3794	4119	4041	Continuing	Continuing	
<p>A. Mission Description and Justification: Project DC28 - Acquisition/Exploitation of Threat Items: This is a continuing project for acquisition and exploitation of foreign materiel constituting potential advanced technology threats to U.S. systems. The primary aim of this project is to maximize the efficiency of research and development for force and materiel development by reducing the uncertainties concerning these threats. The project also answers general scientific and technical intelligence requirements, aids in the development of countermeasures to threat materiel and threat technology, and provides materiel for realistic testing and training. Acquisitions and exploitations are executed according to an Army Foreign Materiel Review Board and with the approval of the Army Deputy Chief of Staff for Intelligence (DCSINT).</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> 450 Acquired threat systems identified and prioritized in the FY 97 Army Foreign Materiel Program (FMP) Five Year Plan. 2404 Initiated, continued or completed exploitation projects on ground systems of Army interest identified in the FY 97 Army FMP Exploitation Plan. 1000 Initiated, continued or completed exploitation projects on missile systems of Army interest identified in the FY 97 Army FMP Exploitation Plan. Total 3854 <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> 600 Acquire threat systems identified and prioritized in the FY 98 Army Foreign Materiel Program (FMP) Five Year Plan. 2577 Initiate, continue or complete exploitation projects on ground systems of Army interest identified in the FY 98 Army FMP Exploitation Plan. 1000 Initiate, continue or complete exploitation projects on missile systems of Army interest identified in the FY 98 Army FMP Exploitation Plan. 107 Small Business Innovative Research/Small Business Technology Transfer Programs. NOTE: Project D985 Concepts Evaluation of Materiel transfers to PE 0605326, Project D308 in FY1999.

Mission Description and Budget Item Justification: This program finances the operational testing of developmental materiel systems. Its efforts are directed toward the support of operations required for use in general research and development (R&D). **Project DV02** provides for the recurring costs of operating the test activities of the U.S. Army Operational Test and Evaluation Command (OPTEC). Increase starting in FY 1998 reflects restructure directed by OSD of manpower and funds for the Test and Evaluation Coordination Offices (TECO's), Operational Threat Support Activity (OTSA), Test and Evaluation Support Activity and test support funds previously programmed and budgeted in the Operations and Maintenance, Army (OMA) appropriation. The FY 1999 increase completes the transfer of manpower and funds for OTSA from the OMA appropriation. **Project D001** provides for direct operational and joint test costs incurred by OPTEC. Excludes funding for Acquisition Category I (ACAT I) major weapons systems which are programmed within the PE funding development for each system. Funding increase beginning in FY 1998 is necessary to execute ACAT II-IV, Automated Information Systems (AIS), and joint test workload scheduled for FY 1998-1999. **Project D985** enables U.S. Army Training and Doctrine Command (TRADOC) battle labs and schools to evaluate emerging technologies and other equipment to help define Army mission needs and operational requirements. Projects selected for funding are relatively low cost conceptual evaluations, with high potential for warfighting return on investment. Program provides direct support to battle lab minor Advanced Warfighter Experiments (AWEs). Program is also a first look at emerging technologies that have the potential to support the Army's Force XXI design needs. **Project D987** provides for development and acquisition of non-major and sustaining instrumentation necessary to attain and maintain the data collection and analysis capability to conduct credible and robust operational tests as demanded by the DoD and Congress. It provides for replacement and improvements of existing obsolete inventory and for the development of new technologies to keep abreast of new weapon advancements. The projects in PE 0605712A fund operational testing and concept evaluation of materiel in support of the Army and DoD general research and development. Since they are not allocable to specific R&D missions, they are appropriately funded in Budget Activity 6.

DV02 Test Directorates	14486	34912	41004	42613	36914	43961	44627	Continuing	Continuing

A. Mission Description and Justification: Project DV02 - Test Directorates: This project finances recurring costs, including civilian pay, support contracts, temporary duty, supplies and equipment of subordinate elements of the Test and Experimentation Command (TEXCOM): Airborne and Special Operations Test Directorate, Fort Bragg, NC; Air Defense Test Directorate, Fort Bliss, TX; Fire Support Test Directorate, Fort Sill, OK; and the Intelligence and Electronic Warfare Test Directorate, Fort Huachuca, AZ and test directorates located at Fort Hood, TX (Aviation; Close Combat; Engineer/Combat Support; Command, Control, and Communications-Information Mission Area; Advanced Concepts). The primary mission of these test directorates is to conduct operational testing of developmental materiel and force development test and experimentation (FDTE). Increase starting in FY 1998 reflects transfer of manpower and funds directed by OSD for the Test and Evaluation Coordination Offices (TECO's), Operational Threat Support Activity (OTSA), Test and Evaluation Support Activity and test support from the OMA appropriation. Increase in FY 1999 completes the transfer of manpower and funds for OTSA from the OMA appropriation.

FY 1997 Accomplishments:

- 3777 Operational costs including 72 civilian authorizations at Fort Hood, TX Test Directorate
- 2444 Operational costs including 28 civilian authorizations at Fort Sill, OK Test Directorate
- 3036 Operational costs including 35 civilian authorizations at Fort Huachuca, AZ Test Directorate
- 2369 Operational costs including 40 civilian authorizations at Fort Bragg, NC Test Directorate
- 2860 Operational costs including 38 civilian authorizations at Fort Bliss, TX Test Directorate
- Total 14486

FY 1998 Planned Program:

- 16112 Operational costs including 175 civilian authorizations at Fort Hood, TX Test Directorate (includes Test and Evaluation Support Activity)
- 2318 Operational costs including 28 civilian authorizations at Fort Sill, OK Test Directorate
- 2995 Operational costs including 35 civilian authorizations at Fort Huachuca, AZ Test Directorate
- 2387 Operational costs including 40 civilian authorizations at Fort Bragg, NC Test Directorate
- 3017 Operational costs including 38 civilian authorizations at Fort Bliss, TX Test Directorate
- 6073 Operational costs including 9 civilian authorizations at Operational Threat Support Activity, Fort Bliss, TX
- 1443 Operational costs including 18 civilian authorizations at Test and Evaluation Coordination Offices

FY 1999 Planned Program:

- 16890 Operational costs including 161 civilian authorizations at Fort Hood, TX Test Directorate (includes Test and Evaluation Support Activity)
- 2488 Operational costs including 28 civilian authorizations at Fort Sill, OK Test Directorate
- 3162 Operational costs including 34 civilian authorizations at Fort Huachuca, AZ Test Directorate
- 2453 Operational costs including 40 civilian authorizations at Fort Bragg, NC Test Directorate
- 3171 Operational costs including 37 civilian authorizations at Fort Bliss, TX Test Directorate
- 11283 Operational costs including 18 civilian authorizations at Operational Threat Support Activity, Fort Bliss, TX
- 1557 Operational costs including 18 civilian authorizations at Test and Evaluation Coordination Offices
- Total 41004

B. Project Change Summary

	FY 1997	FY 1998	FY 1999
FY 1998/1999 President's Budget	14631	37207	32453
Appropriated Value	14944	37207	
Adjustments to Appropriated Value	-458	-2295	
FY 1999 President's Budget	14486	34912	41004

Change Summary Explanation:

Funding: FY 1999 increase (+8551) - Increase funding reflects the reprogramming of manpower and funds previously programmed and budgeted in the OMA appropriation for the Operational Threat Support Activity (+8,351) and civilian pay raise adjustment (+200).

	COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Total Cost
D001 OPTEC IOTE		15726	20608	20486	15803	14990	14887	15348	Continuing
<p>A. Mission Description and Justification: Project D001 - OPTEC IOTE: This project finances the direct costs of planning and conducting operational testing on major and non-major materiel systems (ACAT II-IV), including Multi-Service systems (all ACATs) and Joint tests (JT). It funds those costs directly attributable to conducting an early user test and evaluation (EUTE), a limited user test (LUT), a technical test (TT), or an initial operational test and evaluation (IOTE) on major and non-major materiel systems. Test funding for ACAT I systems is programmed with the PE funding development of each system. Operational testing is conducted under conditions, as close as possible, to those encountered in actual combat with typical user troops trained to employ the system. OPTEC provides Army leadership with an independent test and evaluation of effectiveness, suitability, and survivability of the system. Funding increase beginning in FY 1998 is necessary to execute ACAT II-IV, Automated Information Systems (AIS), and joint test workload scheduled for FY 1998-1999.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> • 85 SSP (IOTE) - Strategic Sealift Program • 7 IRV (IOTE) - Improved Recovery Vehicle • 144 EPLRS (IOTE) - Enhanced Position Location Reporting System • 186 TWS (IOTE) - Thermal Weapon Sight • 949 ISYSCON (IOTE) - Integrated System Control • 429 GBCS LIGHT IOT&E (IOTE) - Ground Based Common Sensor Light • 4157 BIDS P31 (IOTE) - Biological Integrated Detection System Pre-Planned Product Improvement • 855 PKG 11 (IOTE) - Biological Integrated Detection System • 153 ITAS (IOTE) - Improved Target Acquisition System • 25 LW (IOTE) - Land Warrior • 42 SOFTACS / STAR-T (IOTE) - Special Operations Forces Tactical Assured Connectivity System/SHF Tri-Band • 128 RSCCE (IOTE) - Replacement Satellite Configuration Control Element • 335 UH-60Q (IOTE) - Utility Helicopter 60Q • 408 BFIST #2 (LUT) - Bradley Fire Support Team • 351 BFIST (XM7) #1 (LUT) - Bradley Fire Support Team (XM7) • 49 CCTT (TT) - Close Combat Tactical Trainer • 775 CCTT (IOTE) - Close Combat Tactical Trainer

D985	Concepts Evaluation of Materiel	10498	16222	0	0	0	0	0	Continuing	Continuing		
<p>A. Mission Description and Justification: Project D985 - Concepts Evaluation of Materiel: The Concepts Experimentation Program (CEP) is a key innovative tool which provides TRADOC battle labs and schools the ability to capitalize on emerging technologies, emerging warfighting concepts, and new materiel initiatives. Program growth reflects increased emphasis on Force XXI initiatives and accelerated acquisition methods. Funds are used to acquire, lease or fabricate equipment to conduct experiments to determine military utility or potential to satisfy Army Doctrine, Training, Leader Development, Organization, Materiel and Soldiers (DTLOMS) needs. TRADOC battle labs build on initiatives with greatest potential payoff. Program is also used as a first look at emerging technologies and emerging warfighting concepts that have the potential to support the Army's Force XXI design needs. As the Army moves toward Force XXI, the critical task of designing the force around information requires major investment in information-age capabilities. Constructive, virtual, and live simulations are used to examine warfighting concepts across DTLOMS domains. They cover all aspects of command and control, lethality, survivability, and tempo and are essential to technology insertion in future Army systems and force structure. Beginning in FY1999 funding transferred to PE 065326, Project D308 Battle Lab Experimentation.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> • 115 MATTRACKS • 130 Encapsulating Foam for Cover and Assault Lane Breacher • 97 Skid Steer • 41 Light Assault Treadway Bridge • 70 Assault Breach Marking System • 5 Removable Ripper Tooth for the Combat Earthmover • 160 Seismic Detection in Military Operations • 60 Field Deployable Soil Probe for Military Prediction • 80 Modernized Cold Weather Road Construction Technology • 99 Ground Penetrating Radar-Soil Freeze or Surface Thaw • 50 Programmable Digital Radio (PDR) Aircraft Certification • 150 Programmable Digital Radio (PDR) Demonstration • 100 Simulations-Protect the Force/EADSIM • 78 Telepathy Battle Command • 100 Modular Causeway System (MCS) Sea State 3 Upgrade

D987	OPTEC Instrumentation Sustainment & Development	4190	5065	4830	5740	5747	6108	6122	Continuing	Continuing	

A. Mission Description and Justification: Project D987 - OPTEC Instrumentation Sustainment & Development: This project provides for the technical upgrade and maintainability of essential instrumentation to achieve cost effective data collection, telemetry, and processing capability for support of robust and credible operational tests as required by the DoD and Congress. Increased sophistication of new weapon and communication and control systems demand the need to capture test data at greater rates and increased volumes and then to reduce the information rapidly to only those essential to effectively evaluate the test. As digitization of the battlefield continues, this effort allows OPTEC to modernize and develop its non-major instrumentation allowing it to be less intrusive, more reliable and more robust in terms of integrating combat simulation capability into operational tests. The goal is to expand measurement and test control capability while still reducing future test costs. The Mobile Automated Instrumentation Suite (MAIS) will serve as a platform for integrating new instrumentation capability in support of Real-Time Casualty Assessment (RTCA) which measures simulated attrition of forces during simulated battlefield engagements. This project supports multiple efforts associated with MAIS and separate, independent initiatives that lead to improved command and control, increased mobility, and expanded remote data collection at various tactical sites with transmit capability to central receiving, control, and evaluation stations at various test directorates. These directorates are located at Fort Hood, TX; Fort Bliss, TX; Fort Huachuca, AZ; Fort Sill, OK; and Fort Bragg, NC.

FY 1997 Accomplishments:

- 103 Video Telemetry and Recording System (VTRS) (Technical Insertion - Performance Increase)
- 400 Multimedia Data Transfer (Technical Insertion - Performance Increase)
- 700 Mobile Automated Instrumentation Suite / Field Data Collector Interface (Technical Insertion - Performance Increase)
- 200 Fiber optic Range Network (Technical Insertion - Performance Increase)
- 369 Mobile TEXCOM Experimentation Center / Mobile Automated Instrumentation Suite Merger (Technical Insertion - Performance Increase)
- 330 Automated Intelligence / Electronic Warfare Test System First Generation Upgrade (Technical Insertion - Performance Increase)
- 7 Hi-Speed Telemetry System (Quick Reaction in Support of Critical Operational Test)
- 111 Data Collection Vehicles (Quick Reaction in Support of Critical Operational Test)
- 193 Telemetry System Upgrade (Product Improvement)
- 84 Simulation Testing Operations Rehearsal Model (Technical Insertion - Performance Increase)
- 134 Improved Field Data Collector Test (Quick Reaction in Support of Critical Operational Test)
- 325 Data Management Environment Modern (Technical Insertion - Performance Increase)
- 350 Mobile Automated Instrumentation Suite Land Warrior Dismounted Troop (Technical Insertion - Performance Increase)
- 21 Traveling Wave Tube Amplifier Repair (Product Improvement)

BUDGET ACTIVITY		PE NUMBER AND TITLE								PROJECT	
6 - Management and Support		0605716A Army Evaluation Center								D302	
	COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost	
D302	Army Evaluation Center	0	0	25526	23992	25745	26303	26877	Continuing	Continuing	

A. Mission Description and Budget Item Justification This is not a new start. Funds were realigned from PE 0605601A Project D699, PE 0605604A Project D734, and PE 0605706A, Project M542 in support of the Army consolidation of the materiel evaluation function under the U.S. Army Operational Test and Evaluation Command (OPTEC). Also reflects the realignment of the OPTEC Operational Evaluation Command (OEC) previously funded in the Operations and Maintenance, Army (OMA) appropriation. These realignments complete the consolidation of Army Evaluation. Project D302 funds the Army Evaluation Command (AEC) mission of evaluation and test design. AEC is the Army's technical and operational evaluator of developmental systems and tests for all Army acquisition programs. AEC provides integrated technical and operational evaluations and continuous evaluation of assigned Major Defense Acquisition Programs (MDAP), Major Automated Information Systems Review Council (MAISRC), and In-Process Review (IPR) programs for major milestone decisions, materiel changes, and materiel releases in support of the Army Acquisition Executive and force development. AEC develops the evaluation strategy, designs technical and operational tests, and evaluates the test results to address the effectiveness, suitability, and survivability factors pertinent to the decision process, such as: Critical Operational Issues & Criteria (COIC), system performance, soldier survivability, performance in countermeasures, system survivability, reliability, supportability, etc. AEC has a lead role in the planning and execution of the Army live fire tests through its evaluation and test design responsibilities. This project funds the salaries of civilian employees assigned to the evaluation and test design missions. This project does not finance test facility operations, test instrumentation or test equipment.

FY 1997 Accomplishments: Funded in PE 0605601A Project D630, PE 0605604A (funded by SLAD under various projects), PE 0605706A Projects D026 and M541, and PE 0121015 (OMA).

FY 1998 Planned Program: Funded in PE 0605601A Project D699, PE 0605604A Project D734, and PE 0605706A Project M542.

FY 1999 Planned Program:

- 25526 Provide integrated technical and operational evaluations and continuous evaluation of assigned Major Defense Acquisition Programs (MDAPs), Major Automated Information Systems Review Council (MAISRC), and In-Process Review (IPR) programs for major milestone decisions, materiel changes, and materiel releases in support of the Army Acquisition Executive and force development. Develop the evaluation strategy, design technical and operational tests and evaluate the test results to address the Effectiveness, Suitability, and Survivability factors pertinent to the decision process such as: Critical Operational Issues and Criteria (COIC), system performance, soldier survivability, performance in countermeasures, system survivability, reliability, availability, maintainability, supportability, etc. As the Army lead for Live Fire Test and Evaluation, plan and execute the Army Live Fire Test and Evaluation program for required developmental systems. Prepare integrated System Evaluation Plans and conduct integrated technical and operational evaluations for all Army weapon systems. Major efforts include: Forward Area Air Defense (FAAD-C21), Suite of Integrated Infrared

Appropriated Value	0	0																				
Adjustments to Appropriated Value																						
FY 1999 President's Budget	0	0	25526																			
<p>Change Summary Explanation:</p> <p>Funding: FY1999 Funds (+25526) - Increase of 23157 reflects the realignment from PE 0605601A Project D699 Non-Major Systems Test Design and Evaluation (1966), PE 0605604A Project D734 Survivability Evaluation (1180), and PE 0605706A Project M542 Major Systems Test, Design and Evaluation (2001) into this newly established PE. These realignments complete the consolidation of Army Evaluation under OPTEC. Increase of 2369 reflects AEC's involvement early on during system development, enabling early feedback to materiel developers and reducing overall acquisition costs and timelines caused by problems discovered after significant costs have been sunk into system design.</p>

Mission Description and Budget Item Justification: This program funds the continued operation of non-Army Management Headquarters Activities (AMHA) management and administrative functions at U.S. Army Research, Development and Standardization Groups overseas, Army Research, Development, Test, and Evaluation (RDTE) commands, centers and activities required to accomplish overall assigned general research and development missions and international research and development not directly related to specific research and development projects. Project M881 reflects a glide path in response to Army infrastructure drawdown initiatives. The Standardization Groups play an integral role in the U.S. Army efforts for international cooperative research & development and interoperability and fulfill international memorandum of understanding requirements (especially the American, British, Canadian and Australia mission). Includes research and development effort directed toward support of installations or operations required for general research and development use and therefore is appropriate to Budget Activity 6.

<p>A. Mission Description and Justification: Project M881 RDT&E Command/Center/General Administrative Support: Supports the non-AMHA management and administrative functions at the following Army RDT&E commands, centers and activities: U.S. Army Research Institute for the Behavioral and Social Sciences, Alexandria, VA; U.S. Army Armament Research, Development and Engineering (RDE) Center, Picatinny Arsenal, NJ; U.S. Army Research Laboratory, Adelphi, MD; U.S. Army Aviation and Missile RDE Center, Redstone Arsenal, AL; U.S. Army Tank-Automotive RDE Center, Warren, MI; U.S. Army Chemical Biological Defense Command, Aberdeen Proving Ground, MD; U.S. Army Communications-Electronics Command RDE Center, Ft. Monmouth, NJ; U.S. Army Test and Evaluation Command, Aberdeen Proving Ground, MD; and provides funding for salaries, administrative support other than that provided by Department of State agreements to include rent, utilities, guards, and travel for five international RDT&E Standardization Groups located in Australia, Canada, France, Germany, and United Kingdom. This project also provides continued operations of contracting and acquisition management and related administrative functions performed by the Army Medical Research Acquisition Activity (USAMRAA) in support of the Army Medical Research and Materiel Command (USAMRMC) RDT&E programs and its tenant organizations at Ft. Detrick, MD, including medical materiel procurement contracts for the U.S. Army Medical Materiel Agency and the Office of the Surgeon General, Army. The project also provides funding for the headquarters activities at the USAMRMC, Ft. Detrick, Maryland to (1) develop medical RDT&E program policy and guidance; (2) perform long range planning, programming and budgeting; (3) provide the management of resources; and (4) conduct program performance review and evaluation for the RDT&E appropriation.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> 45136 Provided continued operation of management and administrative functions at a level consistent with mission requirements and support needs at Army non-AMHA RDT&E commands, centers and activities. 3895 Continued operation of five Standardization Groups in support of international R&D and rationalization, standardization and interoperability missions. Funded salaries, travel and contracts for non-Department of State administrative support. 7129 Continued to provide acquisition management functions in support of USAMRMC RDT&E programs and its tenant organizations, Ft. Detrick, MD, including medical materiel procurement contracts, and procurement of biological defense vaccines. Funds the operation of the USAMRMC HQ activities which administers the medical research, development, and acquisition program to sustain military technology superiority. <p>Total 56160</p> <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> 44036 Provide continued operation of management and administrative functions at a level consistent with mission requirements and support needs at Army non-AMHA RDT&E commands, centers and activities. 3763 Continue operation of five Standardization Groups in support of international R&D and rationalization, standardization and interoperability missions. Funds salaries, travel and contracts for non-Department of State administrative support.

A. Mission Description and Budget Item Justification: This is not a new start. The goal of this program is to expand worldwide allied standardization and interoperability through cooperative research and development (R&D) and technology sharing. This program partially funds the travel costs and administrative support (studies, analysis, interpretation, equipment, etc.) required to participate in international fora, such as the North Atlantic Treaty Organization (NATO) Army Armaments Group (NAAG), and to pursue new cooperative R&D initiatives and international cooperative agreements such as memoranda of understanding. This program also includes: the United States' share of costs of the NATO Civil Budget, Chapter IX, which funds the NATO Industrial Advisory Group (NIAG) and the Special Fund for Cooperative Planning; partially funds the Four Power Senior National Representatives Army (SNR (A)), the American, British, Canadian, Australian (ABCA) Standardization Program, the Technical Cooperative Program, bilateral staff talks, and Army armaments working groups with many nations. This project supports general research and development activities and since it is not allocable to specific R&D missions is appropriately funded in Budget Activity 6.

FY 1997 Accomplishments: Program was funded in PE 0605802A, Project M798.

FY 1998 Planned Program: Project was not funded in FY1998.

FY 1999 Planned Program:

- 414 Fund domestic and international travel linked to scientific and technological exchanges having military application and mutual benefits to the United States and its Allies.
- 750 Fund the United States' share of the NATO Civil Budget, Chapter IX (Defense Support Programs).
- Total 1164

Mission Description and Budget Item Justification: This program provides for upgrading the accuracy, timeliness, availability, and accessibility of scientific, technical, and management information at all levels of Army Research and Development (R&D). This includes initiatives to improve information derivation, storage, access, display, validation, transmission, distribution, and interpretation. This program addresses the need to increase the competitiveness and availability of scientific, engineering, and technical skills in the DoD and National workforce. It accomplishes this through outreach programs that provide direct working experience for high school students in Army laboratories, thereby exposing these students to the working world of science and engineering. Funding under this program provides for the conduct of analyses, using behavioral science-based analytic tools, to provide policy and decision makers with soldier oriented recommendations concerning manpower, personnel and training issues. This program also provides for science advisors to Commanders-in-Chief (CINCs) and major Army commands and engineering teams to directly solve field Army technical problems. Coordination of this program with other Services is achieved through interservice working groups. The work in this program element is consistent with rigorous peer review and the Army Science and Technology Master Plan (ASTMP). These programs are accomplished under the management of the Army Research Laboratory, the Army Materiel Command, the Army Research Office, the Army Research Institute, the Army Corps of Engineers and the Information Management Office. The projects in this Program Element include management support of Science and Technology efforts and therefore are correctly placed in Budget Activity 6.

UNCLASSIFIED

UNCLASSIFIED

RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)										DATE	February 1998
BUDGET ACTIVITY		PE NUMBER AND TITLE								PROJECT	
6 - Management and Support		0605803A Technical Information Activities								DC16	
	COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost	
DC16	Field Assistance in Science and Technology	2477	2694	2734	2793	2848	2923	2999	Continuing	Continuing	
<p>A. Mission Description and Justification: This program focuses Army Materiel Command (AMC) resources to rapidly identify and solve field Army technical problems affecting improved readiness, safety, training, and operations and support (O&S) cost reductions. The Commanding General, AMC, institutionalized AMC Field Assistance in Science and Technology (FAST) in 1988 to plan for and allocate all AMC FAST program funding for projects to support CINCs and commanders and to operate the director's office. FAST tours provide major professional growth for scientists and engineers. Science advisers are recruited from AMC engineering centers to serve Commanders-in-Chief (CINCs) and major Army commanders world-wide and are supported by assigned Quick Reaction Coordinators (QRCs) within each AMC engineering center. All costs associated with science advisor assignments are funded by AMC subordinate commands who supply the science advisers for two to three year tours. FAST manages a level of effort type project with most projects recouping many times their cost in O&S cost savings.</p>											
<p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> • 2477 - Provided continuous activity on over 280 FAST projects. Defined, tested and recommended technological solutions to materiel problems identified by CINCs worldwide and prepared operational needs statements and test results for the highest priority programs. - Provided professional growth opportunity for 20 science advisers on two year and three year tours and 40 FAST Junior scientists and engineers on two to eight week tours. - Provided professional growth opportunity for 70 personnel in the Scientists and Engineers Field Experience with Soldiers (SEFEWS) program. <p>Total 2477</p>											
<p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> • 2638 - Provide continuous activity on over 280 FAST projects. Define, test and recommend technological solutions to materiel problems identified by CINCs worldwide and prepare operational needs statements and test results for the highest priority programs. - Provide professional growth opportunity for 20 science advisers on two year and three year tours and 40 FAST-junior scientists and engineers on two to eight week tours. - Provide professional growth opportunity for 70 personnel in the SEFEWS program. • 56 - Small Business Innovation Research/Small Business Technology Transfer Programs. <p>Total 2694</p>

<p>A. Mission Description and Justification: The Board on Army Science and Technology (BAST) was created in 1982 by the National Research Council (NRC) through its Commission on Engineering and Technology Systems at the request of the Under Secretary of the Army. The BAST designs, conducts, and supervises the NRC's Army-related studies of scientific and technological issues. As such, the BAST defines problems, brings together leading experts to study them, and most importantly, draws conclusions, identifies alternatives and implications, and makes recommendations as appropriate. The major activities of this group include board meetings, special requests, standing committees, study committees and workshops and seminars.</p>											
<p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> 937 - Provided technical expert support for forecast of Army science and technology needs and respond to immediate science and technology requirements. - Provided experts to participate in peer reviews for annual In-House Laboratory Independent Research (ILIR) and Research and Development Activity (RDA) awards review. - Initiated BAST studies on "Compact Power" and "Logistics Demand".

COST (In Thousands)		FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost	
M720	Technical Information Functional Activities	2697	3036	2970	2976	3052	3133	3215	Continuing	Continuing	
<p>A. Mission Description and Justification: Technology transfer activities to support acquisition, storage, and utilization of technical information for both military and domestic applications. Activities supported are: Army participation in the Defense Technical Information Center (DTIC) Work Unit Information Summary (WUIS) database; Army support for the Federated Laboratory Consortium (FLC); the Army Science Board; administration of the Army's Small Business Innovative Research (SBIR) and Small Business Technology Transfer Pilot Program (STTR) in accordance with the "Small Business Research and Development Enhancement Act of 1992". These costs are funded here because the Act prohibits use of PE 0605502 for funding administrative costs, studies and analyses to support the Acquisition Corps acquisition and retention of scientists and engineers and improvement of productivity of laboratories and centers. Technology transfer activities make technical information available to both the public and private sectors to reduce duplication in R&D programs and to increase competitiveness in the U.S. business community. In addition this project provides funding for patent fees and patent legal expenses for all U. S. Army Materiel Command (AMC) subordinate commands and laboratories. The requirement to fund this effort is a result of the Omnibus Budget Reconciliation Act requiring the U. S. Patent and Trademark Office to become a completely user-fee funded agency.</p>											
<p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> • 995 - Continued managerial, programming, database, clerical and personnel support to process, store, control and report the WUIS, on DD1498's. - Provided Army funding support for FLC as required by Public Law 99-502. - Provided administrative and contractual support for the ASB. • 1702 - Provided administrative support for SBIR/STTR programs. - Provided Army Science and Technology Reports. - Provided funding for patent fees and patent legal expenses for AMC commands and laboratories. - Provided funding for Army Science and Technology Summer Study and awards. - Provided funding for support of Government/Industry Data Exchange Program (GIDEP). <p>Total 2697</p>											
<p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> • 1044 - Continue managerial, programming, database, clerical and personnel support to process, store, control and report the WUIS, on DD1498's. - Provide Army funding support for FLC as required by Public Law 99-502. - Provide administrative, contractual and travel support for the ASB. • 1916 - Provide administrative support for SBIR/STTR programs. - Provide Army Science and Technology Reports. - Provide funding for patent fees and patent legal expenses for AMC commands and laboratories.

	COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost	
M729 Youth Science Activities		1962	2283	2089	2109	2123	2137	2133	Continuing	Continuing	
<p>A. Mission Description and Justification: Supports science activities to encourage over 100,000 high school youths to develop interest and achieve higher levels in science, engineering, and mathematics. These activities are consolidated within this program to "present the Army" to a potential pool of technical talent to fill future Army needs. No other program fulfills this long-range Army goal. The joint Army/Navy Washington regional area Science and Engineering Apprenticeship Program (SEAP) has been included in the overall effort. This provides an eight week hands-on learning experience for high school students working with bench level scientists within Army laboratories in hopes of encouraging more of them to enter scientific fields of study in the future. This program enhances the National Laboratory Science and Engineering pool, which in turn supports Defense industry, and laboratory needs.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> 1962 - Continued to foster high school student interest in science, mathematics, engineering and computer science, nationally, by sponsoring Junior Science and Humanities Symposium (JSHS), International Mathematics Olympiad (IMO), and Research and Engineering Apprentice Program (REAP). - Continued the Joint Army/Navy Washington Regional Area SEAP and increased Army Laboratory/RDE Center sponsorship of students. - Continued special tutorial programs for Native Americans, African Americans, and Spanish-speaking Americans designed to increase their chances of attending and completing engineering and/or science curriculum at the university level. - Continued the West Point cadet research internship program to enhance cadet training through field experience within Army research laboratories and centers. <p>Total 1962</p> <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> 2226 - Continue to foster high school student interest in science, mathematics, engineering and computer science, nationally, by sponsoring: JSHS, IMO, and REAP. - Continue the Joint Army/Navy Washington Regional Area SEAP and increase Army Laboratory/RDE Center sponsorship of students. - Continue special tutorial programs for Native Americans, African Americans, and Spanish-speaking Americans designed to increase their chances of attending and completing engineering and/or science curriculum at the university level. - Continue the West Point cadet research internship program to enhance cadet training through field experience within Army research laboratories and centers. 57 - Small Business Innovation Research/Small Business Technology Transfer Programs. <p>Total 2283</p>

<p>A. Mission Description and Justification: The Net Assessment Directorate develops and coordinates net assessments of the standing, trends, and future prospects of U.S. military capabilities and military potential in comparison with those of other countries or groups of countries so as to identify emerging or future threats or opportunities for the United States. This includes, as required, net assessments of: (1) current and projected U.S. and foreign military capabilities by theater, region, function, or mission; and (2) specific current and projected U.S. and foreign capabilities, operational tactics, doctrine, and major categories of weapon systems. The Directorate provides for the preparation of net assessments by the Chairman of the Joint Chiefs of Staff; develops, advises, and consults on the net assessment portion of the Annual Report of the Secretary of Defense to the President and Congress; provides guidance and staff assistance in the development of national net assessments by the National Security Council and acts as the primary Office of the Secretary of Defense (OSD) focal point for joint efforts with the Intelligence Community to produce net assessments; and provides support for the improvement and development of net assessments within the Department of Defense.</p> <p>FY 1997 Accomplishments: Program funded in OSD in FY 1997.</p> <p>FY 1998 Planned Program: Program funded in OSD in FY 1998.</p> <p>FY 1999 Planned Program:</p> <ul style="list-style-type: none"> 800 - Develop an all source Information Warfare (IW) assessment of U.S. capabilities against potential competitors, which will assist in the development of and IW model. - Develop ideas and strategies for successfully institutionalizing the process of efficient and effective transformation from today's military force structure to a force that is optimized for potentially very different long-term requirements. - Continue multi-year open literature research effort to identify current and evolving foreign perspectives of the Revolution in Military Affairs (RMA), including foreign views of the concept, nature and effects of the RMA; assessment of their ability and desire to participate; implications for existing defense infrastructure; risks associated with the changing conduct of warfare; and expected costs of revolutionary change. <p>Total 800</p> <p>B. D730	Personnel and Training Analysis Activities	3233	987	2077	2134	2291	2347	2404	Continuing	Continuing	
<p>A. Mission Description and Justification: This project provides for the application of behavioral science-based analytical technologies by the U.S. Army Research Institute (ARI) for the Behavioral and Social Sciences to current and near-term soldier-related issues. The program is focused on policy issues to enhance soldier performance, and provides the Army a unique capability for addressing such issues as the effects of training on individual and unit readiness, the personnel costs of alternative force structures and the effects of a smaller Army on retention and readiness of quality soldiers. Requirements for studies and analyses for critical personnel and training issues of immediate importance are solicited on an annual basis.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> 3233 - Developed PC-based model and system to improve job/soldier skills match for use in recruiting and basic training/assignments. - Identified capabilities and actions that can be automated to reduce personnel costs associated with exercise control and feedback functions in a live training environment. - Conducted Army assessment of current soldier attitudes and concerns with regard to the Army's six imperatives. - Analyzed training requirements to enhance skill proficiency for effective backup operations for the digitized battlefield when systems are degraded or disrupted. - Developed plan for longitudinal investigation of the causes of first-term attrition. <p>Total 3233</p> <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> 963 - Derive the information requirements for trainers to control force-on-force simulated battles, and provide the most beneficial feedback to units. - Determine the Force XXI leader training requirements for aviation battle staffs. - Develop method for selection of vehicle drivers to improve safety. - Determine situations when subject-matter-expert ratings of training effectiveness can be substituted for resource-intensive field trials. - Small Business Innovation Research/Small Business Technology Transfer Programs. <p>Total 24 987</p> <p>FY 1999 Planned Program:</p> <ul style="list-style-type: none"> 2077 - Continue analyses of training issues identified by Training and Doctrine Command (TRADOC). - Conduct studies on personnel issues identified by the Chief of Staff of the Army (CSA) and Deputy Chief of Staff for Personnel (DCSPER). <p>Total 2077</p> <p>Project D730</p>

<p>A. Mission Description and Justification: This project provides for the engineering of Army acquisition process improvement through the application of decision support and expert information systems. This project provides funds to conduct analysis and evaluation of alternative acquisition strategies using techniques such as value-added analysis. Supports integrated management activities such as Horizontal Technology Integration and Army Ballistic Missile Defense. This project also provides an environment for the analysis and evaluation of new information technologies, concepts and applications in support of the Army acquisition community's dynamic requirements and for the engineering of Army acquisition process improvement through the application of decision support and expert information systems.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> 2078 - Developed a simulation and logical modeling test and evaluation environment that provides a prototype development tool in support of technology base initiatives. - Designed application program and user interface utilities for executive level information systems that offer Standard Query Language (SQL) services to Army Acquisition Corps (AAC) corporate and global databases. - Continued analysis of acquisition program financial programming and budgeting requirements. Initiated development of Weapon Systems Handbook, Analytic/Technical Support for Army Support for Army Science and Technology Programs, Long-Range Planning and Policy Analysis, Resource Allocation Analysis, Cost Tracking and Analysis, Cost Effectiveness and Database Management/Financial Analysis, Synthetic Aperture Radar (SAR) Technology Application Concept Research/Analysis. <p>Total 2078</p> <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> 2084 - Continue development of simulation and logical modeling test and evaluation environment that provides a prototype development tool in support of technology base initiatives, and beta test selected modules. - Validate application programs and user interface utilities for executive level information systems that offer SQL services to AAC corporate and global databases. - Continue analysis of acquisition program financial programming and budgeting requirements. Continue development of Weapon Systems Handbook, Analytic/Technical Support for Army Support for Army Science and Technology Programs, Long-Range Planning and Policy Analysis, Resource Allocation Analysis, Cost Tracking and Analysis, Cost Effectiveness and Database Management/Financial Analysis, SAR Technology Application Concept Research/Analysis. 54 - Small Business Innovation Research/Small Business Technology Transfer Programs. <p>Total 2138</p>

Mission Description and Budget Item Justification: This Program Element supports continuing technology investigations. It provides a coordinated tri-service mechanism for the collection and free exchange of technical data on the performance and effectiveness of all non-nuclear munitions and weapons systems in a realistic operational environment. It provides for NATO interchangeability testing; joint munitions effectiveness manuals used by all services; development of standardization agreements (STANAGS) and associated Manuals of Proof and Inspection (MOP); operation of the North American Regional Test Center (NARTC); evaluation of demilitarization methods for existing conventional ammunition; evaluation of useful shelf life, safety, reliability and producibility of pyrotechnic munitions; and improvement of explosives safety criteria for DOD munitions via the DOD Explosives Safety Board. Pyrotechnic Reliability and Safety (M296) supports pyrotechnic research, development and testing to identify, characterize and resolve reliability, safety, storage and manufacturing issues that impact production availability and field use of pyrotechnics. It will result in the development and demonstration of new, safe, reliable and environmentally acceptable munitions. Munitions Survivability and Logistics (D297) will make Army units more survivable by testing and demonstrating munitions logistics system solutions that prevent or minimize catastrophic explosive events and accelerate ammunition resupply. Projects in this Program Element support studies and analyses of numerous Army and Joint-Services programs and are correctly placed in Budget Activity 6.

D297 Munitions Survivability & Logistics		0	0	0	2500	2500	2500	2500	Continuing	Continuing
<p>A. Mission Description and Justification: This project makes Army units more survivable by investigating, testing and demonstrating munitions logistics system solutions that prevent or minimize catastrophic explosive events and accelerate ammunition resupply. Key thrusts are munitions storage area survivability, insensitive munitions technology integration, weapon system rearm, explosive incompatibilities in strategic configured loads and advanced packaging and distribution system enhancements. Within each thrust, a broad array of solutions will be identified, tested and evaluated against developed system measures of effectiveness. Optimum, cost effective solutions that enable the rapid projection of lethal and survivable forces will be demonstrated. The early stages of force deployment are especially critical. Theater ammunition storage areas are vulnerable and present the enemy with lucrative targets. These areas and distribution nodes contain the only available munitions stocks in theater, and loss of these munitions could cripple the force, jeopardize the mission and result in high loss of life. This project mitigates vulnerabilities and ensures a survivable, effective fighting force.</p> <p>FY 1997 Accomplishments: Project not funded in FY 1997.</p> <p>FY 1998 Planned Program: Project not funded in FY 1998</p> <p>FY 1999 Planned Program:</p> <ul style="list-style-type: none"> • 1000 Complete design architecture of prototype demonstration level munitions survivability software that allows soldiers to quickly design survivable and efficient ammunition storage sites • 1115 Evaluate Insensitive Munitions (IM) technologies/solutions (energetics, packaging, limited redesign of system components), apply cost effective improvements to specific artillery, mortars, mine and missile ordnance which are not IM compliant, and conduct testing to validate solutions • 385 Design and fabricate advanced composite cylindrical and rectangular ammunition packaging containers that significantly reduce weight, provide rapid access, and increase environment environmental protection and a closure mechanism for next generation large diameter cylindrical containers. Validate thermal model codes by testing materials/configuration changes that reduce thermal loading on munitions <p>Total 2500</p>

Mission Description and Budget Item Justification: This program ensures that resources are available to fund actions specifically required to protect or enhance natural and cultural resources, preserve access to improved and unimproved training areas, and make necessary repairs to minimize erosion and otherwise rehabilitate lands and waters at Army RDTE installations, laboratories and test ranges. No Operation and Maintenance, Army (OMA) appropriation funds are budgeted for environmental conservation efforts at RDTE facilities. It focuses on compliance with natural and cultural resource laws and on responsible management of natural and cultural resources to ensure resources are used wisely and are protected. It finances studies and surveys to identify, inventory, and manage natural (endangered or threatened species, other wildlife, timber, agricultural lands, training areas, etc.) and cultural resources and evaluation of the resources so identified and inventoried; Integrated Training Area Management; preparation of natural and cultural resource management plans; design, construction, maintenance or repair costs specifically required to restore, improve or maintain natural or cultural resources; supplies and equipment required to carry out applicable natural and cultural resources management activities. It includes appropriated RDTE funds attributable to fish, wildlife, agricultural outleaving and timber management activities. It does not include normal maintenance required for appearance, including landscaping, or normal building maintenance associated with present day, non-cultural uses of historic buildings. Army defines environmental effort as: Class O - Project needed to cover essential administrative, personnel, and other costs required to manage environmental activities and monitor environmental conditions associated with compliance. Class I - support compliance with legally binding agreements or judgments under applicable Federal, State, local or host nation natural or cultural resource environmental laws; correct deficiencies cited in an inspection or notice of violation by a natural or cultural resource regulatory agency, or host nation equivalent; correct deficiencies where a statutory or regulatory deadline has passed; Class II - projects required to comply with an established natural or cultural resource standard, and deadline for compliance is in the future. Includes effort directed toward support of installations or operations required for general research and development use and therefore is appropriate to Budget Activity 6.

Mission Description and Budget Item Justification: This program funds the non-research portion of the Army's RDTE funded environmental pollution prevention program. It finances primarily test and evaluation pollution prevention efforts addressing environmental compliance and mission readiness issues affecting Army weapon systems; supporting industrial facilities; and RDTE funded installations, laboratories and test ranges. Pollution prevention is any action designed to reduce or eliminate (rather than control or treat), through source reduction actions, the procurement and use of hazardous materials and the generation of hazardous waste; more efficient use of natural resources; recycling; and/or reduced emissions of toxins and other waste to the environment. Acquisition pollution prevention addresses the adverse impact of hazardous materials and hazardous waste on the operational readiness of Army weapon systems and facilities. Issues include prove-out/engineering of alternatives to (1) ozone-depleting chemicals and (2) hazardous and toxic chemicals and materials used in weapon system fire protection, cooling and refrigeration applications, manufacturing and maintenance processes and specialized test practices throughout the weapon system life cycle. These activities account for approximately 90 percent of the hazardous waste generated by the U.S. Army. This program includes the review and revision of standardized technical documentation containing design, procurement and maintenance requirements, and procedures supporting materiel procurement such as the Joint Group for Acquisition Pollution Prevention. No Operations and Maintenance, Army (OMA) funds are programmed for these purposes. Projects under this program meet Army definitions: Class O - Projects needed to cover essential administrative, personnel, and other costs required to manage environmental activities and monitor environmental condition associated with compliance; Class I - support compliance with legally binding agreements or judgments under applicable federal, state, local or host nation environmental laws; Class II - projects required to comply with established standard, and deadline for compliance in the future. Class I and II projects comply with the Montreal Protocol, the Clean Air Act, the Pollution Prevention Act, the Emergency Planning and Right-to-Know Act, and Executive Order 12856 (and others). The program supports installations and operations required for general research and development use and therefore is appropriate to Budget Activity 6.

A. Mission Description and Justification: Project M0PP - Pollution Prevention - AMC Test Ranges: Resources in this project ensure an adequate level of funding for pollution prevention requirements, at Yuma Proving Ground (YPG), AZ; Garrison Aberdeen Proving Ground (GAPG), MD; Dugway Proving Ground (DPG), UT; and White Sands Missile Range (WSMR), NM. These operations are critical to the infrastructure and execution of the Army testing mission.

FY 1997 Accomplishments:

- 517 Funded Class O, Class I and Class II pollution prevention projects such as reporting of Toxic Release Inventories, solid and hazardous waste reduction programs, implementation of storm water pollution prevention plans, purchase of spill response supplies and equipment, etc. Projects accomplished include Natural Gas Conversion of Boilers at APG; Development of Pollution Prevention Plan at DPG; and Natural Gas Refueling Station at WSMR.

Total 517

FY 1998 Planned Program: Project is not funded in FY 1998.

FY 1999 Planned Program:

- 1157 Fund Class O, Class I and Class II pollution prevention programs and projects. Programs such as reporting of Toxic Release Inventories, solid and hazardous waste reduction programs, implementation of storm water pollution prevention plans, purchase of spill response supplies and equipment, etc. Also fund Emergency Planning and Community Right-to-Know Act (EPCRA) compliance preventive projects. Include projects such as Chlorine Replacement - Water treatment and Closed Loop Washrack at GAPG; Implementation of Pollution Prevention Opportunities at DPG; Yard Waste and Tire Shredder at WSMR; and Executive Order 12856 Implementing Strategy at YPG.

Total 1157

A. Mission Description and Justification: Project M1PP - Pollution Prevention - AMC Major Subordinate Commands/Laboratories: Resources in this project ensure an adequate level of funding for pollution prevention requirements, at Army Research Laboratory (ARL), Adelphi, MD; Armament Research, Development and Engineering Center (ARDEC), Picatinny Arsenal, Dover, NJ; Soldier Systems Command (SSCOM), Natick, MA; and Army Research Laboratory Materials Technology Directorate (ARLMTD), APG, MD.

FY 1997 Accomplishments:

- 137 Funded Class I and Class II pollution prevention programs such as waste solvent replacement programs, purchase of alternate fuel vehicles, construction of sound-absorbing barriers, implementation of storm water pollution prevention plans, purchase of spill response equipment, etc.
- Total 137

FY 1998 Planned Program:

- 147 Fund Class I and Class II pollution prevention programs such as waste solvent replacement programs, purchase of alternate fuel vehicles, construction of sound-absorbing barriers, implementation of storm water pollution prevention plans, purchase of spill response equipment, etc.
- 4 Small Business Innovative Research/Small Business Technology Transfer (SBIR/STTR) Programs
- Total 151

FY 1999 Planned Program:

- 147 Fund Class I and Class II pollution prevention programs such as waste solvent replacement programs, purchase of alternate fuel vehicles, construction of sound-absorbing barriers, implementation of storm water pollution prevention plans, purchase of spill response equipment, etc.
- Total 147

<p>A. Mission Description and Justification: Project M8PP - Pollution Prevention - Acquisition Pollution Prevention: Develop and implement the Army Acquisition Pollution Prevention program to reduce requirements for hazardous materials and toxic chemicals used throughout the weapon system life cycle. The program supports Army compliance with the Montreal Protocol, the Clean Air Act, the Pollution Prevention Act and Executive Order 12856 (and others). This program primarily funds test and evaluation of environmentally acceptable alternative materials and processes used in weapon system design, testing, production, maintenance, operation and support. Issues directly affecting operational readiness of weapon systems and supporting facilities take top priority. Support is also provided for the Joint Group for Acquisition Pollution Prevention.</p>											
<p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> • 675 Toxicological Assessment of Alternative New Materials • 300 Program Management and Oversight • 1715 Tested and Evaluated Alternative Materials and Process Related to Paint Coating and Stripping Processes, Engine Oil Life Extension and Propylene Glycol Antifreeze • 300 Tested and Evaluated Aviation Materials and Processes (Non-Chromate Processes) • 610 Tested and Evaluated Alternative Materials and Processes for Missile Production (Powder Coating Processes and Alternative Fuels) • 250 Implemented Laser Stripping Processes for Helicopter Components • 1819 Tested and Evaluated Ammunition/Munitions Production • 500 Tested and Evaluated Alternative Battery Production • 450 Tested and Evaluated Chemical Biological Defense Test Procedures • 125 Tested and Evaluated Soldier System products • 200 Developed Solvent Substitution Selection Procedures • 1281 Developed Fire Safety Test Enclosure • 250 Funded Joint Group for Acquisition Pollution Prevention (JG-APP) • 1470 Implemented Alternative Processes at Depots, Arsenals and Ammunition Total 9945 											
<p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> • 302 Toxicological Assessment of Alternative New Materials • 350 Program Management and Oversight • 450 Test and Evaluation related to Ammunition/Munition Production (test procedures, tracer composition, sealing and coating)

Mission Description and Budget Item Justification: This program ensures that resources are available to fund legally mandated environmental compliance activities at U.S. Army RDTE installations, laboratories and test ranges. (No Operation and Maintenance, Army (OMA) appropriation funds are budgeted for environmental compliance efforts at RDTE facilities). It finances environmental staff salaries; minor construction, repair and upgrade of facilities to meet environmental standards, including waste treatment and disposal; radon abatement; repair and clean up of underground storage tank hazards; management of hazardous waste storage and disposal; permits and licensing fees; environmental training, plans and studies; and environmental monitoring and audits. Funds cost of complying with Federal Facility Compliance Agreements (FFCA) and other environmental agreements, and correcting notices of violation. It does not finance construction or repairs unrelated to environmental compliance or Defense Environmental Restoration Account (DERA) funded environmental restoration. In summary, this program provides for environmental quality control of current defense operations and disposal of hazardous waste incident to defense operations funded by the RDTE appropriation. Army defines environmental effort as: Class O - projects needed to cover essential administrative, personnel, and other costs required to manage environmental activities and monitor environmental conditions associated with compliance. Class I - support compliance with legally binding agreements or judgments under applicable federal, state, local or host nation environmental law; correct deficiencies cited in an inspection or notice of violation by a regulatory agency, or host nation equivalent; correct deficiencies where a statutory or regulatory deadline has passed; Class II - projects required to comply with an established standard, and deadline for compliance is in the future; Class III - salaries and training for environmental personnel and projects required to maintain/improve environmental quality, but where non-compliance is not imminent. Includes effort directed toward support of installations or operations required for general research and development use and therefore is appropriate for Budget Activity 6.

Mission Description and Budget Item Justification: This program element finances activities and functions necessary to provide facility related minor construction for U.S. Army RDTE installations, laboratories and test ranges. Minor construction includes: erection, installation, or assembly of a new real property facility; expansion, extension, alteration, conversion, relocation or replacement of an existing real property facility. Includes design costs directly associated with accomplishing a designated project undertaking. These projects substantially prolong the useful life of the facility and are all actually facility investments. Includes effort directed toward support of installations or operations required for general research and development use and therefore is appropriate to Budget Activity 6.

Mission Description and Budget Item Justification: This program element finances activities and functions necessary for maintenance and repair of real property at U.S. Army RDTE installations, laboratories and test ranges. Maintenance and repair of real property includes applicable expenses of cyclic and preventive maintenance and annual recurring repair incurred by building trade shops, construction units, grounds and pavements units, machine shops and contracts. Funding also provide for modernization of utility systems. These projects substantially prolong the useful life of the facility, and are all actually facility investments. Includes effort directed toward support of installations or operations required for general research and development use and therefore is appropriate to Budget Activity 6.

M744	Modernization of Utilities	0	9664	0	0	0	0	0	0	0																					
<p>A. Mission Description and Justification: Project M744 Modernization of Utilities. This is not a new start. It is the repair to an existing facility and system infrastructure. This project will finance the repair of the steam heat distribution system, Edgewood Area, Aberdeen Proving Ground, MD. This steam heat distribution system is 40 to 50 years old. Corrosion-related problems and other deficiencies are discharging condensate into the ground. Some areas of the system are beyond repair and must be replaced. The condensate piping is severely corroded and in extremely poor condition. Leaks and steaming are common place. Standing water exists in many manholes causing deterioration and excessive spalling and cracking, posing serious safety and environmental concerns. Boilers in the Central Plant (Vintage 1940) need to be replaced. They are inefficient, in poor shape and technically obsolete. The estimated \$9664K will repair the entire steam system.</p> <p>FY 1997 Accomplishments: Project not funded in FY 1997.</p> <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> • 9421 Repair steam heat distribution system, Edgewood Area, Aberdeen Proving Ground, MD • 243 Small Business Innovative Research/Small Business Technology Transfer (SBIR/STTR) Programs. <p>Total 9664</p> <p>FY 1999 Planned Program: Project not funded in FY 1999.</p> <p>B. Mission Description and Budget Item Justification: The Real Property Services program finances activities and functions necessary for operation of utilities (with the exception of communications). It includes purchase of electricity, operations of heating plants and water distribution and sewage systems. Element also finances the labor associated with real property support along with fire prevention, custodial service contracts, collection and disposal of refuse, pest control management, snow/ice and sand removal. It also supports the engineering, general management, supervision, mapping, planning, utilization inspection and other activities of a general nature performed by the Directorate for Public Works (DPW) both in-house and by contract. Includes effort directed toward support of installations or operations required for general research and development use and therefore is appropriate to Budget Activity 6.

<p>A. Mission Description and Justification: Project M0UU - Operation of Utilities & Other Engineering - AMC Test Ranges: This project funds the operations of utilities and other engineering services for the U.S. Army Materiel Command (AMC) installations assigned to the Test and Evaluation Command (TECOM), i.e. Aberdeen Proving Ground, MD; Dugway Proving Ground, UT; Yuma Proving Ground, AZ and White Sands Missile Range, NM. Funding provides for the utility costs and system operation of 1400 miles of electric distribution and 600 miles of water and sewer systems. Additionally, this project provides utilities services to the TECOM test mission and over 100 tenants and satellites that reside in 24 million square feet of facilities. Another major responsibility is the removal of snow and sand, extremely important to the safety of the workforce that travel on approximately 3000 mile road systems located on the TECOM installations. This account also funds the contracts for custodial and refuse collections and civilian firefighters responsible for the safety and health of the workforce that support the varied Army missions located on these installations.</p>											
<p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> • 36179 Funded operations of utilities and other engineering at Aberdeen Proving Ground, Maryland. • 5596 Funded operations of utilities and other engineering at Dugway Proving Ground, Utah. • 13949 Funded operations of utilities and other engineering at White Sands Missile Range, New Mexico. • 4372 Funded operations of utilities and other engineering at Yuma Proving Ground, Arizona. <p>Total 60096</p>

Mission Description and Budget Item Justification: The Base Operations (BASEOPS) program finances those activities and functions necessary for operating and maintaining U.S. Army RDTE installations, laboratories, test ranges and a significant tenant/satellite population. BASEOPS activities and functions include: (1) operation of post supply functions; (2) direct and general maintenance activities; (3) operation and maintenance of transportation equipment and local transportation; (4) operation of laundry and dry cleaning plants and contractual services where Army-owned plants are not operated; (5) Army food service program; (6) support to military and civilian personnel; (7) operation and administration of unaccompanied personnel housing; (8) command element activities required for commanding all Army units assigned or attached to the installation; (9) automation activities; (10) reserve component support; (11) development and administration of morale, welfare and recreation facilities and activities along with quality of life initiatives for the military and their families; (12) police and security services and counterintelligence; (13) resource management operations; (14) Defense Finance and Accounting Service (DFAS); (15) contracting operations; and (16) records management and publications. This is a labor intensive program, providing salaries and related personnel benefits for authorized civilian personnel and associated administrative support functions outlined above. Funding does not include dollars required for Commercial Activities (CA) study or implementation costs resulting from current CA reviews. Includes effort directed toward support of installations or operations required for general research and development use and therefore is appropriate to Budget Activity 6.

M0ZZ	Base Operations - Army Materiel Command (AMC) Test Ranges	140168	143538	145667	145684	148194	150236	152358	Continuing	Continuing	
<p>A. Mission Description and Justification: Finances installation management for operating and maintaining technical test ranges assigned to the U.S. Army Test and Evaluation Command (TECOM), i.e., Yuma Proving Ground, AZ; Aberdeen Proving Ground, MD; Dugway Proving Ground, UT; and White Sands Missile Range, NM. Provides for the test infrastructure base support along with common service base support to over 100 tenants and satellites served by the four TECOM Major Range & Test Facility Bases (MRTFB). Base Operations infrastructure includes fixed costs for payroll as well as personnel costs associated with downsizing and re-engineering to civilian workforce commensurate with technical testing, diverse Army R&D tenants, and a principal training mission at the Ordnance Center and School. Beginning in FY 98, funding for Youth Activities, Child Development and Army Community Services, audio visual support to USA Ordnance Center & School, and Civilian Illness & Injury Compensation (CIIC) transferred from OMA to RDTE (\$10310K). Funds are required to: maintain minimum operating levels necessary to support the technical test mission at AMC test ranges; prevent facility failures which jeopardize the health, safety and quality of life of the military and civilian personnel that work on these installations; support new missions passed to the four TECOM RDTE installations without resources (i.e., BASOPS for an additional 1.2M square foot from BRAC consolidations and new construction; commercial activity implementation costs; Defense Mega Center fees; DFAS support; restoration of English Village; etc.) and for computer modernization to include Local Area Network Upgrades, Technology Advancements, Equipment Replacement and Productivity Enhancements.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> • 72781 Garrison, Aberdeen Proving Ground Support Activity, MD • 14887 Dugway Proving Ground, UT • 37083 White Sands Missile Range, NM • 15417 Yuma Proving Ground, AZ • Above funding included specific projects below: <ul style="list-style-type: none"> - Civilian Illness and Injury Compensation Costs. - Defense Finance and Accounting Services (previously operated by Army Installations) - Funded Military Police (MP) conversion to civilian police/guards <p>Total 140168</p> <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> • 75393 Garrison, Aberdeen Proving Ground Support Activity, MD • 13705 Dugway Proving Ground, UT

Mission Description and Budget Item Justification: This program funds the Research, Development, Test and Evaluation (RDTE) Army Management Headquarters Activities (AMHA) for the U.S. Army Research Laboratory (ARL), Adelphi, MD. This program provides for (1) the development of policy and guidance, (2) long-range planning, (3) programming and budgeting, (4) management of resources (manpower and dollars), and (5) review and evaluation of program performance. Provides salaries and related personnel benefits for authorized civilian personnel and the associated administrative support (travel, supplies and equipment). Includes research and development effort directed toward support of installations or operations required for general research and development use and therefore is appropriate to Budget Activity 6.

PROJECT

7 - Operational System Development

0102419A Aerostat Joint Program

DE55

COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
DE55 JLENS	25680	33011	103937	129095	123044	0	0	85100	499867

A. Mission Description and Budget Item Justification: The Under Secretary of Defense (Acquisition and Technology) and the Army Acquisition Executive (AAE) directed the establishment of the Joint Land Attack Cruise Missile Defense Elevated Netted Sensor System (JLENS) Project Office (PO), formerly Aerostat, for Land Attack Cruise Missile Defense (LACMD) and directed the funding for FY 96-01. This is a multiservice effort with the Army as the lead service. The JLENS PO is assigned to the AAE with operational control assigned to the U. S. Army Space and Missile Defense Command. The program mission is to maximize the battle space of land, sea and air based missile systems by providing Over-the-Horizon (OTH) surveillance and precision track for broad area defense against land attack cruise missiles. JLENS is a theater based system employing advanced technologies with specific focus on LACMD. JLENS sensors provide the OTH surveillance/precision tracking for the Air Directed Surface to Air Missile (ADSAM) concept. The role of the JLENS is to expand the battlefield Commander's surveillance and engagement capability against cruise missiles and other targets by extending the battle space for systems such as Patriot, Medium Extended Air Defense System (MEADS)/Corps SAM, Aegis and Advanced Medium Range Air-to-Air Missile (AMRAAM). This project supports upgrades to surveillance and tracking systems.

Acquisition Strategy: The JLENS PO executed a successful Concept Studies Phase by soliciting Cruise Missile Defense (CMD) architecture concepts that employ elevated sensors. The JLENS PO through a formal selection process has selected Hughes & Raytheon (H&R), a joint venture of Hughes Aircraft Company and the Raytheon Company (now Raytheon Systems Co), as the prime contractor for the JLENS Demonstration Program. The contract structure requires the contractor to perform risk mitigation on state of the art hardware and conduct system design activities leading to a critical design review (CDR) during segment one of the contract. Upon a successful CDR, segment 2 (Option one) will provide for the development, test, and demonstration of an operational prototype sensor system. Technology developed by DARPA and Other Government Agencies (OGAs) is being leveraged to mitigate technical risk areas. Testbed and modeling/simulation activities support the risk mitigation effort. The operational prototype JLENS system will be fully demonstrated together with Patriot PAC-3 and Standard Missile 2 (SM 2) Cooperative Engagement Capability (CEC) in counter LACM ADSAM live fire engagements. The prototype system is intended to be provided to a Commander-in-Chief (CINC) for contingency missions beginning in FY02.

FY 1997 Accomplishments:

- 8265 Completed Concept Definition; continued modeling and simulation analysis.
- 1012 Conducted Tests and Evaluation (Testbed)
- 3447 Joint Project Office.
- 12956 Continued Risk reduction program, vulnerability, weatherability & survivability, simulation analysis & experiments. Issued prime RFP and conducted Source Selection Evaluation Board.

A. Mission Description and Budget Item Justification: The Advanced Field Artillery Tactical Data System (AFATDS) will broaden and modernize the US Army fire support command, control and communications (C3) system. As a battle management system, AFATDS will provide automated fire support in the Army Battle Command System (ABCS) architecture in support of close, rear and deep operations, fire planning and the coordination and employment of all service/combined fire support assets to complement the commander's scheme of maneuver. AFATDS will accomplish this by providing fully automated support for planning, coordination and control of all fire support assets (mortars, close air support, naval gunfire, attack helicopters, offensive electronic warfare, field artillery cannons, rockets and guided missiles) in the execution of close support, counterfire, interdiction, suppression of enemy air defense and deep operations. AFATDS will automatically implement detailed commander's guidance in the automation of operational planning, movement control, targeting, target value analysis and fire support planning. These projects support development of a replacement system for the Initial Fire Support Automated System (IFSAS) and are appropriately funded in Budget Activity 7.

A. Mission Description and Justification: Project D322 - AFATDS Development: The project is composed of a common suite of hardware Army Tactical Command and Control System (ATCCS) Common Hardware/Software (CHS) employed in varying configurations at different operational facilities (or nodes) and unique system software interconnected by tactical communications in the form of a software-driven, automated network. Both hardware and software will be capable of being tailored to perform the fire support command, control and coordination requirements at any level of command. This will permit variable command and control relationships and full fire support functionality at all echelons of field artillery and maneuver, from corps to battery or company in support of all levels of conflict. The Marine Corps will also utilize AFATDS. AFATDS will interoperate with Navy and Air Force Command and Control weapon systems as well as the German fire support system (ADLER), the French fire support system (ATLAS) and British fire support system (BATES).

Acquisition Strategy: AFATDS software will be developed in incremental releases. AFATDS '96, previously named Version 1, received Materiel Release 13 Dec 96. It automates 51% of the required tasks including fire support planning, target nomination, order of fire, and meteorological/survey operations. AFATDS Releases '97, '98 and '99, previously identified as Version 2, will add additional functions, providing automated capabilities for the required tasks including fire support sensor planning and additional munitions. Completion of AFATDS '00, previously identified as Version 3, will result in automation of all the required tasks to meet the objective system, including full fire support planning, target acquisition support and field artillery mission support. Additionally, the completed software will utilize the Joint Common Operating Environment (JCOE) and the Army Technical Architecture. AFATDS will also provide prototype software to support the Division XXI and Army Warfighter Experiments through FY03.

FY 1997 Accomplishments:

- 16752 Completed AFATDS '97 and Support Testing
- 800 Prepared for AFATDS '97 Operational Testing
- 11979 Continued AFATDS '98 software development
- 3325 Initiated AFATDS '99 software development
- Total 32856

<p>A. Mission Description and Justification: Project D2ET - Operational Test: The project finances the direct costs of planning and conducting operational testing and evaluation of the Advanced Field Artillery Tactical Data System (AFATDS) by the Operational Test and Evaluation Command (OPTEC). AFATDS is an Acquisition Category (ACAT) I system which passed the Initial Operational Tests and Evaluation (IOTE) in FY 95. Follow on Operational Tests (OTs) are planned for AFATDS software releases in FY 97, FY98, FY99 and FY00. Operational Testing is conducted under conditions, as close as possible, to those encountered in actual combat with typical user troops trained to employ the system. OPTEC provides Army leadership with an independent test and evaluation of effectiveness and suitability of the system.</p> <p>Acquisition Strategy: Not Applicable.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> • 4311 Prepared for and initiated AFATDS '97 Limited User Test • 340 Completed Test Players preparation for AFATDS '97 Limited User Test (LUT) Total 4651 <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> • 714 Complete AFATDS '97 LUT and evaluate test results • 3115 Prepare for AFATDS '98 Operational Test (OT) • 354 Complete OT unit preparation for AFATDS '98 • 108 Small Business Innovative Research/Small Business Technology Transfer Programs(SBIR/STTR) Total 4291 <p>FY 1999 Planned Program:</p> <ul style="list-style-type: none"> • 748 Conduct AFATDS '98 OT and evaluate test results • 2899 Prepare for AFATDS '99 Operational Test • 361 Complete OT unit preparation for AFATDS '99 Total 4008

Mission Description and Budget Item Justification: This Program Element (PE) responds to vehicle deficiencies identified during Desert Storm, continues technical system upgrades, and addresses needed evolutionary enhancements to tracked combat (Abrams, Bradley) and tactical (Recovery Vehicle, Bradley FIST) vehicles. This PE provides combat effectiveness enhancements for the Abrams Tank through a series of product improvements to the current M1A2 production vehicles. Additional improvements allow the M1A2 SEP tank to operate effectively with the M2A3 Bradley. This PE also addresses future product improvements to the M2A3. These projects support development of upgrades to current production vehicles and are appropriate to Budget Activity 7.

<p>A. Mission Description and Justification: The M88A2 Heavy Recovery Vehicle (HRV), also known as the HERCULES, is an armored, full-tracked, diesel-powered recovery vehicle configured with an A-frame boom, three winches, and a spade. The HERCULES has a 1050 HP engine, an improved transmission to handle the additional towing capability, and hydraulic assisted brakes. The boom has a 35 ton lift capacity. The main winch has a constant pull capability of 70 tons. There is an additional 3 ton auxiliary winch which is used to deploy the main winch. The hull is armored for protection against small arms fire, artillery fragments, and anti-personnel mines. The vehicle has a caliber .50 machine gun mounted for self-protection. The M88A2 HRV is capable of performing recovery, evacuation, and limited repair of the main battle tank. The HERCULES migrated from the Engineering, Manufacturing and Development Phase with Low Rate Initial Production (LRIP) to Full Rate Production (FRP), with a Milestone III decision on 21 August 1997.</p> <p>Acquisition Strategy: All development and production contract actions are on a sole source basis to United Defense Limited Partnership.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> • 3157 Traction Evaluation, Design and Test • 13 Program Management <p>Total 3170</p> <p>FY 1998 Planned Program: Project not funded in FY 98</p> <p>FY 1999 Planned Program: Project not funded in FY 99</p> <p>B. BUDGET ACTIVITY		PE NUMBER AND TITLE								PROJECT		
7 - Operational System Development		0203735A Combat Vehicle Improvement Programs								D330		
COST (In Thousands)		FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost		
D330	Abrams Tank Improvement Program	69187	38559	6421	2982	3973	9923	34805	Continuing	Continuing		

A. Mission Description and Justification: This project funds improvements to the Abrams Main Battle Tank (M1 series) which began production in 1979. Its mission is to close with and destroy enemy forces on the integrated battlefield using firepower, maneuver, and shock effect. The current production model, the M1A2, is the Army's first fully digital ground combat system. The first Army unit was equipped with M1A2 tanks in October 1995.

The M1A2 System Enhancement Program (SEP) is the name given to the latest group or "block" of improvements funded under this project. SEP is an upgrade to the computer core that is the essence of the M1A2. It provides better microprocessors, color flat panel displays, more memory capacity, better Soldier-Machine Interface (SMI), and a new open operating system. An Under Armor Auxiliary Power Unit (UAAPU) is being developed for production in order to mitigate power demands on the batteries so that all systems may operate without turning on the main engine. A new thermal management system will dissipate the heat generated by the electronic components. The M1A2's formidable target acquisition capabilities will also be significantly enhanced with the development for production of the 2nd Generation Forward Looking Infra-Red (2nd Gen FLIR) technology. Both the Gunner's Primary Sight (GPS) and the Commander's Independent Thermal Viewer (CITV) will be modified to integrate the improved thermal imaging capabilities of the new FLIR technology.

The first M1A2 SEP tank is scheduled for production at the end of FY1999. The M1A2 SEP tank will be capable of running the Army's Common Operating Environment (ACOE) software for digital communication with the rest of the combined arms team. Its computer systems will also accommodate future growth without significant hardware changes. The Army plans to develop and incorporate a series of target acquisition, fire control, and survivability enhancements which will bridge the gap between the Abrams Main Battle Tank (M1A2 SEP) and the Future Combat System (PE 0603645A, Project DQ19).

Acquisition Strategy: General Dynamics Land Systems Division (GDLS) is the prime contractor for this development program. Texas Instruments, Inc. is the principal contractor developing the FLIR sights, which the Government will provide to General Dynamics. The cost plus fixed fee contract with General Dynamics was awarded on 14 September 1994.

FY 1997 Accomplishments:

- 63595 Continued development, prototype fabrication and completed component testing; Evaluated M1A2 compatibility with ACOE and continued Command and Control (C2) integration efforts
- 1737 Began contractor component testing and system test planning
- 3855 Provided Government Support/GFE

Total 69187

D344	Fire Support Team Vehicle Integration	17442	9614	10974	4106	0	0	0	0	78102	
<p>A. Mission Description and Justification: The Bradley Fire Support (BFIST) vehicle program integrates Mission Equipment Packages (MEP) into a Bradley Fighting Vehicle and supports heavy maneuver force operations. BFIST replaces the aging M981 Fire Support Vehicle in our heavy divisions. BFIST allows fire support operations to be performed on the battlefield in vehicles with the same signature, survivability, and mobility as other Bradley maneuver units. This program supports material development and conversion of selected Bradley A2 Operation Desert Storm (ODS) based upgrades and Bradley A3 vehicles to the BFIST configuration. The A2 ODS based BFIST is designated M7 and the A3 version is A3 BFIST.</p> <p>Acquisition Strategy: The BFIST program is executed in two-phases: Phase I converts Bradley A2 ODS platforms to the M7 BFIST configuration and Phase II converts Bradley A3 platforms to the A3 BFIST configuration. A Phase I Cost Plus Incentive Fixed Fee (CPPIF), Engineering and Manufacturing Development (EMD) contract through full and open competition requires design and fabrication of four (4) BFIST prototypes for pre-production/user testing. Sole Source/Firm Fixed Price (SS/FFP) Low Rate Initial Production (LRIP) and Full Rate Production contracts with options followed a successful milestone decision. Follow-on Phase II focuses on the A3 BFIST. Full Rate Production contracts will be awarded for development and production of the Bradley BFIST.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> • 11609 Phase I Design Engineering • 1180 Phase I Prototype Manufacturing • 1500 Phase II Design Engineering • 3153 Program Management Total 17442 <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> • 3050 Phase I Design Engineering • 1400 Phase I Prototype Manufacturing • 1118 Phase II Design Engineering • 1067 Program Management • 2138 3 LRIP IOTE/Test Vehicles • 600 P3I • 241 Small Business Innovative Research / Small Business Technology Transfer Programs Total 9614

<p>A. Mission Description and Budget Item Justification: The Air Defense Alerting Device (ADAD) is an improved target acquisition sensor suite that will fully exploit the capabilities of the improved Stinger Block II Seekers on the Bradley Linebacker. The Bradley Linebacker provides air defense coverage for mechanized forces against airborne threats, such as: fixed and rotary wing aircraft, cruise missiles and UAVs. Target acquisition sensors and signal processing techniques are necessary to recognize and identify the threat targets that will support maximum range engagements and still avoid fratricide. Funding will be used by the Stinger Product Manager's Office to determine requirements for this improved sensor suite and to evaluate alternative seeker sensors using range testing.</p> <p>Acquisition Strategy: The Air Defense Alerting Device acquisition approach will consist of four phases: Phase I involves Preliminary Studies and Analysis, Phase II involves Technology Demonstrations, Phase III involves Modeling and Simulation Feedback and Phase IV involves Assessing the Results and Determining viability of Follow-on Actions.</p> <p>FY 1997 Accomplishments: Program not funded in FY 1997.</p> <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> • 3579 Preliminary Studies and Analysis • 200 Project Management • 98 Small Business Innovative Research/Small Business Technology Transfer Programs Total 3877 <p>FY 1999 Planned Program: Program not funded in FY 1999.</p> <p>B. D371	Bradley Base Sustainment Program	85435	69287	67989	2312	0	0	0	0	480380	
<p>A. Mission Description and Justification: The Bradley A3 program upgrades a proven, tracked combat vehicle with digital command and control, increased situational awareness, enhanced lethality and survivability, and supportability/sustainability improvements. This project funds engineering and manufacturing development (EMD) of the Bradley A3. The effort develops and fully integrates digital electronics featuring a 1553 databus core electronic architecture and upgraded vehicle system software packages (command and control, navigation, communications, fire control, system/component diagnostics, and embedded training capabilities), 2nd Gen FLIR, and other systems/components into renovated (overhauled) Bradley A2s. Current plans call for conversion of 1602 Bradley A2s to the Bradley A3 configuration.</p> <p>Acquisition Strategy: Milestone II/IV for the Bradley A3 was held in FY94 and the program was approved for EMD. United Defense was subsequently awarded a Cost Plus Incentive Fee (CPIF) contract for development and integration of advanced A3 systems and components. Ten principal subcontractors, comprising approximately 33% of the contract cost, are participating in the EMD work effort. The first of eight prototypes was completed in 4QFY96; six prototypes are currently undergoing contractor and government production qualification testing. Low Rate Initial Production (LRIP) procurements were awarded in FY 1997 and FY 1998. Limited User Testing and Live Fire Testing will be conducted in FY 1998 and FY 1999, respectively.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> • 70333 Continued Design Engineering Effort • 6500 Continued Prototype Manufacturing • 3305 Began Prototype Qualification Testing (PQT) and Contractor Test Support • 5297 Project Management Total 85435 <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> • 61171 Continue Design Engineering Effort • 1400 Continue Prototype Manufacturing Effort • 2344 Continue Prototype Qualification Testing; Begin Production Verification Testing (PVT) and Live Fire Testing • 2635 Project Management • 1737 Small Business Innovative Research/Small Business Technology Transfer Programs Total 69287

A. Mission Description and Budget Item Justification: The Suite of Survivability Enhancement Systems (SSES) is an effort to develop, produce and apply Defensive Aids Suites (DAS) to all Army ground combat vehicles. A DAS inhibits successful engagement of the host vehicle by providing advance warning of attack and activating countermeasures which obscure the protected platform and jam, decoy or deflect the enemy munitions. Advance warning enables the crew to take defensive action such as maneuvering or returning fire on the enemy. SSES leverages hit avoidance technology developed for aviation electronic warfare (EW) systems, incorporates changes to meet ground requirements, and returns technical improvements to the aviation EW community. It also incorporates ground vehicle specific hit avoidance technology being developed within the technology base. The first phase of this program, the development and fielding of Laser Warning Receivers (LWR) and the Commander's Decision Aid (CDA), is funded for application to the A3 Bradley Fighting Vehicle. The LWR will provide warning of laser assisted engagement of the host vehicle (e.g., laser range finding, laser designation for artillery attack or laser beamrider missile guidance). The LWR program leverages the existing AN/AVR-2A aviation LWR program. The CDA will integrate current and future sensors and countermeasures into the host vehicle's electronic architecture and will provide sensor fusion, threat prioritization and manual, semi-automatic or automatic activation of countermeasures. The CDA leverages work accomplished under the Hit Avoidance Advanced Technology Demonstration.

The Field Emissive Display (FED) program, also known as the High Performance Flat Panel Display (FPD) technology development program, is an effort to develop common, multi-purpose displays for Army ground combat vehicles. This includes the capability for real time interpretation and application of command and control, target imagery and situation awareness information. The FPD will also provide common, multi-purpose, high performance (low power, color, and sunlight readable, high-resolution) system displays. The application of the FPD supports the Force XXI Battle Command - Brigade and Below (FBCB2) operational requirement for the display of common imagery and data in removable and remote operations. In doing so, this program focuses on the near to mid-term opportunity to improve the performance of system displays for combat and combat support vehicles, both tracked and wheeled. The high performance FPD program takes advantage of advanced display technologies under development by the Defense Advanced Research Projects Agency (DARPA) by incorporating changes to meet the requirements of ground systems. System display performance specifications will optimize industry standard interfaces allowing incremental and inexpensive upgrades for future information display requirements. This program has been funded through congressional plus-ups, with \$7.0M provided in FY 1997 and \$12.0M in FY 1998.

As additional HTI projects are identified with funding, these projects will be added to and funded under project D718.

Acquisition Strategy: With regard to LWR effort, we will use existing contracts for RDTE. Full and Open Competition for Production with first year's purchase made using existing production contracts will mitigate risk of late delivery to vehicle production line (and avoid the attendant retrofit costs) and enable the return of technology improvement to aviation electronic warfare system.

7 - Operational System Development

0203740A Maneuver Control System

COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
Total Program Element (PE) Cost	27166	24510	28923	17976	10366	3747	3882	846	437309
D2HT MCS Operational Test	3673	0	0	0	0	0	0	0	8740
D484 Maneuver Control System	23493	24510	28923	17976	10366	3747	3882	846	428569

Mission Description and Budget Item Justification: This program element funds the evolutionary software development, integration and testing of the Maneuver Control System (MCS). Project D2HT, MCS Operational Test, supported the Limited Users Test (LUT) of MCS. Project D484, Maneuver Control System (MCS), automates command and control (C2) functions previously performed manually. It provides secure, automated assistance to the Operations Staff (G3/S3) and other key staff to meet the information needs of commanders for quicker decisions and application of battlefield resources. MCS provides standardized message sets, acquires commander's critical information requirements, and displays status screens and battlefield graphics. These projects involve the development, enhancement, and integration of software functionality that currently exists within the Army's inventory or is currently under development and are therefore appropriately included in Budget Activity 7.

<p>A. Mission Description and Justification: Project D2HT - MCS Operational Test: The project finances the direct costs of planning and conducting operational testing and evaluation of the Maneuver Control System (MCS) by the Operational Test and Evaluation Command (OPTEC). MCS is an Acquisition Category (ACAT) ID system. Operational Testing and Evaluation was conducted in FY 97 via a Limited Users Test (LUT). Operational testing is conducted under conditions, as close as possible, to those encountered in actual combat with typical user troops trained to employ the system. OPTEC provides Army leadership with an independent test and evaluation of effectiveness and suitability of the system.</p> <p>Acquisition Strategy: Not Applicable</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> 3291 Conducted MCS V12 Limited User's Test (LUT) 382 Evaluation of MCS V12 <p>Total 3673</p> <p>FY 1998 Planned Program: Project not funded in FY 1998</p> <p>FY 1999 Planned Program: Project not funded in FY 1999</p> <p>B. BUDGET ACTIVITY		PE NUMBER AND TITLE								PROJECT	
7 - Operational System Development		0203740A Maneuver Control System								D484	
COST (In Thousands)		FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost	
D484	Maneuver Control System	23493	24510	28923	17976	10366	3747	3882	846	428569	

A. Mission Description and Justification: Project D484 - Maneuver Control System (MCS): The project satisfies an urgent need for efficient command and control of tactical operations on the battlefield. MCS is the Army's tactical C2 system used in command posts from Corps to Battalion to provide automated C2 for the commander and staff at and between echelons (i.e., Force Level Control). MCS is the heart of the Army Battle Command System (ABCS) and provides critical coordination among Battlefield Functional Areas (BFAs) within each echelon. The primary component of controlling Force Level Information transactions is MCS's management of common picture information. This includes information across all Battlefield Operating Systems (BOSs) consisting of the Situation Map (SITMAP) using Defense Mapping Agency map data to display friendly and enemy unit locations, control measures (e.g., boundaries, phase lines, etc.), Intelligence and Electronic Warfare graphics, Fire Support plans, combat service support location information, air corridors and air defense weapons control information.

MCS software is based on the Common Operating Environment (COE) standard architecture with applications to automate C2 operations. MCS uses the Terrain Evaluation Module (TEM) for terrain analysis, planning and SITMAP graphical displays. The Unit Task Organization (UTO) Tool provides the commander and staff a means of organizing (graphically and textually) tactical Army units by echelon. Unit commanders and their staffs can quickly and efficiently prepare and disseminate combat orders with MCS's automated OPORD generating tool. MCS's report displays provide resource information roll-ups on all reporting battlefield units. In addition to serving as the common picture database for all ATCCS BFAs, MCS is the gateway for Situational Awareness information received from appliqué. MCS provides the Army "ground track" segment of the joint tactical common picture to the Army Global Command and Control System (AGCCS).

Acquisition Strategy: Since the initial MCS was introduced in Europe in 1981, this program has been and will continue to be, evolutionary software development, broken out into Blocks. The MCS capability continues to expand in pre-planned, time-phased steps toward the objective system. The final block of MCS software, Block IV, consists of development of Versions 12.1, 12.2 and Version 12.3, which will become the objective system. Versions 12.2 and 12.3 add applications and stand-alone functionality from V12.1. Therefore technical risk associated with each version is minimized. The use of a non-development item (NDI) tactical computer processor enables the MCS to capitalize on state of the art ruggedized, commercial equipment and reduce life cycle costs. Commencement of the transition to common hardware/software (CHS) began in FY 1989 with the initiation of the porting of software as well as the initiation of the integration of CHS into both the Standardized Integrated Command Post System (SICPS) and the existing Command and Control Unit vehicle.

FY 1997 Accomplishments:

- 21512 Continued MCS V12 development and integration efforts
- 175 Supported LUT activities
- 1806 Horizontal Battlefield Digitization
- Total 23493

<p>A. Mission Description and Budget Item Justification: The engine upgrade program will convert the T55-L-712 engine to T55-GA-714A configuration, increasing power to allow the aircraft to carry its primary payloads under high altitude/temperatures. The CH-47D, as configured, does not meet its existing 1975 Required Operational Capability (ROC). The addition of numerous engineering changes to provide safety, the latest in operational technology, and improved communications has increased the empty weight of the aircraft. Upgrade of the T55-L-712 engine to T55-GA-714A configuration will provide the capability to meet the required operational capability.</p> <p>Acquisition Strategy: Sole source contract for engineering changes and Low rate initial production contracts awarded.</p> <p>FY 1997 Accomplishments;</p> <ul style="list-style-type: none"> • 4457 Initiate Engineering Changes • 24 Initiate Government In-house Support of the Engine Upgrade Effort <p>Total 4481</p> <p>FY 1998 Planned Program: Project not funded in FY98.</p> <p>FY 1999 Planned Program: Project not funded in FY99.</p> <p>B. A. Mission Description and Justification: The Improved Cargo Helicopter (ICH) is a program to extend useful life of the CH-47D cargo helicopter. This funding will assure heavy lift capability into the 21st century. This program will award a contract for Engineering Manufacturing Development (EMD) which includes decreasing operation and support costs through vibration reduction/airframe stiffening, incorporating a new electronics/architecture system for compatibility with the digital battlefield and structural modifications as necessary to extend the life of the airframe. This program will be the basis for establishing remanufacture, modernization, and upgrade program to meet the readiness needs of the future for heavy lift capability.

Acquisition Strategy: Sole source development contract in Engineering Manufacturing Development (EMD) stage leading to production contract in FY 00.

FY 1997 Accomplishments:

- 880 Initiate Technical assessment Electronic-Architecture Assessment in advance of Risk Reduction Contracts
- 500 Initiate Airworthiness Design Specification Study
- 2324 Initiate Flight Test II operational field trials
- 1600 Initiate Request for Proposal (RFP) Board
- 3819 Continue In-house and program management administration
- 7993 Initiate Program Definition Risk Reduction for the Airframe and the Electronic Architecture
- Total 17116

FY 1998 Planned Program:

- 16884 Initiate Engineering Manufacture Development (EMD)
- 2458 Continue In-house and program management administration
- 1684 Continue Government Test and Evaluation
- 541 Small Business Innovative Research and Small Business Technology Transfer
- Total 21567

D106 Aircraft Engine Component Improvement Program (CIP)	3734	2849	2948	3026	3098	3317	3416	Continuing	Continuing
<p>A. Mission Description and Budget Item Justification: Aircraft Engine Component Improvement Program (CIP) develops, tests, and qualifies improvements to aircraft engine components to correct service revealed deficiencies, improve flight safety, enhance readiness and reduce operating and support (O&S) costs. In addition, CIP provides the test vehicles for the testing and qualification efforts required as a part of the Army's Flight Safety Parts program. CIP is included in the RDTE budget vice procurement appropriations in accordance with congressional direction. The tasks in this project support development of upgrades to current production vehicles and are appropriately funded in Budget Activity 7.</p> <p>Acquisition Strategy: Improved designs will be implemented via Engineering Change Proposal (ECP) and follow-on procurement or modification to a production contract to introduce the improved hardware.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> 1400 T700 Engine: Completed analysis for the update of life limits on the T700-701 engine components utilizing improved analytical and modeling techniques. Design and qualification testing of a WGC HMU T2 Sensor Coating that will prevent related engine stalls. Initiated program with the Navy to provide engine monitoring equipment for Black Hawk to gather field data used to define mission profiles used in life analysis calculations. Redesign HI-Temp connector for the Speed and Torque sensor for maintainability problems. Developed engine running water wash system to reduce downtime in combat. Initiated Electrical Cable EMI shielding improvements for engine wiring harnesses based on recent test results to improve reliability/enhance safety. Design and test an Improved "A" Sump Pressure System to preclude oil leaks to extend service life/reduce O&S cost. 1000 T55 Engine: Continued to develop bearing improvements to improve reliability and fatigue life/ reduce cost. Completed machined combustor liner program to improve durability and survivability and reduce O&S costs. Completed pinned first turbine blade program to prevent catastrophic engine failure from blades shifting forward. Continued to design improved compressor impeller to improve efficiency/extend service life and reduce cost. 942 LOLA Engine Fuel Pump: Completed design of a Liquid Or Light-ends/Air (LOLA) engine fuel pump for UH-60 Black Hawk and Apache to prevent uncommanded engine shutdowns in flight/ restore design flight safety and eliminate operational restrictions. 300 GTCP 36 APU: Developed multiple element thermocouple for Black Hawk to improve accuracy and reduce premature APU removals/reduce O&S cost. Designed and tested improved Apache fuel line connection to eliminate leaks/restore design safety. Test and qualify the Longbow shaft torque limiting valve for use on Apache to reduce gearbox over-torques, improve readiness/reduce O&S cost. Develop & qualify a mainshaft bearing retention device to prevent race spinning and wear to preclude premature APU removal/reduce O&S cost. 92 In-house cost. Total 3734

7 - Operational System Development	0203752A Aircraft Engine Component Improvement Program	February 1998	D106
<p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> 1400 T700 Engine: Perform T700-700 and 701C turbine disc heat transfer and stress analysis to update life limits/preclude catastrophic failures. Install field performance monitors in select Black Hawks to collect field engine performance data needed to validate life calculations. Bench test improved Electrical Cable shielding to resolve known EMI deficiency; improve reliability/enhance safety. Complete design and test an Improved "A" Sump Pressure System to preclude chronic oil leaks/extend service life. Engine test at CCAD HI-Temp connector. 1000 LOLA Engine Fuel Pump: Complete design assurance testing, qualification testing, engine testing and flight testing as a part of a two year project funded in FY97 (directed effort). The LOLA pump will prevent uncommanded engine shutdowns in flight/ restore design flight safety and eliminate operational restrictions. 300 T55 Engine: Continue redesign of bearings to reduce cost and improve reliability and fatigue life. Begin redesign of exterior plumbing to meet current flight safety standards for fireproofing of oil and fuel lines. Design electronic N2 speed sensor to replace the current mechanical system resulting in improved reliability/reduced O&S cost. Redesign T55 tailpipe to improve reliability and reduce performance losses/improve readiness & reduce cost. 79 GTCP 36 APU: Perform 200 hour engine test to qualify improved hardware developed in previous CIP efforts. Complete testing of shaft torque limiting valve for application to the Apache to reduce gearbox over-torques, improve readiness/reduce O&S cost. Evaluate potential for commonality of parts between Black Hawk, Apache and Air Force APUs to reduce O&S cost. 70 IN-HOUSE: In house support for the component improvement program engineers. Small Business Innovative Research/ Small Business Technology Transfer Programs Total 2849 <p>FY 1999 Planned Program:</p> <ul style="list-style-type: none"> 1568 T700 Engine: Continue fracture mechanics and stress analysis on T700-700 and -701C turbine rotors to update life limits/preclude catastrophic failures. Continue data gathering & analysis from Black Hawk mission recorders to permit accurate life limits updates. Qualify and flight test electrical cables with improved shielding to resolve known EMI deficiency; improve reliability/enhance safety. 1000 T55 Engine: Complete qualification testing of bearings to reduce cost and improve reliability and fatigue life. Continue plumbing redesign program to meet current fireproofing flight safety standards for oil and fuel lines. Continue electronic N2 speed sensor design program to improve reliability/reduce O&S cost. Continue tailpipe redesign program improve readiness & reduce cost. 300 GTCP 36 APU: Tear-down and analyze high-time Black Hawk and Apache APUs to determine incipient failures/ identify need for redesign to extend service life and reduce O&S cost. Develop an erosion resistant turbine wheel for Black Hawk APU to extend service life/ reduce O&S cost. 80 In-House Total 2948

RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)										DATE		February 1998	
BUDGET ACTIVITY		PE NUMBER AND TITLE								PROJECT			
7 - Operational System Development		0203758A Digitization								D374			
COST (In Thousands)		FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost			
D374	Horizontal Battlefield Digitization	98124	94103	45007	29445	28248	16337	15368	Continuing	Continuing			
<p>A. Mission Description and Budget Item Justification: This program provides the interoperability of combat, combat support, and combat service support platforms (i.e., tanks, fighting vehicles, aircraft, command/control and logistics/resupply) and battlefield automated systems (i.e., Maneuver Control System (MCS)/Phoenix, Force XXI Battle Command, Brigade and Below (FBCB2), Advanced Field Artillery Tactical Data System (AFATDS), Forward Area Air Defense Command, Control and Intelligence (FAADC2I), All Source Analysis System (ASAS), Combat Service Support Control System (CSSCS)) with common technology through new acquisitions, Pre-Planned Product Improvements (P3I), and system-component upgrades. The application of common technologies across multiple systems through an integrated and seamless battlefield architecture improves the capabilities of battlefield systems that fight together as units or integrated task forces, providing a significant and potentially decisive warfighting improvement to the force. Battlefield digitization allows the Army's primary weapons and battle command systems to see, acquire and engage threats while sharing the same information with equal clarity, using advanced technologies and digital communications. To prove out concepts and requirements, near term efforts were focused on developing a seamless battlefield architecture and digitized appliqué systems to support experimentation with brigade-sided maneuver task force in FY 1997 and a division level experiment in FY 1998. This program supports the horizontal battlefield systems program integration office (Army Digitization Office), responsible for the overall horizontal integration of digitization capabilities throughout the Army. Supports engineering and integration of FBCB2 capability for the Abrams tank using government furnished equipment (GFE) FBCB2 hardware/software and provides the M1A1 with basic situational awareness and Command and Control via FBCB2. Supports engineering and integration of FBCB2 into the Bradley Fighting Vehicle Legacy Fleet and a "go-to-war" FBCB2 capability to the M2/M3 A2 ODS (which were changes made to the basic vehicle as a result of lessons learned from Operation Desert Storm). Also, provides comprehensive modeling and simulation efforts, thorough requirements analysis to combine AWE, operational architecture, interoperability exchange requirements with technical overheads to obtain realistic data traffic flows and mission thread analysis; and the system engineering required to ensure First Digitized Division command and control systems are fully interoperable. This program element is appropriately placed in Budget Activity 7 since it supports experimentation, system integration, interoperability and modification of equipment in the Army inventory.</p> <p>Acquisition Strategy: Starting in FY 99, FBCB2 was transferred to a new program element 0203759A entitled "Force XXI Battle Command, Brigade and Below." Digitization resources the systems engineering, testing, and integration of digital capability across multiple command and control, communications, sensor and weapons platforms. The result will be an integrated digital capability to multiple battlefield operating systems, with initial emphasis on meeting the near-term requirements for the first digitized division. Also, supports Army's part of joint and multinational digitization programs; coordinates/manages security, vulnerability and "Red Teaming" functions; and manages MANPRINT, modeling and simulations, analysis and supports Advanced Warfighting Experiments (AWEs).</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> • 16578 Continued development of appliques and their platform integration. • 31470 Continued development of command and control software for brigade and below. • 25948 Conducted simulation, experimentation and evaluation of prototype hardware and software.

RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)		DATE	February 1998
BUDGET ACTIVITY	PE NUMBER AND TITLE	PROJECT	
7 - Operational System Development	0203758A Digitization	D374	
FY 1997 Accomplishments: (continued)			
• 4662	Completed development of data distribution system.		
• 7166	Interoperability: Continued development of protocols and standards, M1A2/appliqué digital connectivity, and Battlefield Interoperability Program.		
• 4300	Initiated modification to existing FBCB2 hardware and development of new integrated appliqué software for M1A1 and M2A2.		
• 8000	Initiated rapid acquisition of software enhancements for the Tactical Internet.		
Total	98124		
FY 1998 Planned Program:			
• 1500	Equip and train IBN test unit and conduct LUT.		
• 15000	Hardware to support IOTE testing.		
• 15322	Continue development and upgrades to Brigade and Below Command and Control Software.		
• 13641	Continue test, simulation, experimentation and evaluation of prototype hardware and software.		
• 13034	System Engineering/Development/Platform Integration.		
• 10311	Interoperability: Abrams/Bradley/FBCB2 digital connectivity, and Battlefield Interoperability Program.		
• 3432	Complete development of FBCB2 software interface with Abrams and Bradley.		
• 5665	Continue rapid acquisition of software enhancements for the Tactical Internet.		
• 2885	Analysis (including modeling/simulation) to predict overall digitized system of systems performance.		
• 4595	Thorough validation of digital requirements/architecture to ensure realistic/adequate data flows, mission thread analysis, interoperability, human resource engineering, security, and physical layout.		
• 1320	Integration tools, plans, specifications, and other training, logistics, interface, and configuration management products.		
• 5665	Tactical Personal Communications.		
• 1733	Small Business Innovative Research/Small Business Technology Programs.		
Total	94103		
FY 1999 Planned Program:			
• 6388	Test, experimentation and simulation of prototype hardware/software.		
• 4099	System Engineering/Platform Integration		
• 3500	International Command & Control System/ Integration Program/ Battlefield Interoperability Program		
• 4110	Analysis (including modeling/simulation) to predict overall digitized system of systems performance.		
• 6225	Thorough validation of digital requirements/architecture to ensure realistic/adequate data flows, mission thread analysis, interoperability, human resource engineering, security, and physical layout.		
• 1885	Integration tools, plans, specifications, and other training, logistics, interface, and configuration management products.

FY 1999 President's Budget Request		+7940	+22543
		98120	94103
			45007
Change Summary Explanation:			
FY 1997 - Congressional increase for WRAP Initiatives - for FBCB2 Software Interface/Integration with M1A1/M2A2 and for Tactical Internet.			
FY 1998 - Congressional increase for continued WRAP Initiatives - \$2.4M for FBCB2 Software Interface/Integration with M1A1/M2A2 and \$5.7M for Tactical Internet, and \$5.7M for Tactical Personal Communications. Also includes Army's Congressional emergency reprogramming for Digitization - \$16.2M FBCB2 Software development and hardware to support IOTE testing, and \$8.8M for Systems Integration.			
FY 1999 - Transferred \$29.7M from Proj D374 to new FBCB2 Program Element 0203759A, Project D120; transferred \$5.8M to OPA SSN BZ9962 to procure LAN routers to support fielding of digitized division and corps; increased funding \$12.22M for Systems Integration; and increased funding \$18.8M for engineering/procurement of an integrated FBCB2 capability for M1A2 SEP and M1A1 Abrams using GFE FBCB2 software/hardware and "go-to-war" FBCB2 capability to M2A2ODS.

RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)										DATE February 1998	
BUDGET ACTIVITY		PE NUMBER AND TITLE								PROJECT	
7 - Operational System Development		0203759A Force XXI Battle Command, Brigade and Below(FBCB2)								D120	
COST (In Thousands)		FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost	
D120 Force XXI Battle Command, Brigade & Below (FBCB2)		0	0	52469	47000	30000	20000	20000	Continuing	Continuing	
<p>A. Mission Description and Budget Item Justification: The initial FBCB2 effort was developed under Program Element 0203758A Project D374 as part of the Army's digitization initiative and was transferred to this Program Element for central management by PEO C3S/PM Applique beginning in FY-99. The mission of FBCB2 is to field a Digital Battle Command information system that provides mounted tactical combat, combat support, and combat service support commanders, leaders, and soldiers integrated, on-the-move, real-time/near real-time, battle command and information and situation awareness from brigade down to the soldier/platform level across all battlefield functional areas (BFAs). FBCB2 is located in the mounted and dismounted maneuver (divisional, separate, heavy and light) cavalry/reconnaissance and armored cavalry, mechanized infantry and aviation units; FBCB2 integrates ATCCS located within the brigade and battalion. Battlefield digitization allows the Army's primary weapons and battle command systems to see, acquire, and engage threats while sharing the same information with equal clarity, using advanced technologies and digital communications. FBCB2 develops a seamless battlefield architecture and digitized appliqué systems (computer with graphics display, global positioning system, communications link, and command and control software) required to field the First Digitized Division by FY-00 and First Digitized Corps by FY-04/05.</p> <p>Acquisition strategy: The primary goal of the FBCB2 acquisition is to minimize the time, cost, and technology risks of satisfying requirements while providing a capability that is fully integrated with the overall Division's warfighting capabilities. The technical approach involves the incorporation of digital communications, situation awareness and digital message traffic capabilities in a variety of embedded and non-embedded platforms. These platforms are then connected through communications infrastructure provided by the Tactical Internet. Interoperability is provided through the use of graphics, images common messages and data elements. The interfaces between FBCB2 and ATCCS systems will provide users at all levels a common picture of their battlespace. The Program Executive Officer for Command, Control and Communications (PEOC C3S) is responsible for executing the FBCB2, ATCCS, communications infrastructure, and weapons platforms.</p> <p>FY 1997 Accomplishments: Program Funded in Program Element 0203758A Project D374 in FY 1997.</p> <p>FY 1998 Planned Program: Program Funded in Program Element 0203758A Project D374 in FY 1998.</p> <p>FY 1999 Planned Program:</p> <ul style="list-style-type: none"> • 33793 Brigade and Below Command and Control software/hardware development/upgrades. • 5973 Simulation, experimentation and evaluation of prototype software (Version 3.0 & 3.1) • 12703 System Engineering/Test/Integration/Training <p>Total 52469</p>

Mission Description and Budget Item Justification: Force XXI Initiatives (Warfighting Rapid Acquisition Program) continues as one of the Army's successful Acquisition Reform initiatives. The overall intent of the Force XXI Initiatives is to put proven technologies in the hands of the soldiers sooner while gaining significant time and dollar savings. Candidates considered for funding through this program are compelling, mature technologies capable of achieving a milestone III decision immediately or following one to two years of continued development. Initiatives can originate from virtually anywhere. "Good ideas" continue to emerge from such sources as the Training and Doctrine Command (TRADOC) Centers, Schools and Battle Labs, the user community, the Army Materiel Command (AMC), Research Development & Engineering Centers (RDECs), the Project Manager/Program Executive Officer (PM/PEO) community, industry, Academia, Horizontal Technology Integration (HTI), General Officer Steering Committees (GOSCs), and the Federally Funded Research and Development Centers (FFRDCs). The Army's Advanced Warfighting Experiments (AWE) continue to provide the testing ground of choice for many of these emerging technologies, as in the case of Task Force XXI AWE at the National Training Center, Fort Irwin, California for the FY97 WRAP, and Division XXI AWE at Fort Hood, Texas for the FY98 program.

This program element was established in FY97 to serve as a holding account for all funding appropriated by Congress to support this program, consistent with Congressional language reflected in the Department of Defense Appropriations Bill for FY97. As experienced with the FY97 and FY98 WRAP funding, which required a number of internal realignments of funds for WRAP initiatives associated with on-going programs, execution of FY99 WRAP funding will require reprogramming of funds from this line to other program elements or other appropriations, as deemed appropriate under current congressional or legal constraints. This program element supports upgrades to existing systems and is therefore appropriately placed in Budget Activity 7.

Mission Description and Budget Item Justification: The changing global threat and the new Army Warfighting Doctrine developed to respond to this changing threat all significantly impact the mission of Air Defense Artillery (ADA). This doctrine calls for U.S. forces to be able to win two nearly simultaneous major regional conflicts and to conduct combat operations characterized by rapid response and a high probability of success while minimizing the risk of significant American casualties. ADA must continually be upgraded and modernized in accordance with the ADA missions. The FY 99 budget funds critical improvements to PATRIOT and Stinger. This project supports development of upgrades to current equipment and is appropriately funded in Budget Activity 7.

BUDGET ACTIVITY		PE NUMBER AND TITLE								PROJECT	
7 - Operational System Development		0203801A Missile/Air Defense Product Improvement Program								D036	
COST (In Thousands)		FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost	
D036	PATRIOT Product Improvement Program	45087	21698	9285	8873	7791	5099	5122	48800	474954	

A. Mission Description and Justification D036 - PATRIOT Product Improvement Program: The PATRIOT system is being upgraded through a series of individual materiel changes (MC) culminating in the attainment of the PATRIOT Advanced Capability - 3 (PAC-3) system. The communication upgrades improve PATRIOT's above and below battalion communication equipment. These changes eliminate PATRIOT peculiar communications equipment and improve PATRIOT's interoperability between systems and between the services.

Acquisition Strategy: The design objective of the PATRIOT system was to provide a baseline system capable of being modified to cope with the evolving threat. This alternative minimizes technological risks and provides a means of enhancing system capability through planned upgrades of deployed systems. The PATRIOT program consists of two interrelated acquisition programs - The PATRIOT growth program and the PAC-3 missile program. Growth program modifications are grouped into configurations which are scheduled to be fielded in the same time frame. Configuration groupings are a convenience for managing block changes of hardware and software and are not a performance-related grouping. However, incremental increases in performance will be determined for each configuration in order to provide benchmarks for configuration testing and for the development of user doctrine and tactics.

FY 1997 Accomplishments:

- 5341 P3I test program
- 5667 Communications upgrades
- 750 Responsive threat analysis
- 33329 Anti-Cruise Missile upgrade
- Total 45087

FY 1998 Planned Program:

- 5515 P3I test program
- 6198 Communication upgrade
- 9473 Anti-Cruise Missile Upgrade
- 512 Small Business Innovative Research/Small Business Technology Transfer Programs
- Total 21698

A. Mission Description and Budget Item Justification: This project provides a product evolution of the STINGER-RMP to improve countermeasures capability via externally loaded software, which is downloaded from a reprogrammable module. This concept allows for timely upgrades to correct system deficiencies, rapid reaction to new threats or threat countermeasures, development of specialty software programs where full capability may not be desired, and accommodation of new missions. The Block I upgrade project, which adds a roll sensor and enhanced software, extends the missile service life, solves the recognized system-performance deficiencies in countermeasures and other engagement conditions, and increases terminal accuracy. The Block II program is a development of an advanced infrared (IR) Focal Plane Array Seeker which improves the performance of the missile against an expanded target and in background clutter. The program develops the improved missile for adaptation to any or all of the STINGER firing platforms, extends the missile service life and establishes a government post deployment software support posture. The Block II engineering, manufacturing and development (EMD) program provides for development to a performance specification, design qualification of guidance section conducted as part of the production qualification, and platform integration. Funds also develop MIL-STD 1760 launcher electronics to be fielded with the Apache Longbow Helicopter air-to-air requirements, based on Joint Service (U.S. Air Force and U.S. Army) doctrine. The air-to-air requirement satisfies three tasks: self-protection, protect force, and augmentation of air defense forces. Funding also supports an eight nation Memorandum of Understanding (MOU) signed by the Office of Secretary of Defense in 1994 for the conduct of a two-year competitive feasibility study on NATO Very Short Range Air Defense Systems (VSHORADS) and Short Range Air Defense Systems (SHORADS); this will form the basis for the development of a VSHORADS/SHORADS NATO Staff Requirement and information to support the development of a follow-on system to STINGER.

Acquisition Strategy: The Block I development program is a SS/CPPIF contract awarded in 1992. The Block II development began FY 1993 as Technology Base Broad Agency announcement with a SS/CPPIF contract. Current SS/CPPIF contract awarded 1996 for pre-EMD, EMD start FY 2000, MS IIIa FY 2005, and FUE FY 2007. A SS/CPPIF contract for MIL-STD Launcher electronics development was awarded mid-FY 1997. The VSHORADS/SHORADS Competitive/Firm Fixed Price contract was awarded to two international consortia; the United Kingdom was designated as the Pilot Nation, serving as contracting authority.

D785 Longbow HELLFIRE PIP	0	0	0	0	11566	19153	11541	14672	56932

Mission Description and Budget Item Justification: Expanding regional power threats require an evolutionary improvement program to maintain the effectiveness of the HELLFIRE, Army TACMS, TOW and Hydra 70 Systems. The HELLFIRE PIP funding was utilized to conduct component qualification tests (CQT) of the HELLFIRE II insensitive munitions (IM) rocket motor under various environments and for product improvements to the Laser HELLFIRE Missile Systems such as countermeasure improvements to respond to changing threats, air-to-air capability improvements, a multi-mode warhead (shaped charge/blast fragmentation), IFF capability, increased field of view and target acquisition range, and development of mission specific rocket motors such as a short range training motor and an extended range boost sustain rocket motor. The Longbow HELLFIRE PIP consists of the Longbow HELLFIRE Home-on-Jam (HOJ) and Counter-Active Protection System (CAPS) improvements. The Longbow HELLFIRE missile provides a fire-and-forget capability, greatly increasing weapon system effectiveness and aircraft survivability. The weapon system is employable by day or night, in adverse weather, and in countermeasures environment. The HOJ and CAPS objective is to maintain the Longbow missile's low vulnerability and susceptibility to existing and future battlefield jammer threats and "hard kill" Active Protection System (APS) threats. The Army TACMS Block IA development effort integrated Global Positioning System (GPS) technology into the guidance system of the Army TACMS Block I missile to provide more accurate information for orientation of the missile in position and azimuth. The payload quantity of M74 anti-personnel/anti-materiel (APAM) bomblets will be reduced resulting in a range approximately twice that of the current Block I missile. The inherent GPS accuracies will be achievable independent of range, thereby enhancing system performance. These funds also supported participation by Block IA prototype missiles in the Joint Precision Strike Demonstration (JPSD). The Army TACMS IIIB will achieve ranges of approximately one and one-half times that of the Army TACMS Block IA and will employ an earth penetrator warhead designed to neutralize "Hard and Deeply Buried Targets". These target sets might include underground chemical warfare and munitions storage sites, underground command and control facilities, or surface-to-surface missile storage and assembly areas. Project D2MT provided for the operational testing of the Army TACMS Block IA Program. The TOW PIP provides advances in the day/night sight

<p>improvements, fire control and missile improvements. Improvements are required to maintain the infantry's capability to support the US Army mission of crisis response to regionally based threat and allows for TOW to continue to be integral to the strategic principle of forward presence. Included in this PIP are missile improvements to include a lethality effort against new/evolving threats and the Improved Target Acquisition System (ITAS). The ITAS is a technology insertion program using Second Generation Forward Looking Infrared (FLIR) technology to upgrade the current TOW Target Acquisition and Fire Control subsystems. These projects support development of upgrades to current production vehicles and are appropriately funded in this budget activity, 7.</p>

D045	HELLFIRE Product Improvement Program	3717	0	0	0	0	23427	18983	0	505866																																	
<p>A. Mission Description and Budget Item Justification: Project D045- HELLFIRE Product Improvement Program: The Army intends to use funding to conduct component qualification tests (CQT) of the HELLFIRE II insensitive munitions (IM) rocket motor under various environments. The new IM rocket motors will be much less susceptible to catastrophic failure from external stimuli such as bullet impact, fire, fragment impact and sympathetic detonation. CQTs of the IM rocket motors are to demonstrate, meet specifications, safety and IM requirements.</p> <p>Acquisition Strategy: Awarded the HELLFIRE II Insensitive Munitions rocket motor Letter Contract (Cost Plus Fixed Fee) in FY 1997.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> • 3400 IM rocket motor contract • 317 In-house support Total 3717 <p>FY 1998 Planned Program: Project not funded in FY 1998</p> <p>FY 1999 Planned Program: Project not funded in FY 1999</p> <p>B. <p>A. Mission Description and Budget Item Justification: Project D2MT- ATACMS BLOCK IA Operational Tests: This project finances the direct costs of planning and conducting operational testing and evaluation of the Army Tactical Missile System Block IA system by the Operational Test and Evaluation Command (OPTEC). The Army TACMS is an Acquisition Category (ACAT) I system with a dedicated Initial Operational Test and Evaluation (IOTE) started in FY 96 in support of Milestone III full production decisions. Operational Testing is conducted under conditions similar to those encountered in actual combat with typical user troops trained to employ the system. OPTEC provides the Army leadership with independent test and evaluation of system effectiveness and suitability.</p> <p><u>Acquisition Strategy:</u> Not applicable.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> • 212 Army TACMS Block IA operational testing. <p>Total 212</p> <p>FY 1998 Planned Program: Project not funded in FY 1998</p> <p>FY 1999 Planned Program: Project not funded in FY 1999</p> <p>B. COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
D304 Army TACMS BLK IA	8965	0	0	0	0	0	0	0	92699

A. Mission Description and Budget Item Justification: Project D304 - ARMY TACMS BLOCK IA: The Army TACMS Block IA development effort integrates Global Positioning System (GPS) technology into the guidance system of the Army TACMS Block I missile to provide more accurate information for orientation of the missile in position and azimuth. The payload quantity of M74 anti-personnel/anti-materiel (APAM) bomblets will be reduced resulting in a range approximately twice that of the current Block I missile. The inherent GPS accuracies will be achievable independent of range, thereby enhancing system performance. Funds also supported participation by Block IA prototype missiles in the Joint Precision Strike Demonstration (JPSD). The Block IA Engineering and Manufacturing Development (EMD) program incorporates the improved guidance capability. The improved missile will destroy high value targets.

Acquisition Strategy: The Army TACMS Block IA program develops an extended range version of the currently fielded Army TACMS Block I missile. This is achieved by reducing the bomblet payload and adding the Global Positioning System into the guidance to maintain system accuracy. A sole source EMD contract was awarded to Loral (now Lockheed Martin Vought). Low Rate Initial Production (LRIP) began in FY 1996.

FY 1997 Accomplishments:

- 2865 Block IA EMD (fourth increment).
- 5600 Testing activities, data analysis and reporting (3200 reprogrammed from missile procurement to support testing for survivability & effectiveness).
- 500 Studies, development, and validation of future improvement programs.
- Total 8965

FY 1998 Planned Program: Project not funded in FY 1998

FY 1999 Planned Program: Project not funded in FY 1999

Change Summary Explanation:

Funding: FY 1997 funding increased by Congressional reprogramming (+3200) and other below threshold reprogrammings (+1389).
 Schedule: Reference decision by Army Acquisition Executive 22 Apr 97; the Milestone III Decision in 2QFY98 will be contingent upon the Block IA missile satisfying the exit criteria approved at the Milestone IV ASARC in February 1994.

COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
D336 TOW Product Improvement Program	676	1216	1248	0	0	0	0	0	348479

A. Mission Description and Budget Item Justification: Project D336 -TOW Product Improvement Program: Provides for continued development of improvements to the TOW missile system. Improvements are required to maintain the Infantry's capability to support the US Army mission of crisis response to regionally based threats and allow TOW to continue to be integral to the strategic principle of forward presence. Included in this PIP are missile improvements (seeker, lethality, aerodynamics, guidance, control, reduced missile time of flight), and Improved Target Acquisition System (ITAS). The ITAS increases the capability of the TOW Heavy Antitank Weapon System by providing improved target detection and acquisition range, improved probability of hit, enhanced fire control capabilities and improved logistics supportability through modular design and extensive built-in test/built-in test equipment. ITAS contains the Army's pathfinder common components for its Second Generation FLIR, sustains concurrent common components production with Improved Bradley Acquisition System (IBAS) and is a baseline platform for the Follow-on to TOW (FOTT). The ITAS design provides simple growth potential for digitization applications and upgrades the anti-armor capability of light forces using the TOW System.

Acquisition Strategy: The ITAS is a technology insertion program utilizing Second Generation FLIR technology to upgrade the current TOW Target Acquisition and Fire Control subsystems. The 2nd Low Rate Initial Production (LRIP) contract will be awarded sole source to the EMD contractor in FY 98. First Full Rate Production (FRP) contract will be awarded in FY 99.

FY 1997 Accomplishments:

- 121 Completed ITAS Perf Spec/Develop ITAS Indoor Trainer
- 555 Continued missile enhancement efforts against the evolving threat [to include Counter Active Protection System (CAPS)]
 - Developed analytical/simulation model
 - Designed long stand-off warhead
 - Designed electrical active/passive measures
 - Designed/developed adaptive warheads for target variety

Total 676

FY 1998 Planned Program:

- 752 Continue EMD efforts on ITAS Indoor Trainer
- 443 Continue missile enhancement efforts against the evolving threat [to include Counter Active Protection System (CAPS)]
 - Update analytical/simulation model based on latest intelligence reports
 - Design/test long stand-off warhead

A. Mission Description and Budget Item Justification: A requirement exists to automate Signal Corps unit's capability to manage multiple tactical communications systems in support of battlefield operations. The Integrated System Control (ISYSCON) facility will provide automated, integrated management of the tactical communications network, establish an interface with each technical control facility in the Army Tactical Command and Control System (ATCCS) architecture, and enable automation assisted configuration and management of a dynamic battlefield. ISYSCON is being developed in an evolutionary manner with incremental software releases. A change to the requirements document has added planning and management of satellite resources as a requirement. The ISYSCON has been selected as the baseline for network management system for joint task force use. The Battlefield Spectrum Management (BSM) software has been designated as part of the migration system for DOD use. The ISYSCON Program serves as a baseline foundation to support future network management initiatives tied to and part of the evolution to the Digitized Division and the WIN Architecture. ISYSCON is also being extended to manage the Tactical Internet at brigade and battalion levels. FY 1999 supports the development of software (P1, P2, P3), supports IOT&E, and supports releases. This program element also supports any development required for PM, Joint Tactical Area Communications System (JTACS) Area Common User Systems (ACUS). This program is assigned to Budget Activity 7 since it includes those development projects, in support of a development, acquisition program or upgrades, still in engineering and manufacturing development but which have received approval for production through DAB or other action, or production funds have been included in the DOD budget submission for the budget or subsequent fiscal year.

Acquisition Strategy: A competitive Engineering & Manufacturing Development (EMD) contract was awarded to GTE in Sep 92. An IOT&E is scheduled for 2QFY98.

FY 1997 Accomplishments:

- 5197 Participated in the Army Warfighter Experiment (AWE) Exercise
- 1500 Participated in Division AWE Ramp Up
- 2000 Supported 3rd Sig Brigade Field Exercises in preparation for Initial Operational Test & Evaluation (IOT&E)
- 1500 Completed Battlefield Spectrum Mgmt (BSM) Module for integration into IOT&E Baseline
- 550 Conducted Developmental Progress Review (DPR) for IOT&E Baseline
- 3000 Completed Systems Design for IOT&E Software Baseline
- 4000 Conducted Software Coding for IOT&E Baseline
- Total 17747

COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
M635 Joint Tactical Ground Station P31 (TIARA)	2022	5001	12229	29034	6551	5468	3232	0	63537

A. Mission Description and Budget Item Justification: This program supports development of critical improvements to the Joint Tactical Ground Station (JTGS) program. JTGS was designed as a quick response non-developmental item (NDI) acquisition to satisfy critical in-theater deficiencies in Tactical Ballistic Missile (TBM) warning and cueing. JTGS is designated the in-theater element of the United States Space Command's (USSPACECOM) Theater Event System (TES). The objectives of the JTGS critical improvements program are to keep pace with modernization of the Department of Defense (DoD) Defense Support Program (DSP) satellites into the evolving Space Based Infrared System (SBIRS), to retain timely dissemination of TBM launch data through sensor technology advances and to increase the accuracy and timeliness of TBM warning and cueing. This project supports development of upgrades to current production modifications and is appropriately funded in Budget Activity 7.

Acquisition Strategy: Critical JTGS improvements under this program will be developed making maximum use of NDI/Commercial Off-The Shelf (COTS) elements. After selection and assembly, the modification design will be subjected to thorough integration and performance testing to ensure suitability for procurement. Once approved for procurement, an upgrade package will be procured for each of the 5 tactical units. Application of the upgrades will be accomplished at each of the JTGS operational sites.

FY 1997 Accomplishments:

- 294 Initiated modification to integrate the JTIDS commo net into JTGS.
- 795 Initiated modification to fuse DSP sensor data with data from other battlefield sensors.
- 933 Initiated modification to calibrate sensor via static sources or beacons.
- Total 2022

FY 1998 Planned Program:

- 782 Complete fusion development.
- 633 Complete beacon development.
- 1461 Continue JTIDS development.
- 2000 Initiate modification for the Phase II (SBIRS) development.
- 125 Small Business Innovation Research/Small Business Technology Transfer Program.
- Total 5001

FY 1999 Planned Program:

- 75 Complete JTIDS development.
- 25 Prepare for JTIDS Decision Review.
- 12129 Continue SBIRS development.
- Total 12229

	COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
Total Program Element (PE) Cost		3048	11771	7433	7433	8174	9060	9332	Continuing	Continuing
D491 Communications Security Equipment Technology (COMSEC)		2474	8432	6264	6217	6980	7889	8188	Continuing	Continuing
D501 Army Key Management System (AKMS)		574	3339	1169	1216	1194	1171	1144	Continuing	Continuing

Mission Description and Budget Item Justification: The Communications Security Equipment Program develops Information Systems Security (ISS) equipment and techniques required to combat threat Signal Intelligence capabilities and to insure the integrity of data network. This program will also develop, integrate, and demonstrate C2 Protect Common Tools into C4I systems that consist of hardware, software, and applications which can manage, protect, detect and react to C2 system vulnerabilities, threats, reconfigurations, and reconstitution. The Army's RDTE ISS program objective is to implement National Security Agency (NSA) developed security technology in Army information systems. The Communications Security Equipment Technology (COMSEC) insures total signals and data security of all Army information systems, to include any operational enhancement and specialized Army configurations. The Army Key Management System (AKMS) automates key generation and distribution while supporting joint interoperability. It provides communications and network planning with key management on a single platform. AKMS is a part of the management/support infrastructure for the Warfighter Information Network (WIN) program. Additional modifications to the AKMS baseline shall be required to support the emerging WIN architecture. System security engineering, integration of available information security (INFOSEC) products, development (when required), and testing are services provided to ensure that C4I systems are protected against malicious or accidental attacks by our enemies or friends. Modeling, simulation, and risk management tools will be used to develop C2 Protect capabilities that will enable the warfighter to distribute complete and unaltered information while maintaining a dynamic, continuous synchronous operational force. Several joint service/NSA working groups exist in the area of key management to avoid duplication and to assure interoperability between all Services' systems to include standards and testing. For the emerging multilevel network security, the Defense Information Systems Agency (DISA) Multi-Level Security (MLS) working group coordinates the Services different technology efforts. The National Security Agency reviews each Service RDT&E program to avoid duplication. These projects support development of upgrades to current production vehicles and are appropriately funded in Budget Activity 7.

Mission Description and Budget Item Justification: Military Satellite Communications (MILSATCOM) systems are joint program/project efforts with each Service, Joint Chiefs of Staff (JCS), National Command Authority, Commanders-In-Chief (CINCs), National Security Agency and Office of the Secretary of Defense assigned specific responsibilities as specified in JCS Memorandum of Policy (MOP) 37. The worldwide MILSATCOM systems are the following: Ultra High Frequency (UHF) Fleet Satellite/Air Force Satellite (FLTSAT/AFSAT) system; the Super High Frequency (SHF) Defense Satellite Communications System (DSCS); the Extremely High Frequency (EHF) MILSTAR system; the UHF Follow-On Satellite system; and all MIL-STD-1582C compatible payloads. MOP 37 designated Army as the Executive Agent for MILSATCOM Ground Subsystems. As Executive Agent for MILSATCOM Ground Subsystems, Army is responsible for developing, procuring, and maintaining the life cycle logistics support for satellite terminals; satellite control subsystems; communications subsystems; and all related equipment required to achieve end-to-end connectivity to satisfy JCS Command, Control, Communications, and Intelligence (C3I) supporting the President; JCS; CINCs; Military Departments; Department of State; and other

D2PT SMART-T Operational Test	134	4318	0	0	0	0	0	0	4452

A. Mission Description and Budget Item Justification: Project D2PT - SMART-T Operational Test: Project D2PT finances the direct costs of planning and conducting operational testing and evaluation of the Secure Mobile Anti-Jam Reliable Tactical Terminal (SMART-T) by the Operational Test and Evaluation Command (OPTEC). SMART-T is an Acquisition Category (ACAT) IC system with an Initial Operational Test and Evaluation (IOTE) in FY 98. Operational testing is conducted under conditions as close as possible to those encountered in actual combat with typical user troops trained to employ the system. OPTEC provides Army leadership with an independent test and evaluation of effectiveness and suitability of the system.

Acquisition Strategy: Not Applicable

FY 1997 Accomplishments:

• 134 Planning and preparation for IOT&E
Total 134

FY 1998 Planned Program:

• 4210 Conducts IOT&E
• 108 Small Business Innovative Research/Small Business Technology Transfer Programs(SBIR/STTR)
Total 4318

FY 1999 Planned Program: Project not funded in FY 1999

<p>A. Mission Description and Budget Item Justification: Project D253 - DSCS-DCS Phase II: This project provides funds required to develop strategic and tactical Ground Subsystem equipment to support JCS validated Command, Control, Communications and Intelligence (C3I) for the worldwide Super High Frequency (SHF) Defense Satellite Communications System (DSCS) program. Continuing upgrades for the DSCS are vital to support the emerging power projection and rapid deployment role of the Armed Forces. DSCS provides warfighters multiple channels of tactical connectivity as well as interface with strategic networks and national decision-makers.</p> <p>Acquisition Strategy: The Universal Modem System (UMS), Replacement Satellite Configuration Control Element (RSCCE), and Replacement Batson (RBATSON), programs will be followed by Competitive Firm Fixed Price Procurement Programs that contain a basic production year followed by one or more option years of production. The DSCS Integrated Management System (DIMS) and Common Network Planning Software (CNPS) programs are software development programs that are not planned to have follow-on production.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> 2560 Completed MDR Technical Insertion UM Program 2888 Continued DIMS Interface Software (Phase II) 1718 Continued the NDI Adaptation Phase for the RSCCE 4573 Initiated development of the Replacement Batson 1800 Initiated development of the Integrated Baseband Workstation (IBWS) 560 Developed the specification and acquisition requirements package for the Common Network Planning Software (CNPS) 1734 Continued IRF and SETA efforts Total 15833 <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> 403 Complete the NDI Adaptation Phase for the RSCCE 4038 Continue DIMS Interface Software (Phase III) 4555 Continue the RBATSON program 1900 Complete the IBWS program 559 Complete the specification and acquisition requirements package for the Common Network Planning Software(CNPS) program

FY 1999 Planned Program:

• 700 Complete the RBATSON program

• 3300 Continue the DIMS Interface Software program

• 3850 Initiate the CNPS program

• 6000 Develop prototype microwave link from Kaiserslautern through Donnersburg to Heidelberg Germany as per agreement between Program Manager, Defense Communications and Army Transmission Systems and Defense Information Systems Agency

• 2310 Continue IRF and SETA efforts

Total 16160

B. Project Change Summary

	FY 1997	FY 1998	FY 1999
FY 1998/1999 President's Budget	16510	14890	11610
Appropriated Value	17063	14890	
Adjustments to Appropriated Value	-1230	-573	
FY 1999 President's Budget	15833	14317	16160

Change Summary Explanation:

Funding: FY 1999 (+4550) funding adjustment represents an increase to support CINC and US Army Europe transmission requirements(+6000) and realignment to higher priority requirements (-1450).

Schedule: FY98 CNPS contract award delayed until FY99 due to budget reductions leading to a program restructure based on Defense Information Systems Agency(DISA) prioritization

A. Mission Description and Budget Item Justification: Project D384 - SMART-T: The Secure Mobile Anti-Jam Reliable Tactical Terminal (SMART-T) will provide a range extension capability for the Army's Mobile Subscriber Equipment (MSE) to support the Force Projection Army. Specifically, it will provide a satellite interface to permit uninterrupted communications as our advancing forces move beyond the line-of-sight capability of MSE. This equipment will communicate at both low and medium data rates (LDR/MDR) over the MILSTAR satellite constellation. It will also be compatible with the UHF Follow-On (UFO); the Navy FleetSatcom EHF satellite package; and MIL-STD-1582B/C compatible payloads. It will provide the security, mobility, and anti-jam capability required to defeat the threat and satisfy the critical need as stated above. The SMART-T will also have Low Probability of Interception and Low Probability of Detection (LPI/LPD) to avoid being targeted for destruction, jamming or intercept. The prime mover will be a High Mobility Multi-Purpose Wheeled Vehicle (HMMWV) configured with all the electronics and the self-erectable antenna.

Acquisition Strategy: The SMART-T program employed a competitive development strategy. The development phase included two contractors performing under Cost-Plus-Incentive-Fee (CPIF) contracts. The contracts were awarded on 9 Nov 92 to Raytheon Company (Marlborough, MA) and Rockwell International (Richardson, TX). Twelve Engineering Development Model (EDM) terminals (6 from each contractor) were developed under the two contracts. The streamlining features of this phase included a reliability growth plan to achieve the required reliability by Follow-On Test and Evaluation (FOT&E). Both Low Rate Initial Production (LRIP) and Full Rate Production (FRP) were competitively awarded to Raytheon Company on 7 Feb 96 under a single contract based upon the development contract effort and LRIP/FRP proposals. The Project Management Office elected to defer discrete development initiatives until after down select for greater cost efficiency. A SMART-T Milestone III Decision will be conducted prior to exercising the first FRP Option in FY 99. The total Army terminal requirement is 209, of which 43 will be procured during LRIP (base year plus one option) to ensure sufficient quantities are available for the launch of the first MDR satellite in FY 99. The Air Force will also be procuring 9 terminals during LRIP. The Full Rate Production (FRP) quantities (166 Army terminals) will be awarded as fixed price options to the LRIP/FRP contract following Milestone III approval. Additional quantities (i.e., 95) will be procured for the Air Force, Marine Corps, and JCSE.

FY 1997 Accomplishments:

- 10335 Continued development of Network Control, Demand Assigned Multiple Access, Payload Specification Changes and C4I Technical Architecture
- 3530 Continued development of interactive training courseware
- 1864 Conducted Terminal Test with Lincoln Labs MDR Simulator
- Total 15729

	COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost	
D386 SCAMP Block I		985	2705	0	0	0	0	0	0	100354	
<p>A. Mission Description and Budget Item Justification: Project D386 - SCAMP: The SCAMP Block I Terminal will provide four simultaneous channel full duplex data, half duplex voice communications at 2400 bits per second (bps) each in a 37 pound manportable configuration. These satellite terminals are to be employed by units that require range extension for command and control communications. Block I will provide priority tactical ground users with the capability to transmit and receive intelligence, command, and control traffic from a base station. It will transmit in the Extremely High Frequency (EHF) band and receive in the Super High Frequency (SHF) band. It will provide Low Data Rate (LDR) secure voice at 2400 bps and secure data at 75-2400 bps, as well as interface with Common Hardware/Software devices such as the Lightweight Computer Units and the Hand-Held Terminal Unit. The SCAMP BLK I will be fully interoperable within the Army C4I Technical Architecture. The terminal will have embedded COMSEC and TRANSEC with set-up and teardown in less than 10 minutes. In addition to operation on MILSTAR satellites, the SCAMP BLK I will operate on all satellites which utilize the MIL-STD-1582C/D LDR waveform. It will be required to operate in environmental conditions that include smoke, aerosol, rain, fog, snow, haze and dust, and must operate in the transmit, receive or stand-by mode throughout an entire mission (typically 30 days). SCAMP Block I is the first EHF manportable terminal and provides direct support to the tactical warfighter mobile forces with greater anti-jam protection, lower probability of intercept, and lower probability of detection.</p> <p>Acquisition Strategy: The Block I development phase initially included two competing contractors performing under Cost-Plus-Incentive-Fee (CPIF) which was competitively awarded in Sep 92. Based upon unexpected cost growth of both contractors and the lack of government affordability to retain two, an early determination was made to Terminate for Convenience the Lockheed Corporation contract on 16 Sep 93. A Market Survey was conducted in Jun 94 in which five vendors participated. On 26 Oct 94, the AAE restructured the SCAMP Block I program and the Martin Marietta Corporation contract was Terminated for Convenience. A Milestone III Decision for a competitive full-scale production buy (quantity of 312 multi-service terminals) was approved on 15 Nov 94. An Advanced Planning Briefing to Industry was held at Fort Monmouth, New Jersey, on 29 Nov 94. On 7 Apr 95, the SCAMP Block I was redesignated an ACAT III program. Team Fort Monmouth awarded the SCAMP Block I Firm Fixed Price Production Contract to Rockwell Collins Inc, Richardson, Texas, on 23 Feb 96. Engineering Feasibility Efforts (EFE) to develop the objective terminal in the range of 12-15 pounds was approved in the Acquisition Decision Memorandum to begin in FY 96 through FY 99. These efforts provide confidence in technical approach and lead to Milestone II Engineering/Manufacturing Development (EMD) Phase for the objective system. The SCAMP Block II effort previously funded in this PE is restructured to PE 0603856A, Project D389 beginning in FY 97.</p> <p>FY 1997 Accomplishments Program:</p> <ul style="list-style-type: none"> 748 Conducted System level tests 237 Initiated/completed UHF Follow-On (UFO), Fleetsat EHF Package (FEP) Control Planning Tools Total 985

D455	MILSTAR EDM Terminal	857	0	0	0	0	0	0	0	299901																				
<p>A. Mission Description and Budget Item Justification: Project D455 - MILSTAR EDM Terminal (MET): These EHF MILSTAR Engineering Development Model (EDM) terminals will be utilized as test assets to support satellite payload tests. They will also reduce risk in the Secure Mobile Anti-Jam Reliable Tactical Terminal (SMART-T) and Single Channel Anti-Jam Manportable (SCAMP) terminal development process. The terminals are capable of providing mobile, survivable, anti-jam, low probability-of-intercept communications from an S-250 shelter mounted on a Common Utility Cargo Vehicle (CUCV) truck towing a trailer with generator.</p> <p>Acquisition Strategy: A single Full-Scale Engineering Development (FSED) contract was awarded in Mar 85 to develop and produce 15 FSED terminals. Magnavox Electronic Systems Company received the award. A sole source production contract was to be executed in Nov 92; however, due to the changed world situation, no production buy was required. The MET will be used for SCAMP and SMART-T contractor risk reduction tests and satellite payload tests.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> 857 Continued Government and Contractor support of testing with SCAMP and SMART-T to reduce risk <p>Total 857</p> <p>FY 1998 Planned Program: Project not funded in FY 1998</p> <p>FY 1999 Planned Program: Project not funded in FY 1999</p> <p>B. D456 Milsatcom System Engineering	4127	3934	4131	4735	4972	4986	5015	Continuing	Continuing

A. Mission Description and Budget Item Justification: Project D456 - Milsatcom System Engineering: . As Executive Agent for MILSATCOM Ground Subsystems, Army is responsible for developing, procuring, and maintaining the life cycle logistics support for satellite terminals; satellite control subsystems; communications subsystems; and all related equipment required to achieve end-to-end connectivity to satisfy JCS Command, Control, Communications, and Intelligence (C3I) supporting the President; JCS; CINCs; Military Departments; Department of State; and other Departments and Agencies of the government. This project provides centralized funding for advanced systems engineering, analysis, research, development, test, and evaluation of new and emerging technologies that optimize terminal performance and interoperability on the digitized battlefield.

Acquisition Strategy: This project funds advanced systems engineering, research, development, test and evaluation of new and emerging technologies to enhance terminal performance and optimize communications control. Once the technologies are mature and deemed feasible, funding and management responsibility for implementation of the technology is transitioned to cognizant Milsatcom programs.

FY 1997 Accomplishments:

- 1360 Continued Spitfire 5KHz DAMA Waveform Improvement
- 1458 Completed government and contractor support of SHF Tri-Band Advanced Range Extension Terminal (STAR-T)
- 714 Continued developments and conducted field tests for SATCOM-on-the-Move initiatives (formerly SCATS)
- 595 Battlefield Digitization integration efforts
- Total 4127

FY 1998 Planned Program:

- 450 Continue Spitfire DAMA Waveform Improvement
- 1100 Initiate Spitfire software remoting capability development
- 320 Complete various SATCOM on the Move analysis, acquisition, and test efforts
- 750 Battlefield Digitization integration efforts
- 1215 Advanced SATCOM architecture development
- 99 Small Business Innovative Research/Small Business Technology Transfer Programs(SBIR/STTR)
- Total 3934

D559 Automated Communications Management System (ACMS)	0	9391	8342	6196	8606	0	0	0	32535
<p>A. Mission Description and Budget Item Justification: Project D559 - ACMS: The Air Force funded the ACMS from FY93-FY95. All Services (USAF, Army, and Navy) are funding for their unique software and hardware requirements. ACMS is critical to the dynamic and efficient operation of battlefield command and control networks using Air Force developed MILSTAR satellites and Army developed MILSTAR terminals. ACMS enables Army users to take advantage of advanced features of the MILSTAR system, to include directly tasking the satellite constellation, repointing payload antennas, and rapidly changing network configurations. ACMS is not a new start. The Army initiated participation in FY96 under project D384. The ACMS must be integrated into ISYSCON to make it available to the tactical user and to coordinate MILSTAR range extension of MILSTAR networks.</p> <p>Acquisition Strategy: ACMS is not a new start. Development efforts were initiated in FY96 under D384 and D386. The D559 ACMS Development funding line was newly created in FY98. ACMS is a Joint Service MILSTAR community initiative which is an integral part of the MILSATCOM Architecture. The Milstar Joint Program Office (MJPO) is managing the overall development effort. Input and interaction with the terminal offices is required to ensure a comprehensive system solution is achieved. Development work began in FY96 and will continue through FY01, as ACMS is phased in and tested incrementally.</p> <p>FY 1997 Planned Program: Efforts funded in Project D384, PE 0303142A</p> <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> • 7985 Begins integration, test and fielding of incremental builds • 650 Participates in MILSTAR Intersegment Test (MST6000) • 420 Participates in Joint Technical Reviews, Management Reviews, Technical Interchange Meetings, and Technical Demonstrations • 336 Small Business Innovative Research/Small Business Technology Transfer Programs(SBIR/STTR) Total 9391 <p>FY 1999 Planned Program:</p> <ul style="list-style-type: none"> • 7322 Continues integration, test and fielding of incremental builds • 600 Participates in MILSTAR Intersegment Test (MST8000) • 420 Participates in Joint Technical Reviews, Management Reviews, Technical Interchange Meetings, and Technical Demonstrations Total 8342

Change Summary Explanation:

Funding: FY 1998 (-4000) Army reprogramming to support critical digitization requirements and (-427) undistributed Congressional reduction.

FY 1999 (+4441) Increase funds continuation of integration, test, and fielding of incremental builds. These efforts were originally budgeted in FY 1998 but have been rephased to FY 1999 to free up funds for digitization.

DC86 Army Global Command and Control System		18877	14581	17543	9526	14633	14473	13476	12176	115285

A. Mission Description and Budget Item Justification: Project DC86 - AGCCS: This project is the Army component system that directly supports the implementation of the Joint Global Command and Control System (GCCS). This support is being accomplished through the Army's Global Command and Control System (AGCCS), which is a selection of the Army's best-of-breed command and control functionality. The AGCCS-developed software systems will dramatically improve the Army's ability to analyze courses of action; develop and manage Army Forces supporting joint war plans; and ensure that the Army portions of war plans are feasible. The AGCCS will provide a layered architecture and functional best-of-breed software applications to develop a totally integrated component of the GCCS. This project involves the development, enhancement and integration of software functionality that currently exists within the Army's inventory or is currently under development and is therefore appropriately included in Budget Activity 7.

Acquisition Strategy: The AGCCS software integration and development effort is a five year incrementally funded completion effort. A hybrid (Cost-Plus-Award Fee and Firm-Fixed-Price) contract was awarded to Lockheed Martin Corporation (LMC) in December 1994. The contract consists of software development, software maintenance and relocation/de-installation of the test facility upon completion of the contract. Based on the priority of achieving WWMCS shutoff and replacing the system with the GCCS/AGCCS, the remaining software integration and development effort that was originally scheduled as Capability Packages 1 through 10 deliveries was restructured. PM STCCS established an Integrated Process Team (IPT) to review the status of the remaining software integration and development functional deliveries. The results of the IPT were instituted providing the users of AGCCS, five mission support software deliveries identified as Capability Package 1 (CPI), and Deliveries 1 through 4. CPI, which was delivered in 2QFY96 and designated IOC in 4QFY96, provided the replacement for the AWIS strategic mission support applications/software and the Army's GCCS interface to selected HQDA, and FORSCOM sites. Deliveries 1 through 4, which will be delivered throughout the remainder of the LMC contract, will provide the integration of selected STACCS, TACCIMS, and CSSCS Echelons Above Corps (EAC) mission support applications/software into the CPI baseline. Deliveries 1 through 4 are scheduled to be delivered to 18 Army sites located throughout the world. A common hardware platform will be used within the Army to implement AGCCS/GCCS. This will include products from the Army's Common Hardware/Software-2 (CHS-2) contract, which consists of Commercial Off The Shelf (COTS) hardware and software. The COTS hardware and software will provide computers with expanded processing, storage and communications capability, as well as office-automation and management software.

<p>A. Mission Description and Budget Item Justification: The Joint Precision Approach Landing System (JPALS) is a precision approach and landing system providing joint operational capability for U.S. forces assigned to conventional and special operation missions operating from fixed base, ship, tactical and austere environments. The effort will develop methodology to incorporate JPALS into aircraft while considering aircraft environment, electrical power, system space, weight, antenna placement and electromagnetic compatibility without nullifying low observable capability requirements. The project in this Program Element supports research efforts in the engineering and manufacturing development phase of the acquisition strategy and is, therefore, correctly placed in Budget Activity 7.</p> <p>Acquisition Strategy: The acquisition strategy is to support the joint research and development project leading to production of a joint system.</p> <p>FY 1997 Accomplishments: Project not funded in FY 97</p> <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> 710 Support JPALS research and development efforts. 18 Small Business Innovative Research/Small Business Technology Transfer (SBIR/STTR) <p>Total 728</p> <p>FY 1999 Planned Program: Project not funded in FY 99</p> <p>B. H12	Intelligence Support to Force XXI	464	484	950	942	933	948	964	0	5673	
<p>A. Mission Description and Budget Item Justification: This program element provides funding to develop Proof of Concepts to define fundamental capabilities and limitations of Focused Intelligence XXI technologies which supports Force XXI. Focused Intelligence addresses the functional areas of Situational Awareness, Information Management, and Predictive Analysis. This requires a comprehensive understanding of the following seven critical technologies when integrated into live, virtual or constructive environments. These critical technology areas include: Displays (public, cockpit and heads-up), computer hardware capable of high speed analytical and graphical processing, computer software for distributed tactical or simulation environments (including tools such as Knowledge Based Reasoning and Artificial Intelligence), networks which link tactical and high speed wide area capabilities (utilizing Asynchronous Transfer Mode (ATM), Synchronous Optical Net (SONET), and multi-level security capabilities) throughout all echelons, sensors for real-time information of the battlefield throughout the electromagnetic spectrum, the Dynamic Visualization Databases for live or synthetic environment (including terrain, features, texture, images, weather, environment, entities and units as a minimum), and the Automatic Target Recognition (ATR) and Assisted Target Recognition (AATR) for timeline reductions. This project supports development of new operational concept efforts in the Focused Intelligence arena and is therefore appropriately funded in Budget Activity 7.</p> <p>Acquisition Strategy: Utilize existing INSCOM and the Defense Advanced Research Project Agency contracts to obtain hardware and software integration support. Major integrated Proofs of Concepts, with U.S. Forces Korea and the 18th Airborne Corps (101st Airborne Division and 525th Military Intelligence Brigade) as the user, will occur on a quarterly basis. Major milestones in FY97 are XVIII ABC exercises (June 1997 and September 1997) and Division XXI AWE (November 1997).</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> 125 Focused Intelligence Proofs of Concepts during USFK FOAL EAGLE Exercise, November 1996 on situational awareness applications 264 Focused Intelligence Proofs of Concepts with USFK ULCHI FOCUS LENS Exercise, July/August 1997, emphasis on situational awareness information operations predictive analysis and information management 75 Transition USFK Proofs of Concepts into Force XXI train-up, September 1997, with applications emphasizing Blue Force support Total 464 <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> 472 Expand Proofs of Concepts vertically to Divisions with quarterly integration tests 12 Small Business Innovative Research/Small Business Technology Transfer Programs Total 484 <p>FY 1999 Planned Program:</p> <ul style="list-style-type: none"> 950 Transition technology horizontally to Corps/Divisions continuing Proofs of Concept test with quarterly integration tests Total 950

BUDGET ACTIVITY		PE NUMBER AND TITLE								PROJECT	
7 - Operational System Development		0305204A Tactical Unmanned Aerial Vehicles								D114	
COST (In Thousands)		FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost	
D114 Tactical Unmanned Aerial Vehicles		0	0	75636	4000	4476	5500	5241	Continuing	Continuing	
<p>A. Mission Description and Budget Item Justification The Tactical Unmanned Aerial Vehicle (TUAV), "Outrider", provides Army brigades/battalions, USMC regiments/battalions, and Navy forces with dedicated day/night, reconnaissance, surveillance and target acquisition (RSTA) and intelligence. Outrider provides the tactical warfighting commander with critical battlefield information in the rapid cycle time required for success at the tactical level. The Joint Requirements Oversight Council (JROC) reassessed warfighter UAV priorities and reconfirmed the TUAV as the JROC's top UAV priority to meet Service requirements in JROCM 173-96, Unmanned Aerial Vehicles, 12 November 1996. The Outrider Advanced Concept Technology Demonstration (ACTD) system consist of four air vehicles, each configured with an electro-optic (EO)/infrared (IR) sensor payload, ground control equipment, including communications equipment and launch and recovery equipment, remote video terminal, two HMMWV's and a trailer, and one mobile maintenance facility for every three TUAV systems. The TUAV ACTD provides for the placement of systems in the hands of the operational users as quickly as possible for use in demonstrations and exercises. The ACTD process provides users with the opportunity to assess the military utility of the system thereby becoming informed buyers and applying lessons learned while evolving system requirement</p> <p>Acquisition Strategy: The TUAV ACTD contract was competitively awarded with industry being advised of the possibility of follow-on production buys should the ACTD system demonstrate a military utility. The ACTD contract has an option for six (6) LRIP systems. The Outrider LRIP options supports a Full Rate Production (FRP) decision. The ACTD will address Joint Services (Army, Navy, Marine Corps) tactical UAV requirements and will validate military utility for each Service. The TUAV program will employ "cost as an independent variable" in acquiring any follow-on systems.</p> <p>FY 1997 Accomplishments: FY97 efforts were funded under Program Element 0305154D (Tactical UAV's Defense-Wide)</p> <p>FY 1998 Planned Program: FY98 efforts are funded under Program Element 0603003A (Aviation Advanced Technology).</p> <p>FY 1999 Planned Program:</p> <ul style="list-style-type: none"> • 75636 - Evaluate and execute MUA users lessons learned <ul style="list-style-type: none"> - Bridge Gap between ACTD & LRIP (ie. Documentation, AV Improvements, Weight Reduction) - Continue CARS Integration and Demonstration - 2 Systems for Land & Sea CONOPS Development (ie. NTC rotation) - Award LRIP contract - Transition to a formal acquisition program and begin OT&E <p>Total 75636</p>

Mission Description and Budget Item Justification: Expanding regional power threats require an evolutionary improvement program to maintain the effects of the Multiple Launch Rocket System (MLRS). This Product Improvement Program (PIP) provides for the Engineering and Manufacturing Development of an Extended Range Rocket (ER-MLRS), Improved Fire Control System (IFCS), Improved Launcher Mechanical System (ILMS), Guided MLRS Rocket (GMLRS), Joint Technical Architecture-Army (JTA-A) (formerly designated MLRS Army Technical Architecture), High Mobility Artillery Rocket System (HIMARS), and MLRS Smart Tactical Rocket (MSTAR). The ER-MLRS project will enhance the capability of the existing MLRS by providing improvements in range, accuracy, effectiveness, and maneuver force safety. The IFCS corrects present and future supportability problems resulting from electronic component obsolescence in the existing design. The ILMS, by decreasing the slow to aim point timeline, will increase responsiveness, improve survivability, and enhance effectiveness in countering surface to surface missile fire. The GMLRS will greatly enhance the capability of the ER-MLRS by providing greater range and significantly enhanced accuracy. The improvement in accuracy and range will reduce the number of rockets required to defeat targets, thus dramatically reducing the logistics burden, and will increase crew survivability. The JTA-A will implement dual protocol capability and Force XXI Situational Awareness in M270A1 launchers and trainers. HIMARS will allow MLRS capability to be C-130 transportable by mounting one rocket or missile pod on a 5-ton truck. It gives early entry forces immediate fire support within a hot landing zone without waiting for heavy-lift aircraft. The MSTAR will be a guided MLRS rocket carrying terminally guided smart submunitions that will detect, classify, and engage stationary or moving armored and other high valued targets. These projects support development of upgrades to current production vehicles and are appropriately funded in Budget Activity 7.

RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)										DATE	February 1998
BUDGET ACTIVITY		PE NUMBER AND TITLE								PROJECT	
7 - Operational System Development		0603778A Multiple Launch Rocket System Product Improvement Program								D027	
COST (in Thousands)		FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost	
D027	MLRS ILMS	25724	17842	0	0	0	0	0	0	66732	
<p>A. Mission Description and Budget Item Justification: Project D027 - Improved Launcher Mechanical System (ILMS): This project provides for the Engineering and Manufacturing Development (EMD) of the ILMS. The ILMS will decrease the stow to aim point timeline, enhance effectiveness in engaging and supporting the force, and increase MLRS platform survivability. The ILMS will replace selected hydraulic and mechanical components of the MLRS M270 launcher mechanical drive system. The time required for movement of the Launcher Loader Module from the stowed position to first rocket away will be reduced from 93 seconds to 16 seconds. Reload operations for twelve rockets will be reduced from 260 seconds to 160 seconds. These improvements will allow faster engagement of short dwell time targets and increase crew survivability on the firing point and reload area. Reduced operation and support costs are expected with this design. When combined with the Improved Fire Control System, the launcher will be designated as M270A1.</p> <p>Acquisition Strategy: This is an ACAT III program with an EMD phase ending in 3QFY99 and fielding beginning in FY 00. A sole source contract for EMD was awarded to Lockheed Martin Vought Systems (LMVS) in August 1995.</p> <p>FY 1997 Planned Program:</p> <ul style="list-style-type: none"> • 22110 Software Development Qualification, Hardware Delivery, Qualification Testing • 125 System Integration • 1075 Government Furnished Equipment Launcher Modifications • 2414 Minor Tasks Including In-House Total 25724 <p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> • 11235 System Integration/ Testing • 2997 Government Test Support • 2863 Minor Tasks Including In-House • 300 Government Furnished Equipment Launcher Modifications • 447 Small Business Innovative Research/Small Business Technology Transfer Programs Total 17842 <p>FY 1999 Planned Program: Project not funded in FY 1999</p>

BUDGET ACTIVITY		PE NUMBER AND TITLE								PROJECT	
7 - Operational System Development		0603778A Multiple Launch Rocket System Product Improvement Program								D050	
COST (In Thousands)		FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost	
D050	IMP FIRE CONT SYS-IFCS	25592	0	0	0	0	0	0	0	140149	
<p>A. Mission Description and Budget Item Justification: Project D050 - Improved Fire Control System (IFCS): The current MLRS Fire Control System provides position data, communication interface through which fire missions are received, processes data, controls the launcher, inputs mission critical data to the weapons and fires the weapon. This project provides for the Engineering and Manufacturing Development (EMD) of an IFCS, which will correct present and future supportability problems resulting from electronic component obsolescence in the existing design. This effort will result in reduced operation and support costs due to addition of built-in test equipment (BITE) to the circuit card and cable level and will provide growth capabilities for existing and future MLRS Family of Munitions (MFOM) weapon systems.</p> <p>Acquisition Strategy: IFCS is an ACAT III program with an EMD phase ending in 2QFY98 and fielding beginning in FY 00. A sole source contract was awarded to Lockheed Martin Vought Systems (LMVS) in September 1992. Sole source was determined necessary due to the integration of the IFCS into the existing MLRS design, and due to the mechanical, electrical, and software interface with all rockets, missiles, and munitions utilizing the MLRS launcher. It is essential that the source be responsible for systems and perform the interface/design efforts for integrating the IFCS into the MFOM. The MLRS, as an internationally co-developed and co-produced system, must have computer software with common application to be utilized by the sponsor countries.</p> <p>FY 1997 Planned Program:</p> <ul style="list-style-type: none"> • 20940 System Integration Tests, Flight Tests, Extended System Integration Tests • 1000 EMD Contract Award Fee • 450 White Sands Missile Range (WSMR) Test & Software • 250 Fire Control Panel Trainer (FCPT)/Maintenance Trainer • 2952 Minor Tasks Including In-House Total 25592 <p>FY 1998 Planned Program: Project not funded in FY 1998</p> <p>FY 1999 Planned Program: Project not funded in FY 1999</p>

COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
D054 EXTENDED RANGE ROCKET	10405	0	0	0	0	0	0	0	84804

A. Mission Description and Budget Item Justification: Project D054 - Extended Range MLRS (ER-MLRS): This project provides for the Engineering and Manufacturing Development (EMD) of an ER-MLRS. The ER-MLRS will enhance the capability of the existing MLRS by providing improvements in range, accuracy, effectiveness, and maneuver force safety.

Acquisition Strategy: The ER-MLRS acquisition strategy is a streamlined product improvement program which permitted entering Low Rate Initial Production (LRIP) (funded with Missile Procurement) and subsequent Full-Scale Production after completion of a 54-month EMD program. The primary objective of the EMD phase was to develop and qualify a successor rocket to the MLRS basic M26 with extended range capability and with minimum impact on existing basic MLRS companion hardware and software. This effort incorporated the results of other development efforts for a new submunition with a self-destruct fuze to reduce the hazards to friendly maneuver dud rate and for a no-load detent system to sustain accuracy at increased ranges. The acquisition alternative most advantageous to the Government was for a sole source EMD contract to the system prime contractor, Lockheed Martin Vought Systems (LMVS), containing a requirement to increase subcontract competition for subsystems and components.

FY 1997 Planned Program:

- 3346 Software Integration & Test
- 3009 Fuze Development
- 1619 Software IV&V Testing and Audits
- 2431 Minor Tasks Including In-House and Milestone Decision Review III Preparation
- Total 10405

FY 1998 Planned Program: Project not funded in FY 1998

FY 1999 Planned Program: Project not funded in FY 1999

D093 MLRS JOINT TECHNICAL ARCHITECTURE-ARMY	0	825	2425	2043	1642	7932	6041	0	20908

A. Mission Description and Budget Item Justification: Project D093 - MLRS Joint Technical Architecture - Army (JTA-A): MLRS JTA-A will integrate the Force XXI/JTA-A mandated 188-220A protocol and convert existing MLRS fire support messages to Variable Message Format (VMF) for M270A1 launchers. JTA-A hardware and software development effort will implement Force XXI situational awareness and JTA-A soldier-computer interface mandates for M270A1 launchers. Increased Force XXI capabilities include addition of a digitized map, tactical internet connectivity, and situational awareness.

Acquisition Strategy: The JTA-A standards will be implemented for the M270A1 launcher to perform the Force XXI capabilities. The M270A1 FCS will implement software reuse and OTS hardware to the maximum extent possible within hardware capabilities and M270A1 operational requirements.

FY 1997 Planned Program: Project not funded in FY 1997

FY 1998 Planned Program:

- 704 Developed New Communication Interface

Mission Description and Budget Item Justification: This program element comprises four projects: Manufacturing Technology (ManTech); Weapon Systems Modernization Software Maintenance; Reliability, Maintainability and Sustainability; and the National Defense Center for Environmental Excellence (NDC EE). The goal of the Army ManTech program is to provide essential manufacturing technologies that will enable the affordable production and sustainment of future weapon systems. Objectives include development of advanced manufacturing processes, equipment and systems; enhancement in quality while achieving reduction in cost of Army materiel; and transferring improved manufacturing technologies to the industrial base. The ManTech program is especially important in the current environment because of the large decline in weapon system production investments since much manufacturing technology was formerly accomplished within individual production programs. Projects selected to be funded under this program have the potential for high payoff across the spectrum of Army weapon systems as well as significant impact on national manufacturing issues and the U.S. industrial base. The Weapon Systems Modernization Software Maintenance project provides funding for modernization programs in which post-production embedded weapon system software must be upgraded and/or enhanced, as well as life cycle software engineering in the areas of tactical and satellite communications, intelligence and electronic warfare (IEW), avionics command and control (C2), fire support (FS), maneuver control (MC), and tactical fusion (TF). The work performed in project DE26 was formerly funded in the Operations and Maintenance, Army appropriation. The mission and associated funding for all software maintenance that provides performance enhancements and upgrades to weapons systems were transferred to the RDT&E, Army appropriation in FY 1998 in accordance with the criteria set forth in DOD 7000.14-R Financial Management Regulation, Volume 2A, Budget Presentation and Formulation, Chapter 1 Guidance. Beginning in FY1999, based on the determination of Headquarters, Department of the Army and the Deputy Chief of Staff for Operations and Plans requirements process, the funding for DE26 has been distributed into the appropriate RDT&E accounts of those specific systems requiring performance enhancements and upgrades in software. The Reliability, Maintainability and Sustainability (RM&S) program funds projects that reduce the cost of ownership through weapon system or equipment modifications to yield improvements in RM&S. Projects were evaluated for funding based on recognized principles of economic analysis, including the use of Savings-to-Investment analysis. The National Defense Center for Environmental Excellence (NDC EE) Technology is a Congressionally directed project which has the mission to demonstrate and export new

<p>A. Mission Description and Justification: The goal of the Army Manufacturing Technology (ManTech) Program is to provide essential manufacturing technologies that will enable the affordable production and sustainment of future weapon systems. Objectives include development of advanced manufacturing processes, equipment and systems; enhancement in quality while achieving reduction in cost of Army materiel; and transferring improved manufacturing technologies to the industrial base. The ManTech program is especially important in the current environment because of the large decline in weapon system production investments since much manufacturing technology was formerly accomplished within individual production programs. Projects selected to be funded under this program have the potential for high payoff across the spectrum of Army weapon systems as well as significant impact on national manufacturing issues and the U.S. industrial base.</p> <p>This project is assigned to Budget Activity 7 since it supports the development of processes in technological feasibility assessment, weapon systems in development or production, and modifications/upgrades to or sustainment of fielded systems.</p> <p>Acquisition Strategy: The Army ManTech program is currently undergoing a major revision in which there will be significantly fewer projects (and contracts) of less than \$300K than in the past. It is anticipated that future ManTech initiatives will require contracts of greater dollar value, focused on making more significant impact on affordability of weapon systems. The ManTech program uses firm fixed price contracts, cooperative research and development agreements, cost sharing arrangements, and utilization of DoD manufacturing centers of excellence to complete tasks.</p> <p>FY 1997 Accomplishments:</p> <ul style="list-style-type: none"> 6796 - Air Vehicles: Demonstrated low-cost Beryllium Aluminum investment casting process reducing machining time by 60% on the Comanche electro-optical sensor system; demonstrated co-cure process for composites with application to the Longbow Apache mast mounted assembly resulting in 15% weight reduction in radar mast assembly and demonstrated low cost fabrication and tooling technique for helicopter secondary structures; operated full scale factory for gear manufacturing technology and established a government, industry and academia coalition to solve manufacturing problems through an Instrumented Factory for Gears Center (INFAC) to reduce manufacturing costs by 15% and cycle times by 90%. 2535 - Ground Vehicles: Weld joints were developed for simulating a titanium turret design, which was used for evaluating the performance of the weld joints and performance of titanium in a turret box design; demonstrated affordability of composite armored vehicle technology to include manufacturing process flow and production feasibility summary with upper hull technology concept adopted by PM Crusader; developed demonstration articles utilizing ductile iron for vehicle track shoes for extended track life.

<p>FY 1998 Planned Program:</p> <ul style="list-style-type: none"> - Fiscal year 1998 began a transition year for the ManTech Program. During FY97 the Army decided to restructure the program to focus more pointedly on those manufacturing technology objectives that promise to make significant impact on reducing the cost of future weapon systems. Under the new strategy, there will be fewer of the small ManTech contracts previously found supporting broad-based commodity area objectives. Replacing these will be major objective-based projects (\$1M to \$3M per year for duration of three to five years) selected by Army leadership for their potential to increase affordability of multiple systems in development or in the field. Full implementation of the revised program will occur in FY99. Projects other than the initiative on sensors described below, either will be brought to conclusion or incorporated in FY99 major focused ManTech initiatives. - Initiate the first phase of a five year major effort to develop the manufacturing technologies required for cooled and uncooled infrared staring sensors to include process development in uncooled and cooled focal plane arrays (FPAs) and improvements in infrared optics manufacturing. Goals are to replace costly uncooled FPA sensors with significantly less expensive uncooled versions in as many weapon systems as possible and to make significant advances in the manufacturing technology that will make cooled FPAs more affordable for those systems requiring the highest level of sensitivity and resolution. - Ground Vehicles: A box design will be tested against ballistic threats at ARL Weapon Technology Directorate at Aberdeen Proving Grounds and the titanium welding processes will be established for enabling the capability to manufacture titanium turrets that weigh 20% less than conventional turrets. - Air Vehicles: For the Instrumented Factory for Gears, continue development of improved heat treatment processing, conduct final demonstration of prediction and control of heat treat distortion of gears, demonstrate automated deburring of spiral bevel gears and demonstrate digital optical-based inspection system for gears; continue development and demonstration of improved airframe manufacturing technology using composite manufacturing processes for helicopter dynamic rotor components; develop a prototype universal static balance system for helicopter main rotor blades; develop heat curing blanket for CH-47 and UH-60 main rotor blade leading edge surfaces at Corpus Christi Army Depot. - Missiles: Develop and implement Computer-Aided Design/Computer-Aided Engineering (CAD/CAE) millimeter-wave (MMW) design tools for at least one Army missile system; continue development of manufacturing process and testing improvements for multi-chip modules; complete development of advanced integrated product and process design aides and simulation systems for missiles; and continue cost reduction process improvements to traveling wave tube manufacturing; strengthen U.S. printed circuit board industry and its ability to support military needs through an Electronic Circuit Board Manufacturing Development Center. - Electronics: Complete process improvements to the mid and mid-to-high performance focal plane array dewar assembly. - Munitions: Continue processing technology development for pyrotechnic materials, optimize process parameters for manufacture of fine particle explosives and coated energetics, and complete process development efforts for Modular Artillery Charge System (MACS); continue manufacturing development of the Objective Individual Combat Weapon System; prototype and prove out a second generation CNC machine for Magnetorheological Finishing (MRF) of optics and precise correction of non-symmetric errors; apply deterministic optics fabrication techniques to specific military optics

COST (In Thousands)	FY 1997 Actual	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	Cost to Complete	Total Cost
DE26 Weapon Systems Modernization Software Maintenance	0	32269	0	0	0	0	0	0	32269

A. Mission Description and Justification: The Weapon Systems Modernization Software Maintenance project provides funding for modernization efforts in which post-production embedded weapon system software must be upgraded and/or enhanced. This project provides life cycle software engineering support for weapon systems in the areas of tactical and satellite communications, intelligence and electronic warfare (IEW), avionics command and control (C2), fire support (FS), maneuver control (MC), and tactical fusion (TF). The project provides the capability to enhance or improve system software interoperability, integration and testing for command, control, communications, computer, intelligence, electronic warfare, and sensor (C4IEWS) functions in a continuous life cycle evaluation/certification process. Software changes funded under this project expands or upgrades the performance of the selected weapon systems, as well as ensure system interoperability. The project is managed by the Army Materiel Command (AMC). Prior to FY 1998 the work performed in project DE26 was funded in the Operations and Maintenance, Army appropriation. The mission and associated funding for all software maintenance that provides performance enhancements and upgrades to weapons systems were transferred to the RDT&E, Army appropriation in FY 1998 in accordance with the criteria set forth in DOD 7000.14-R Financial Management Regulation, Volume 2A, Budget Presentation and Formulation, Chapter 1 Guidance. Beginning in FY 1999, based on the determination of Headquarters, Department of the Army and the Deputy Chief of Staff for Operations and Plans requirements process, the funding for DE26 has been distributed into the appropriate RDT&E accounts of those specific systems requiring performance enhancements and upgrades in software.

This project is assigned to Budget Activity 7 since it supports the development of processes in technological feasibility assessment, weapon systems in development or production, and modifications/upgrades to, or sustainment of, fielded systems.

FY1997 Accomplishments: Program not funded in FY 1997

FY 1998 Planned Program:

- 31460 - Modify fire support command and control system software to accommodate new munitions and or doctrine.
- Modify navigation and position reporting weapon system software to accommodate changes in mapping reference grids supplied by the National Imagery and Mapping Agency (NIMA).
- Modify terrain dependent weapon system software platforms to accommodate changes in electronic terrain data supplied by the NIMA.
- Modify software and/or databases in selected weapons systems to identify and defeat new, different, or re-deployed electronic threats employed by adversaries in particular regions of the world, such as laser or radar engagement systems used by enemy munitions and missiles, or communications jammers

DE31	National Defense Center for Environmental Excellence (NDCEE)	0	0	5000	0	0	0	0	0	5000	
<p>A. Mission Description and Justification: This Congressionally mandated project is managed by the Army on behalf of the Office of the Deputy Under Secretary of Defense for Environmental Security (DUSD-ES). The mission of the NDCEE is four-fold: (1) Demonstrate and export new environmentally-acceptable technology to the industrial base; (2) train the industrial base on the use of the new technology; (3) perform research and development, where necessary, to mature a new technology prior to demonstrating and exporting the new technology to the industrial base and (4) assist DoD in technology transfer. The NDCEE, which is located in Johnstown, Pennsylvania, has the goal of resolving the environmental technology and management requirements of the DoD community and commercial industrial base. The primary in-house development agency is the U.S. Army Materiel Command's Armament Research, Development, and Engineering Center, Picatinny Arsenal, NJ.</p> <p>The NDCEE has positioned itself as a critical resource for the Deputy Under Secretary of Defense for Environmental Security for environmental management and technology validation and integration. Major programs supported by the Center include the Joint Group on Acquisition Pollution Prevention, Toxics Reduction Investment & Management (TRIM), environmental cost accounting standards development supporting the DOD sustainment community and the DoD fuel cell program. Beginning in FY 1999, this program is restructured from PE0602720A to this PE.</p> <p>FY 1997 Accomplishments: Program funded in PE060270A.</p> <p>FY 1998 Planned Program: Program funded in PE0602720A.</p> <p>FY 1999 Planned Program:</p> <ul style="list-style-type: none"> 5000 - Continue support of Army/DOD pollution prevention needs.; assist Joint Logistic Commanders in use of Joint Group for Acquisition Pollution Prevention (JG-APP) methodology to aid depots. - Maintain Environmental Technology Facility and continue demonstration of environmentally acceptable technologies on DOD components and conduct technology transfer activities (requirements determination, technology selection, equipment selection, installation, de-bugging, training) for DoD facilities. - Ensure overall DOD/Army needs are addressed in execution of reimbursable projects (DOE/EPA/others). - Support Pollution Prevention efforts in acquisition through development of joint test protocols, multi-service needs identification, regulatory analysis and prediction, environmental cost analyses, risk assessments, life cycle environmental assessments and incorporation of environmental management standards and principals.

A. Mission Description and Budget Item Justification: The United States is a major participant in a cooperative venture to select and procure a ground surveillance capability for NATO forces. Initial efforts to evaluate various potential solution sets for the NATO Alliance Ground Surveillance System (NAGS) commenced in May 1995. A NAGS Project Office was established at SHAPE Technical Center (STC) and will continue to operate until the final NAGS configuration is selected. Under this PE/Project, the Army will conduct and support interoperability experimentation and demonstrations between the Joint Surveillance Target Attack Radar System (Joint STARS) Ground Station and various Allied weapon systems. This is not a new start, but a continuation of the effort previously funded under PE 0604770A. This effort is in support of upgrades for NATO International Activities and appropriately placed in Budget Activity 7.

Acquisition Strategy: These funds are to be used for Architectural Design Study and interoperability demonstrations with the US CGS systems involving the principle NATO participants. All hardware has been procured (FY 96).

FY 1997 Accomplishments: Project not funded in FY 97

FY 1998 Planned Program:

- 6377 NATO Architectural Design Study
- 3280 Continue Support of NATO Interoperability Demonstrations and Experimentation at (NC3A)
- 240 Program Support
- 328 Small Business Innovative Research/Small Business Technology Transfer Programs
- Total 10225

FY 1999 Planned Program:

- 3850 Develop NATO directed interfaces and AGS Capabilities
- 600 Complete tests and demonstrations
- 1705 Support Allied/NATO exercises
- 250 Program Support
- Total 6405
